I think WABC's demise was inevitable. Even if it had not become a
mostly-disco station, it was getting fierce competition from WKTU and
WBLS.

I've been reading this group for quite a while and learning things about the radio industry but I still don't get some things so I thought I'd give my thanks in advance and ask you:

1. What's the justification for call letters?

2. What's the justification for the station IDs at the top of the hour, and why was the top of the hour chosen?

3. What's the justification for the City of License, anyway? Does the C.o.L. necessarily have *anything* to do with the radio station, other than being a place to fill in a blank? Does the COL have something to do with the initial antenna location?

Examples of why I'm asking:

WQMF 95.7 FM
Studios: Louisville, KY
C.o.L.: Jeffersonville, IN
Antenna Location: in Indiana, just south of New Albany between IN 11 and IN 111, across the Ohio River from Valley Station. Was the original stick located in Jeffersonville?

WFPK 91.9 FM
Studios: Louisville, KY
C.o.L.: Louisville, KY
Antenna Location: Floyd Knobs, IN (popular location for sticks) Is the stick over by the main branch of the Louisville Free Public Library at 3rd and York the original one?

>Cassettes are looked down upon...especially by todays snooty,
>know-it-all, cookie cutter PDs!!! Just send the CD and don't bother
>with the cassette.

Hmmm...first of all, the good PDs (the kind you want to work for) aren't like that. They'll worry about content first.

Second, they don't mind either kind of recording format. They have access to both kinds of playback in office and studio, so that's not a factor. Cassettes even have one big advantage...more folks have cassette decks in their cars, including PDs, and they often like to listen to an audition tape in the car while headed to or from work or lunch. Gives 'em a sense of what you will be like and whether you can hold their attention in the kind of environment where close to half of radio listening is done. CD sounds great, no question...but it might not be the most convenient way for every PD to hear you.

So each station has a unique identifier. Most countries around the world require stations to carry a unique call sign.
"K" and "W" as the first letter identify it as a United States station.

> 2. What's the justification for the station IDs at the top of the
> hour, and why was the top of the hour chosen?
>

So people (and the FCC) can determine what station they're listening to and where it is. And they know when the station will identify. The top of the hour was probably just arbitrary, but it's easier to remember to do and enforce than, say, 21 minutes after the hour. It's also easier for the authorities and listeners to find out what the station is if they ID at the top of the hour.

> 3. What's the justification for the City of License, anyway? Does

> something to do with the initial antenna location?
>
> Examples of why I'm asking

<snip>

First of all, one of the things to keep in mind (and what a lot of the people in here don't want you to know) is that the airwaves are not "owned" by the broadcast licensees. They are in the public domain, and a broadcasting license is a privilege extended to the broadcaster to use a part of the spectrum for a finite period of time. It can be revoked through due process or reassigned when the license term expires if someone else can prove they'd do a better job than the current licensee. Example - if a license holder commits a felony, he could lose the license if the FCC feels he's unfit to be a broadcaster. And if a licensee can't keep the station going and it goes silent for a year, the license can go up for grabs again.

A broadcast station is supposed to serve its community -- and the city of license used to refer to the community that the station was intended to serve. In other words, a Jeffersonville station would have been expected to provide news coverage

and public service to Jeffersonville and the communities around Jeffersonville, even though the station could be heard in Louisville.

In recent years, however, the FCC has greatly relaxed community service requirements. In the past, a Jeffersonville station would have to provide on its license application and renewal forms some details as to how they would serve their city of license. Examples - coverage of Jeffersonville news, local elections, school closings, and time given to religious and civic groups.

Since the relaxation of public service requirements, a lot of stations run as what are derisively called "rimshots". Their COLs can be immediately adjacent to a major city, or even 35 miles from the major city, and they operate as a station in the major city, even though they're somewhere else. Up here in the greater Boston area, where there are many large satellite cities with their own radio stations, many of those stations run as Boston rimshots -- and their only identifiers to their COL are the id at the top of the hour. They're supposed to provide some service geared to the communities they're licensed for, but as I said, it has become somewhat of a joke.

However there are still certain requirements. A station has to keep what is called its "public file" (comments from listeners about the station, FCC actions against the station, etc.) somewhere in the city of license and make it available for public inspection at reasonable times. The primary transmitted signal contour must physically be over the city of license and the studios, by nature must be very close to the city of license because the studio must be within the station's primary signal strength area. But neither the studios nor the transmitter have to be in the city of license.

Without having data for WQMF on hand, I would guess that the primary transmitted signal contour is over Jeffersonville, or is at least stronger in Jeff than it is in Louisville. There is probably a public file somewhere in Jeffersonville for WQMF. During throwaway time (pre-dawn or Sunday morning) you may actually hear public service announcements or community forums that are specifically aimed at Jeffersonville. And, hypothetically, the good folks in Jeffersonville might raise a stink at license renewal time if the station's owners made certain pledges to Jeffersonville and didn't follow through, although as I said, the FCC is rather lax on that these days.

The COL concept is still important. Since a station must still identify itself with the COL, there is still a connection with the city, regardless of how a station decides to operate commercially. And also, if there were competing applications for a license, the winning applicant probably had to make some pledges of local service to the community in and surrounding the city of license. And should there someday be a challenge for the license, the FCC might consider service to the COL as a factor in determining who wins.

A lot of stations would love to ditch the id and COL requirements, but they can't.

Finally, in this willy-nilly atmosphere of consolidation and mass ownership of radio stations, the major broadcasting conglomerates would rather own stations in and around the major cities instead of buying a rimshot 40 or 50 miles from the center of town. This makes it difficult but not impossible for an FM station

licensed to a town 50 miles from a major city to convince someone in a corporate boardroom that it's actually a station in that major city. This makes stations in Boston more valuable properties than, say, a station in a remote town whose signal may get into Boston.

I'm just a layman -- but others in here will probably fill in more info.

Darren Stuart Embry wrote:
> 1. What's the justification for call letters?

Today, mostly tradition and a way for the FCC to keep track of which station is which. Originally, in the days when all radio used Morse Code it would take too long to send "This is Shore Radio Wilmington". (besides, how do you know whether it's Wilmington, North Carolina or Wlimington, Delaware?) Sending "WDEL" is a lot faster and unambigious. Since the FCC keeps track of radio stations by their call letters, they're likely to exist for years to come.

> 2. What's the justification for the station IDs at the top of the
> hour, and why was the top of the hour chosen?

To allow listeners and FCC inspectors to know who to complain to if the station does something wrong. Actually today the inspectors know darn well who they're listening to without the ID - the listeners don't but so many legal IDs are illegible so it doesn't do them much good either!

The ID used to be required at the bottom of the hour too. My understanding is that it still is in Mexico. On the other hand, Canada only requires station IDs once a *day*. And many other countries don't have call letters (and thus don't have station IDs, at least not in the U.S. sense) at all.

I suppose the FCC could just as well have chosen 37 minutes after the hour as the mandated time for the ID. IDs at the top of the hour were least likely to interrupt programs back in the old days when radio *had* programs<g>.

> 3. What's the justification for the City of License, anyway? Does
> the C.o.L. necessarily have *anything* to do with the radio station,
> other than being a place to fill in a blank? Does the COL have
> something to do with the initial antenna location?

The only thing the antenna location has to do with the COL is that it must be close enough to that city to provide a "city grade" (very strong) signal across that city with the power allotted to that station. Often, that location *was* originally in the COL - probably because many FM stations started with much lower powers than they use today, and had to be closer to provide that strong signal!

The station's main studio used to have to be in the limits of the COL, and it had to provide regular public-interest programming for the citizens of that city. The station could *only* give the name of the COL with the legal ID, unless it had special permission from the FCC.

("WWTN Manchester-Nashville" was NOT a legal ID unless the station had special permission to add "Nashville") Most of that has been repealed. My understanding is that stations are still required to:

1. Prepare a list of issues facing the COL and list programming aired addressing those issues. (these are generally the boring talk shows that air on music stations early Sunday mornings...)

2. Provide a city-grade signal across the COL.

3. Maintain a "public file" - a file containing correspondance from listeners and various documents filed with the FCC - at a location in the COL.

4. Provide a telephone number for contacting the station which is toll-free in the COL.

If those requirements are met, the station's studio, offices, and transmitter can all be in another city - or even another state. (one of many examples: the former WJZC 101.1 (they've changed calls) licensed to Russellville, Kentucky. The transmitter is in eastern Robertson County, Tennessee, and the offices and studios are both on Music Row in Nashville.)

The antenna location has more to do with the COL as the antanna must be sited to provide acceptable service to the COL.

The COL was the licensee's choice, although that choice cannot be arbitrary in the case of frequencies assigned by the "table method", as FM and TV are (or were).

AMs are (and were) assigned by a completely different method, the "demand allocation" method, meaning the first to demand (and receive) an allocation got it.

AFAIK, none of the initial TV or FM allocations were allocated by "demand".

It seemed apparent that KGB 101.5 listeners in Long Beach were upset enough
about a religious translator out of Mt. Wilson on 101.5 to get the ball
rolling by contacting KGB. The operator of the religious translator shut it
down some days later.
I wish the FCC would take the radio signal contours of the major stations
in the U.S. and bordering countries into consideration when assigning
frequencies to LPFM broadcasters, which, like the 101.5 Los Angeles translator
I mentioned, could upset the folks who regularily listen to their favorite
radio station some 120 miles out and/or show up in the Arbitrons.
The Mexican broadcaster on 90.7 interfering with KPFK in Los Angeles,
unfortunately, is more complicated than that, and it's up to the SCT of Mexico
to correct this error that has upset a lot of people in San Diego who are
missing Radio Pacifica's programming.

For Hot Country 99.3 trying to beat longtime country favorite KSON 97.3, a
LPFMer on 99.3 in Escondido (I can get 99.3 up there) would certainly affect
their listener count. Of course, they can also get The Frog 92.9 just up north
in Temecula in many places.

Mexico building a LPFM 101.5 staiton in TJ? How many KGB listeners who
live in TJ and commute to San Diego listen at home? Apparently, enough to be a
significant factor.

And they will as Clear Channel, owner of KGB, did with that 101.5 Los Angeles 2-watt translator. 2-watts! When up on top of Mt. Wilson, those 2 watts make all the difference whether they can listen to classic rock or classic hymns. I've heard complaints via e-mail when listeners in Long Beach and Orange were wondering why KGB flipped to religious music.

Darren Stuart Embry asked:
>>>1. What's the justification for call letters?<<<

Greg and Joan replied:
>>So each station has a unique identifier.<<

Peter added:
>Licensee's choice (of call letters beyond the regionally mandated K or W
>prefix), except for "historical" stations that had their call letters
>assigned by the "table" method.<

Darren, some of those call letters have been in continuous service since 1920. Others have leap-frogged around, or been recycled endless times. But in case you're interested, here's a website that lists many actual (or highly plausible) explanations for call letters whose symbolism might be lost with either distance, or passage of time:

2753. Misunderstanding what LPFM Means

Newsgroup: rec.radio.broadcasting
Date: 2000-07-07 00:00:00 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <805bms0855htv4cg634kpb3dgvm7fa44s3@4ax.com>
Source record: 18809

There has been a lot of misunderstanding about LPFMs as indicated by the postings on USENET.

It isn't about whether the LPFM's are interfering with a stronger co-channel station residing in its immediate area some 120 miles away, rather, it's whether the DXers, who listen to the distant station some 120 miles away, could be affected when the LPFM's start broadcasting on the channels of their favorite out of town radio stations.

Some have taken the task to generalize my findings about LPFM interference with the big broadcasters. Again, they better think again. This is on a case-by-case basis, and not an umbrella finding against anything one way or another. Who stands to lose if an LPFM steps on your favorite out of town station? You, the radio listener, that's who.

If radio listeners in Long Beach want to listen to a San Diego radio station on 101.5 playing recycled classic rock tunes and unfunny morning show hosts without any interference from the LPFM stations, they have every darn right to do so.

Again, big business has no stake in my report; they have nothing to do with what I write about. I am an independent who is fighting for the radio listeners' rights to enjoy radio with as minimal interference as possible.

I mentioned radios with poor adjacent-channel filtering earlier. When will we get some kind of radio tuning quality-ratings system going on radios that are sold in the U.S.? I'd like to know how well they can receive a radio station with ratings on "Sensitivity", which tells you how well it can pick up relatively weak or distant stations, and "Selectivity (alternate and adjacent)", which tells you how well the tuner can filter out nearby radio stations.

From my experience, the bedside clock radios with a wire for an FM antenna is the worst when it comes to sensitivity and selectivity. Portable radios are a step above with a swiveling antenna, but they're pretty bad on selectivity, and some are bad at sensitivity as well. Home tuners are better for picking up weaker and adjacent channels. Car radios, being optimized for traveling, fare the best in the selectivity and sensitivity factors of their tuners.

When shopping for a tuner, be sure to pick the kind of radio tuner that suits your listening needs whatever it's for local or distant listening. Be sure to ask for the FM tuner specifications for the home and car radios where possible.

A Brand-New Low Power San Diego TV Station!

KCBQ-AM 1170 talk show host Raul Larry Contreras, who hosts his own radio show from 11:30am-1pm Sundays, has
started a new local talk show...on a local TV station.

K61GH channel 61, with its transmitters just east of Poway, is a new low power independent channel that is best received in
Poway, but Santee and northwest El Cajoners can pick it up, as well as some in Escondido.

His new two-hour TV talk show is taped in a studio in downtown San Diego.

10 Leadership Day

This Saturday, July 8th, Oldies 94.9 and KSON Country 97.3 are presenting "10 Leadership Day 2000" sponsored by San
Diego Work Force Partnership.

Join them from 10:00am-3:00pm at Qualcomm Stadium. Come by and get information on affordable housing, childcare, health
insurance, car safety seat checks, debt relief, cooking demonstrations, a career festival and more.

Free food, live entertainment and lots of family fun! Additional details on the KGTV web site at http://www.kgtv.com

NBC 7/39 Blood Drive 2000

Jammin Z-90 says they are the only station helping out the community! Please see the above news blurt about 10 Leadership
Day.

Anyway, Z-90 teams up with NBC 7/39 for the "2000 NBC 7/39 Blood Drive" today, July 7th from 1:30pm - 6:30pm at the
KNSD studios, 8330 Engineer Road in Kearny Mesa.

There will be free prizes for eligible blood donors,

New Emily CD Out July 25th

From http://www.histar.com/djs/jeff_jer/jeff_jer_main.shtml

Check out the Jeff and Jer on Star page for a sneak peek at the cover of Emily's new CD "Be That Way."

Emily went to New York and signed with Universal Music at 2:10pm Friday June 9, 2000. "Be That Way" the album will be
released nationwide on July 25th!!!

Read the whole story of Emily at Emily's web site.

Treading the Other San Diego Radio News Sites

Ken Leighton - San Diego Reader - Who Cares?

John Fox - San Diego Radio Digest http://www.radiodigest.com/sandiego/2000/ -
Memories Shared in B-100 Reunion,
XJAZZ/KSDS Briefs

Randy Dotinga - North County Times http://www.nctimes.com/preview/radio.html -
Women still tackling gender barrier on
radio dial,

Ken Leighton Not an Interesting Radio Writer?

A few recent radio dirt pieces by Ken Leighton in the San Diego Reader and a humane Randy Dotinga piece on Becky's
House prompted a letter by Star employee Tommy Sablan to write a letter to the North County Times thanking Randy Dotinga
("Static" radio column, June 23) in recognizing Becky's House and how STAR 100.7 listeners made this happen for victims of
domestic violence in San Diego.

Randy mentioned that "Thereas a writer in town named Ken Leighton (San Diego Reader) who continues to write
noninteresting things going on in radio. Thanks to Randy for writing about something that listeners and readers want to know
about what's important."

I wrote Tommy recently:

Ken Leighton writing non-interesting things about radio. I wonder if he'll be writing about the Darva Conger appearance on
Star in the near future? That would be of interest, I suppose.

One letter writer wrote why Ken never wrote an article about the then-hot topic Rick "Skippy" Rockwell. What about Emily?
That's another interesting topic connected with radio I'd like to read more about.

I have yet to read anything about radio that isn't in the "tabloid" nature such as a story about the overrated KGB morning man
having a tirade over yours truly rag piece (from last September). What did that solve. Nothing.

I for one like to read about innovations in radio such as how LPFM will affect us the radio listener and how the Internet is
changing the way people listen to radio among others. Ken is way out of the groove and is stuck in the 80's with the kinds of
stories he's authoring that has little or no interest to the average radio listener except for the radio big wigs and tabloids.

And Randy wrote back: "Thanks for your email. Ken is very upset at my letter about him. I have always been fair to that guy, but he continues to publicly try to "hang me" out to dry. I don't know what's up with him. I agree with you."

I've also gotten e-mails from some other radio people questioning Ken Leighton's reporting style as they claim to leave out quotes from them in his articles.

A morning deejay (who shall remain anonymous) was complaining that Ken was touting that Sets was beating KGB in some North County ratings period. He explains that, and I quote, "KGB billed near 10 million dollars in advertising revenue. That's a stat that Sets would gladly trade their precious, non - meaning north county rating for. Trust me. Ask them. If they disagree, they're either stupid or liars."

One other broadcaster I emailed wondered how Ken could find more interest in the Star vs. KGB over Rick Rockwell than interest in writing about Rick Rockwell's "stunt" on Star itself?

Another writer (anonymous by request) says that Ken has been taking up the task in bending the truth so that the station initiating the stunt on another competeting station looks worse than what actually happened. In this case: 91X vs. The Flash when it was simply a "sticker stunt" where people representing 91X plastered The Flash van with 91X stickers all over. The more violent parts Ken wrote about, as stated by a letter from Bryan Jones, was not initiated by 91X but by someone else. We'll never know who the someone else was, but it was wrong for Ken to speculate who the person who broke some windows at The Flash was.

So there you have it. Accuracy or bending of the truth? You make the call!

KJOY 94.1's Top Six at 6 Time Machine

Monday - Friday at 6pm, KJOY 94.1 counts down the top six songs on a particular date in music history. The charts may come from Billboard Publications, but that's my guess.

For example: yesterday, KJOY played the Top Six Songs For The Week Ending July 6, 1981. What happened in 1981? Well, the baseball players were on strike, the air traffic controllers were threating to strike, and I was out of a job. MTV had less than a month to premiere and change the skyline of Top 40 radio. Daytimers were flocking to see the adventures of Luke and Laura and Scorpio in a quest to defeat the evil Mikos Cassadine and his cold weather machine on General Hospital. Showtime went 24 hours a day, the first entertainment cable network to do so, and we were watching a younger Jane Leeves in those Aerobicise shorts after several movies. The Greatest American Hero was flopping all over the air. Atari 2600 VCS and Pac-Man were video game giants. And people were watching Indiana Jones at the

movie theaters, a year after seeing Harrison
Ford in The Empire Strikes Back.

The Top 6 of 7/6/81?

6. "The Theme From The Greatest American Hero" - Joey Scarsbury
5. "Stars on 45" - Stars on 45
4. "You Make My Dreams" - Hall and Oates
3. "The One That You Love" - Air Supply
2. "All Those Years Ago" - George Harrison
1. "Bette Davis Eyes" - Kim Carnes

Z-90 Needs New Needles

During their noontime "Grub 'n Groove" mix, their vinyl records (yes, they play the mixes live) repeated the same vinyl groove
over and over again during "Do Me Baby" and "Bust a Move". I guess the record couldn't bust a move out of that groove.

The mixing deejay must have eaten something and had bad indegestion, the announcer jokes.

House of Z Returns

San Diegans who have missed the local weekly house mix show have reason to cheer.

Jammin Z-90 is bringing back the "House of Z" late Saturday/early Sunday from 2am-4am. Just a month ago, Channel 933
debuted the taped "Digital Groove" house mix show airing from 1am-3am.

Heard on The Planet

"Classic Hits of the 70's, 80's, and 60's, without all that other junk!"

"You don't have to sit through all the bad songs to hear your favorites!"

Speaking of Bad Songs - What's With Star and 91X?

Do I have to listen through No Doubt's awful punker "Ex Girlfriend" on Star and 91X? Fool if you think it's cool. It sounds like
someone having indigestion problems!

The way Star is programming bad songs, or sleepy country crossover junk, I might as well give the #1 preset to The Planet at
this rate!

As for 91X, I had to listen through three bad songs in a row: Nirvana, that No Doubt song above, and Cake's depressing "You
Turn The Screws." This is an improvement for 91X? Last year, they often played four bad songs in a row.

It's getting harder to find a radio station in town I can keep tuned in all day without putting me to sleep, depressing me, or
making me want to take a life. Can't anyone program a station like Hip Hitz FM

or something like it in town?

Best Station to Listen To on the 4th

Surprise. It's Star 98.7 out of Los Angeles where they played a mixture of
80's resurrection hits. Best song to cruise to: Con
Can's "I Beg Your Pardon" with sampling from Lynn Anderson's "Rose Garden"

Runner up: Star 100.7's Erik Estrada 80's barbecue. Wonder if they'll get Mr.
T sometime. "I pity the fool who plays bad
songs!" Mr. T should tell Star!

Disclaimer, Etc.

David Tanny just might replace Star and 91X's presets with KIFM and KYXY if
they keep playing that blasted No Doubt
song! Tanny's "Today in All Kinds of History" is used by some stations owned
by Jefferson-Pilot Communications among
others. Please judge any possible bias or conflicts of interest accordingly.
Please direct your news scoops to Dave at

Sorry, that was settled when FM allocations were based the "CBS Single Market Plan" back in the late 1940s. Further compounded by 80-90 which established many lower power classifications to limit coverage to the protected primary areas and turned fringe areas into interference zones. IBOC FM digital may further increase first adjacent-channel interference.

Not going to be done by any government body in the USA. "Let the marketplace decide" is the government moto. Why don't you complain to Consumers' Union, etc.? IIRC, some industry body set up measurement meathods, you're just asking for some outfit to spend the [big] sums required to do the testing and publication.

*** snip ***

If the majority of the US population can't follow the instructions to program a VCR, what use would radio specs be to them? You'd like them, I'd like them, but what good would they be to the other 99+ percent of the population?

As an aside, the original ICOM 706 amateur radio tuned the FM broadcast band in addition to ham bands. It had absolutely horrible intermod and other various faults in the FM band. Much worse than any clock radio. ICOM eventually sent me two more to try out, but they were all just as bad. I hope their newer versions are better in this respect.

I noted that the ads for the European version 706 did NOT mention coverage of the FM broadcast band. I suspect that some European countries have standards for minimum performnace of an FM broadcast receiver that the old 706 couldn't meet.

Maybe we should all look for the "CE" mark on things we buy;-) That claims that the product meets all applicable European standards. Seriously, this wouldn't help for digitally-tuned AM/FM radios since their AM band uses 9-kHz steps, not our 10-kHz steps.

hey

This is Cat. Kurt Wise...aka the Wiseguy is on the air at the
moment...and I'm totally new to this group, but since I'm also
a dj here, I thought I would say hi...or "hey" as they do here
in Sweden. So far the experience is awesome.
I'm from New York...West Village to be exact :)
Visby is very much like the East End of Long Island, in terms of
the vibe...but it's not the Hamptons.
The Medieval architecture....storybook homes and breathtaking views
are amazing here. The work...well, yes, we're working hard-- 4 hour
air shifts each day, trying to learn the language, and helping out at
the club when we can, avoiding getting lost on the winding cobblestone
roads and making it up as we go along. (well, not really)
I'm VERY green as a dj, so I'm not sure what details you're interested
in, but I can tell you that people here love ROR because the music
we're playing is a fun and unpredictable departure from the the music
played at other Swedish stations. I affectionately call the "studio"
the fishbowl...passersby on the street can tap on the glass and make
funny faces...only they don't seem to be dropping in any food!
oh yeah, the food here in Visby rocks too! Not what I'm used to in
NYC, but change is good, right?
It's very cool to be part things at ground zero.
If only I could see my Empire State Bldg. from here....

I believe they are required by international treaty, altho many nations seem to ignore them. Station identification is needed to pick out a station operating incorrectly, (harmonics, parasitics, overmodulation, etc.) which interfere with other signals==Ted

I would add that the format of ROR is very diverse to say the least.
Tom calls it "wide AC" but we play artists like KISS, AC/DC, Elvis,
Shania Twain, Billy Idol, Roxette, Savage Garden, Bee Gees, Louie
Armstrong

it is kind of like Armed Forces radio, a very full service format.

We play sweedish artists too, Robyn, Louise Hoffsten, etc.

Kat and I will keep posting in here

Yes, as far as I can tell, that is the original stick, although for the past couple of years it has only served to hold our STL dish to microwave the signal to the Knobs. Now that we have moved to our new studios it is no longer needed and I believe that the Library has plans to have it dismantled.

I sure theese oldies stations would get some more records to play. I might have to buy them some. They don't have but 50 if that many.

If I was a music director of an oldies station, you would be lucky to hear the same song in a month. Bet I would have bunches of listeners, they probably wouldn't go to sleep wondering what the next song would be.

They are doing that here in Griffin, georgia on 88.9, you just have to
listen a while, and they might run some add about every couple of hours.

Bet you would have NO listeners. I was just involved in an oldies format shift, going form about 2000 titles to 400. The station went from absolute last to #1 20-54 in a market with a population in excess of 15 million and nearly 60 radio stations. People don't want to hear songs from "way back when"but, rather, their favorite songs (today) form that era. Not every past hit is a hit now; not every so-called hit form the past was really a hit.

2768. Repealing the "ACT of '96" Clarified...

Newsgroup: rec.radio.broadcasting
Date: 2000-07-08 00:00:00 UTC
From: Broadcast Services <hawkfm@peoplescom.net>
Message-ID: <vTx95.103181$5k2.219055@dfw-read.news.verio.net>
Source record: 18824

I realized that I had miscommunicated my intentions after posting this message (call it "a momentary lapse of control of the fingers"). What I had INTENDED by this post was more along the lines of "Let's petition for a reinstatement of some 'basic' rules..." which would make the current corporate establishment WISH that the "Act of '96" had been repealed. These corporate radio monsters would quake in their boots if they thought for an instant that there'd be a return to anything even remotely resembling our former "regulated" environment! We might even begin to see "voluntary divestiture"... Imagine how you'd feel if YOU owned eight or ten businesses and found out that, instead of having one semi-knowledgeable employee babysit all of them that you'd actually be REQUIRED to have a "minimal staff to provide required services" available at all times!
This IS entirely possible with enough support! I mean, we DID just watch the NAB stamp their feet like so many crybabies over a reduction in THIRD adjacent channel protection while many of THEM operate translators at 2.5 times the power on SECOND adjacent channels... WITH NO COMPLAINTS OF INTERFERENCE!!! (Or, perhaps they have petitioned God for a waiver...)

Marketplace? If that is the case, then Oxley must think "Marketplace"
means who he owes favors to. Mike has never shown anything for the
people, just what is in his own best interest.

.... and another message .....

> This IS entirely possible with enough support! I mean, we DID just watch
>the NAB stamp their feet like so many crybabies over a reduction in THIRD
>adjacent channel protection while many of THEM operate translators at 2.5
>times the power on SECOND adjacent channels... WITH NO COMPLAINTS OF
>INTERFERENCE!!! (Or, perhaps they have petitioned God for a waiver...)

The NAB is protecting it's tail. The members fear LPFM from a program
standpoint, and not a technical issue. The fact that the NAB produced a
lame CD, (that was a staged), tells me they are desperate. It amazes me
that the NAB with all their assets could not do what some of us have done,
which is to take measurements and perform factual studies.

Case in point is one LPFM channel where I live. The co-channel
interference would go out about 3 - 5 miles. Ratings report that the high
power station does not show up till 40 miles from the LPFM. Using a 100 mW
transmitter, and adjusting the field strengths for what it would be at 100
watts, the LPFM would be well into the noise floor at 5 - 7 miles. One cry
is that propagation would cause these LPFM stations to "skip" into the
primary station zone. However, in 30 years of FM DXing, I've never seen a
creditable report of a Class-D or translator skipping in and ruining
service. Additionally, three of us as an experiment called 300 households
to see if anyone listens to the stations on co-channel, 1st adjacent, and
2nd adjacent. No surprise, nobody heard of the stations we mentioned.
They listened to the "LOCAL" stations.

In an argument, anyone can bring up a theory. I've heard that "LPFM
stations will cause interference". Have we seen any factual numbers on
this, or is it just an opinion. I've heard that "LPFM stations can't be
trusted. They will change their frequencies and over modulate." Oh
really? A guilty charge before the crime. Actually, in monitoring this
past year for grins, I've counted 143 rule violations of stations in my
area and documented through other members of our radio club. To me this is
like a man charging a woman with rape before he assaults her!

Just keep four things in mind when you spew your thoughts about LPFM and what it will do. 1) You would not want to be accused of a crime if you have done no wrong. 2) If you are doing what is right for your community, you have nothing to fear. Your job is safe. 3) If people are unsure you're an idiot, don't toss out some lame post and confirm it for them. Make sure your facts are facts, with solid evidence and historical electronic theory. Oh... 4) I know a talk show guy coined this phrase, but when Congress or the NAB talk about something"follow the money trail!" In the case of Oxley, you can see why he voted the way he did. <grin>

That's all I have to say on this entire issue.

OK maybe I wasn't clear enough on a previous response ---

The communications acts state that radio stations, and that the spectrum will be managed for the "public interest, convenience, and necessity" - I forget which order.
But the FCC is supposed to determine what the public interest, convenience and necessity is, and manage the frequency allocations and licensing accordingly.

Whether you agree with the LPFM implementation or not, most are in agreement that broadcast FM is a local and limited-region service.

The argument you are giving against LPFM - that you don't like your local choices of programming and prefer to listen to far-away stations -- is roughly the SAME argument that the pro-LPFM side is giving -- that they don't like their local choices of programming and would like to have more variety and diversification of local stuff and that LPFM is necessary.

If you like to listen to DX, there are alternatives. One is AM-MW. The other is shortwave. FM, by its nature, is not for DX and the FCC has always played this factor into allocations and will do so with LPFM.

>...If I was a music director of an oldies station, you would be lucky to hear
>the same song in a month. Bet I would have bunches of listeners, they
>probably wouldn't go to sleep wondering what the next song would be...

Now I ain't no mathematical genius, but lets do some math..
If you play 12 songs an hour, times 24 hours a day that would be 288 songs per day. (it would probably be more because most songs were less than 3 minutes long until the early 70's). Now there are 30 days in a month, so 30 times 288 equals 8,640.
So in order to not play a song more than once a month would require a music library of over 8,000 songs.
The average oldies station has a music library of 1000 songs; so they would have to go deeper than the 1000 tested titles that hit the top 20 on Billboards Hot 100. In fact, if you played every song that hit the top 40, that would amount to about 20,000 titles (using figures in Joel Whitburn's Top 40 Hits, with a little math of my own). However this includes songs up to 1992 (I have an old copy of Joel's book), so we would have to eliminate about half of these titles because you won't want to play songs past 1980, so let's divide the 20,000 by two and you get 10,000.

The bottom line: If you didn't repeat a title in 30 days, you would be playing every song that hit the Top 30 on Billboard's Hot 100 from 1954 to 1980, including Trade Martin's "That Stranger Used to Be My Girl" (#28 Nov '62) and Stonebolt's "I Will Still Love You" (#29, Sept '78) and so on...
Hey, I'm as sick of Diana Ross & The Supremes as the next guy, but research shows that the average listener wants to hear Diana Ross, and whenever Oldies Stations start to increase their playlists, they start to decrease their ratings. People want to hear familiar stuff, not stiffs from 1965.

So, I doubt if your station would lead to an increase in sales for Sominex for listeners waiting up to see what song is next.. The only ones using Sominex will be the owners wondering why they can't make any money.

Stations have not played "only" 50 records since the days of Top 40 when lowly AM stations like WABC got cumes of over 4 million playing 35 to 40 different songs. Clearly, everyone wanted more songs.

Hmmm...it seems to me that people did get tired of hearing the *same* 35 or 40 songs over and over again -- after all, it's not like WABC played the same songs month after month, year after year. Their playlist was updated regularly and songs replaced or retired as they burned out.

For that matter, didn't WABC play some gold along with their currents?

>

Originally, the top 40's featured exactly that: 40 hits. Maybe 2 or 3 new songs a week (which is about what any sane station limits itself to today) and a gold or two in the format's second decade.

Very little has really changed in radio, except for the increase in gold or library to formats. What has changed is that peoples tastes have fragmented into groups. Top 40 stations were known to have 50+ shares in the 50's... because there was great commonality in the music tastes of the nation. Now every 5-year-wide demo has a different favorite music style, multiplied by every ethnic and psychographic mutation that comes along. And one result of all this is that there is a considerable number of folks who don't find any broadcast offering to their taste, opting instead for alternative distribution of entertainment.

I have "DMX" here on the cable, and they are starting to fall in the same rut as the oldies stations. They might have 75 songs in there play list. You have more channels to choose from though.

There's a chicken-and-egg argument here, but I tend to think the
fragmentation is the result of the proliferation of stations. As time
went by it became more profitable to narrowly target and "super-serve"
small segments of the population, rather than spend big bucks on an
often-futile effort to keep a mass audience. This is one reason why
the more stations there are, the more the medium as a whole is
perceived to have deteriorated. Whereas 30 years ago you might have
found two or three stations you liked at least some of the time, now
you're lucky to find one--and if you're in certain less-desirable
demographic groups, no station is tailored to your tastes. (As I tell
my octogenarian parents, I'm not surprised they don't like radio any
more--none of it is meant for them anyway).

Very true, and another example of the workings of the law of
unintended consequences.

I wonder if this could have anything to do with the reported declines in
radio listening through most of the nineties? I also wonder what it
would take to snag some of these listeners back?

> Unless they're running as a rimshot LA-wannabee,

They really don't, although I have heard people from parts of LA call them (it's about a
50-60 mile trip between Oxnard and LA) KCAQ-Oxnard can be heard as far east as Whittier, though not with a real good signal.

The three or four pirate stations that used to hang out on 104.7 all got shut down by the
FCC a few years ago. It was a big mess anyway, unless you were right under the transmitter, you'd hear a mishmash of stations, and given a good temperature inversion, Oxnard might boom on in and stomp on everyone anyway....

Have you listened to MOYL?? Most of the time it centers on the 1950s and 60s, and has essentially nothing from the 30s and very little from the 40s. IMO, MOYL aims at the 54-60/65 age group. It includes enough early light rock to turn away even people at the upper end of that range. I imagine that more rock will appear as they aim at the boomers entering "their" target age group.

I know of no service that specializes in Classic (not Classical) American music, the music of the very late 20s through some time in the late 40s - with some suitable earlier content, and quite a bit more recent - especially show tunes.

Non-com WKHR(FM) in Bainbridge (Cleveland), Ohio, plays what I'm talking about, as does WMKV(FM), a non-com in a Cincinnati suburb.

I think you're reinforcing my point that the station, while its signal may get into LA, was not intended to be a Los Angeles station, and from what you're telling me, it's not even trying to be a rimshot.

We have situations here in the greater Boston area, where a lot of suburban stations, even some AMers, some as far as 40 miles from Boston, are attempting rimshot operation. Most recently, WCCM(AM) in Lawrence (1000 w daytime, reduced power at night) has been identifying itself as "Lawrence-Boston" although after dark its signal doesn't go far, and the station is about as "local" (Lowell-Lawrence-Haverhill) in flavor as you could possibly get.

Hmmm you have a point there. It sounds old to me (age 49) but I do find that it has some 50s and 60s in it.

There are stations with big band formats, however, but that appeals more to the 70ish group.

Octogenarians? I agree, there isn't much out there. Then again, octogenarians don't compose a large segment of our society (and even less of an economic segment).

That doesn't sound quite kosher...at least as I understand the rules.
You're allowed to mention who the underwriter is, where he/she/it does
business, what kind of business in general terms they do, how long they've been
doing it, and if they're opening a new location...but if you get into price
comparisons, qualitative assertions, or any of the things most spots do, you
are over the line. I'd have to hear the spot to know if the Austin stations are
doing no-nos, but if they're running the same spots on the noncomms that they
do on commercial stations, the noncomm that accepted it is running the risk of
your basic NOLA from the FCC.

Not in many places anymore. In san Francisco, the standards on KABL bounced
the 40's and 50's stuff in favor of soft hits of the 60's and 70's of a
traditional type. In LA, the abandonment of standards by KLAC is hotly
rumored. It gets numbers, but is nearly impossible to sell in today's ad
environment.

It doesn't pretend to serve LA. On the other hand, it puts enough signal into LA to be an occasional *nuisance* to any LPFM stations camping out on 104.7, especially when the weather is just right. Since (to my understanding), LPFM stations are not protected from the full power stations, 104.7 might not be such a good choice for an LPFM in LA, especially near the coastal area.

I don't know enough about Boston to say whether that's a good or bad thing. LA is a bit different because the commutes are long, and people spend a lot of time driving.

What a lot of the smaller stations have done from time to time (particularly) FM, is simulcast. So for example, we have one station in Santa Monica and another in Long Beach, playing the same programming. If you're driving on I-405 (which runs more or less between the two cities), this kind of setup might be attractive.

Other smaller stations (i.e. that cannot be heard across the region) have stuck with specialty programming (mostly ethnic stuff other than Spanish).

Most of the declines in listening, in fact, are in the over 45 year old
demo. The 18-34 group, the one that is supposed to be abandoning radio in
droves for free downloads form Napster must have found out that that is
amazingly like work and full of stiffs. The 45+ crowd, and, particularly the
55+ group, is so unappealing to advertisers that here is no incentive to
program to it.

When a station does try and does a good job, like KJUL in Vegas, they are
rewarded with a huge share... KJUL has often been #1 there and is generally
top 3 in the market! Since it is a show town, they are more acceptable to
the trade and seem to be doing well.

That may have worked in small markets... a good example being the 1600 AM (WSNX?) in Muskegon during the late 50's and early 60's. But stations like WLS and WHK and KQV and WPOP and WABC and so on did not do too many dedications ever. Having grown up listening to and working in early top 40 (I had the privilege of being tutored on one occasion by Todd Storz at WQAM), news was done to satisfy FCC requirements, not to build localism. The premise was "have fun and play the hits."

I know that my friends and I, monolithically, switched stations every time the news came one... and many of us listened to out of town stations at night because we found good reception from several that had no news and lots of good music.

In about '64, I programmed a Top 40 that achieved high double digit shares (and had a near 90% share at night) in a 42 station market. We had no news. Ever. We had no PSAs. Ever. We had no weather. Ever. We had wild and entertaining jocks... always. We had the top hits, over and over... always. Our listeners did not want community service and localism. They wanted music, lots of it... and fun. Hell, we are an entertainment medium and often forget that little detail. (We did not do dedications, either... and were challenged many times by competitors and always won.)

I have a pretty good car radio, and can never get them in the San Fernando
Valley well enough to want to listen consistently. Ratty picket fencing or
fading or cochannel or adjacent channel interference.

They ask the listeners in a controlled random probability sample and then
play what the listeners want to hear. It's called "research."

Are you in the USA? If you are not, I appologize for my cheap shot at your
grammar and spelling. If you are, it stands uncorrected.

Could you explain that one? If people listened once an hour, every hour, for five minutes only, you would have the makings of 1) insomniacs and, 2) a #1 radio station.

"dana" <danay@primenet.com> wrote in message news:Pine.BSI.4.02.10007100231500.26028-100000@usr02.primenet.com...

Greg and Joan wrote:

"Octogenarians? I agree, there isn't much out there. Then again,
octogenarians
don't compose a large segment of our society (and even less of an economic
segment)."

Sorry, guys, I disagree. Senior citizens are the fastest growing segment of our population according to ever census figure I can find because we're living longer. That means more of an economic impact than ever. That also means the MYOL format is already aiming for that target by skewing (sp?) to the early rock music.

Hey,

I'm setting up a local radio station called Tynesound Radio. It's based on Tyneside, UK.

Have a look at our site, and tell your friends.

www.tynesoundradio.co.uk

It's gonna be the BEST BIGGEST small station EVER!!

Don't forget to leave your details in the guestbook though!!

Thanks

Steve.

Source record: 18761

A new twist around here. Somebody set up a Part 15
transmitter and is selling "remotes" from area garage
sales. "We're here at 1500 Cheshire Blvd, just off
Main St., and this is a great garage sale. Sam, what
do you have for sale today? Sam: Well we got NASCAR
collectibles, tables and chairs, a victrola, ..."
There are signs near the garage sale that say "Garage
Sale info.....or "Shopping Info", tune to 100.5 FM.
Well, I thought it was interesting.

Your "no repeats for a month" would probably sound so unfamiliar that that would cause all but the most die-hard oldies collector types to lose interest. People still want to hear their favorites. Last time I did oldies requests, the listeners still were calling for "Unchained Melody", "I Can't Help Myself", and all the favorites. Very rarely did someone call for something scratchy. WGRR, Cincy, for one does play some of the "oh wows", especially on their weekend specialty shows. But they blend them in skillfully. There is a right way and a wrong way. I wouldn't want to hear S. Sgt. Barry Sadler followed by "Love Me w/ All Your Heart" (Ray Charles singers) and a bunch of other stiffs in a row.

As per octogenarians and "MOYL", that format stayed pretty dormant from its debut in the 80s until its demise. What I've heard of the new version still seems to skew quite old. Westwood One Adult Standards focuses on ages 40-64, and actually is pretty recognizable to the baby boomers. I've always said that when I hear the Rolling Stones on Adult Standards, I'm officially old. Think they're already playing some Beatles and Beach Boys.

2806. Your Attention, Please (tap..tap..tap)

Newsgroup: rec.radio.broadcasting
Date: 2000-07-10 00:00:00 UTC
From: "Frederick R. Vobbe" <fredv@nrcdxas.org>
Message-ID: <3.0.3.32.20000710214257.006b3c8c@nrcdxas.org>
Source record: 18763

Yes, I get that same feeling (the one where you just fell on the bar of your bike), when I hear someone tap on the end of a microphone.

The National Radio Club convention will be held over labor day weekend. If you don't know what the National Radio Club is, it's the world's oldest and largest radio listener's club. Details are at http://www.nrcdxas.org. I'm looking for help from those of you that work in radio

At this years convention I will have (2) mock radio stations, and AM and FM. These stations are like the ones you work at except the AM is carrier current (covers the hotel, and that's about it), and the FM is 100 mW. They are programmed with a Wireready automation, running an oldies format. The AM uses an Innovonics 235 audio processor, and the FM has an Optimod 8100. The reason for these is so members can change the settings on the processors and hear what happens at the other end. It's easier for them to hear it than to try and explain it!

Here is what I'm looking for....

First, I would like to get some welcome messages to drop between the songs. Something like... "Hi this is Dan Ingram from WABC in New York. Radio has been a good part of my life, and I'm sure it's been a good part of yours. I would like to welcome you to the National Radio Club convention, and remember, when you're in New York, it's 77 WABC!" or perhaps.... "This is Pete Street from Newstalk 1020. When you are in Demographic Illinois, tune me in for your news and information each morning Newstalk 1020 is the voice of the Cubs, and we're your news source for northern Illinois. Be sure to listen for Newstalk 1020 WAAA, but in the meantime, have a great National Radio Club convention and stay tuned to WNRC!"

WNRC is the call sign we gave the station. Feel free to change the copy in any way you see fit. Pass it around to others at the station. Send the final results to me in Reel, Cassette, or CD. (Sorry, no minidisc yet). Or, you can email them to me as MP3 files to: fred@wlio.com (day job).

I would also be interested in promos for things on your station, no matter if it's the afternoon guy, your countdown show, or even a promo for Rush. As long as it mentions your station, it's good to go.

This is a radio junkies convention. All the people eat, sleep, and drink radio. They are aircheck freaks, promo item collectors, and have some of the best trivia minds on radio. I hope you can help me out by contributing.

Oh... one last thing. Doc Holiday did liner for us that says, "Through the years there has been some great radio... stations with quality programming and talent. We would like to salute a great station" At this

point a jingle is played from a station. If you want to send your legal ID or TOH stager, I can use this too.

For those of you that want to hear what we did last year, there are some real audio files at http://www.nrcdxas.org/ra. Download them or launch them from the site. You'll get the idea of what we do to entertain people at the convention.

Fred Vobbe, Publisher
DX Audio Service - National Radio Club, Inc.
706 Mackenzie Drive
Lima OH 45805-1835

PS: if you have any questions, my day job is C.E. of WLIO(TV) in Lima. You can call me at 419-228-8835 between 8:30 and 4:00. Again, send MP3 files to fred@wlio.com or any questions you might have.

Source record: 18764

> Kat and I will keep posting in here

Well, Cat and Wiseguy, I just hope you won't get expelled from Sweden
.....
Like any European can't "just go" to the USA and work for (almost) peanuts
for an American
radiostation , Americans can't officially do that in Europe. I've been
following this thread a bit,
and as Sweden is part of the European Union, strict immigration laws are in
effect there
(just as there are immigration laws in the USA, banning foreigners without
a green card
from working for a broadcasting organisation). Americans can come to
Europe to have a holiday and don't need a visa. But that's at about it.
For doing even the slightest bit of work, you'd need a workpermit. Also,
you should at least be
paid minimumwages, and the minimumwages in Sweden are among the highest in
Europe !
But then, you won't be getting minimumwages, because if the administration
finds out you're
actually working in Sweden, you'll be kicked out of the country with a
stamp in your passport.
Your employer would be facing a heavy fine. But that fine could still be
less than having to go
through the official procedure of hiring someone, because the moment you're
hiring someone to
work for you, it's difficult -by law- to fire that person again.
Maybe it would be different if the structure of the operation would be
different. But since Mr.Bandit
explicitly states (on his website) that his project isn't a democracy, that
he's the boss and that you're working for him,
it's obvious you're really doing something which actually's not allowed.
And thus he could be called a real Bandit :-)
Not that I care . I've done things in my broadcasting carreer not caring
about decent payments, and just to get a cool
experience. It's just that you might wanna know that also in this part of
the world, people legally can't just fly foreigners
in and let them work for very little money for a relatively short while.
Anyway, continue having fun up there !

We have a new transmitter on the way for our all-sports format station to replace the ailing aging wreck that's on the air now. The current transmitter is running at 1/3rd power and with distorted audio. What's a good way to hype/promote the upgrade on the air?

Actually, they live in Florida--and no such format is available on a
signal they can receive. Not even with all the retirees there.

Even today's "nostalgia" formats don't skew that old anyway. From
what I've been able to hear, they're more into playing stuff that was
on the Billboard Easy Listening charts in the 60's and 70's. My folks
are from the Glenn Miller generation.

That's why KFRC, San Francisco dropped nostalgia for rock oldies some
years back. The station was in the top 5, but unprofitable.

The kids gave KABL a boost for a while with the swing craze, but near
as I can tell that fad's over.

> >dana <danay@primenet.com>wrote:
> The average oldies station has a music library of 1000 songs......>

I used to believe the above statement was true, until I ran into an old friend who works for a very, very, very prominent Clear Channel oldies station. He told me the primary oldies category (CC calls it "level 1") has just UNDER 300 titles!!!! Now, they do play a few hundred other songs for special weekends or days-of-the-week. But, 95% of the time, it's the same slightly-less-than-300 songs over and over again.

From what my friend tells me, Clear Channel, and other station chains, sincerely believes the public only wants a few hundred tunes from the 50's, 60's, and a wee bit from the early 70's (pre-disco years). Say, roughly 1957 to 1972...that's only 300 songs from a 25-year period.

Nobody's suggesting they play 2000 songs, that's TOO many for a commercial radio station....but, 300? How about 400-500? Maybe it's me, but under 300 songs for a 25-year era is awful!

Oh: every year or so, the station comes in and pulls out and "rests" about 50 to 75 songs....let's them sit for a few months or so...sometimes 6 months. Apparently this is a common practice for oldies stations.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

I have been using 100 mila watts for years, and there are local stores buying spots from me for years, and I am playing music that they want, and making a little profet out of this station.

Hey Bob,

I had the original 706 and now I have the MKIIG. Much better in the FM band although it's still can't compete with the indash radio.

When you broaden the options you fragment the market. Most people here like to blame programming that doesn't fit their individual taste for the loss of audience. The fact is that there are now many, many more options. I've got a portable CD player, a portable minidisk player and a portable MP3 player. I've settled on the minidisk player as my favorite because it fits in a shirt pocket and doesn't require the time and dedication MP3 does to get an hour of music.

At home I have 40 unannounced/non-commercial music channels and more than 200 video channels. Couple that with my collection of DVD movies and I've embraced all sorts of options. The Internet isn't a conflict for me because I've only found one Internet station that has reasonable fidelity (beethoven.com) with a cable modem. I can listen to the radio while I type sarcastic messages in newsgroups. No conflict there.

While all this proliferation is going on radio is having one of the best years in its history. It seems the more people complain about it and predict its death the more money it makes, the higher the sale price goes and the more people try to get in the business. Go figure.

Host Lane Quigley has done it again, as his MEMORY LANE SHOW takes its tenth look at "Forgotten Top Twenties" -- songs that got up to the upper echelon of the United States record charts, but are totally ignored by today's programmers.

On this program, Lane answers a whole bunch of listener requests [you can request songs for future Memory Lane Shows by sending Lane a note to: MemoryLaneShow@aol.com].

Here is the playlist:

FORGOTTEN TOP TWENTIES #10
1. I've Had It - Bell Notes [#6 1959]
2. One Broken Heart For Sale - Elvis Presley [#11 1963]
3. Freight Train - Rusty Draper [#6 1957]
4. Nothing's Too Good For My Baby - Stevie Wonder [#20 1966]
5. Guitar Boogie Shuffle - The Virtues [#5 1959]
6. What In The World's Come Over You - Jack Scott [#5 1960]
7. Let's Get Together - Hayley Mills [#8 1961]
8. Hi Heel Sneakers - Tommy Tucker [#11 1964]
9. Selfish One - Jackie Ross [#11 1964]
10. Look For A Star - Garry Miles [#16 1960]
11. I've Told Every Little Star - Linda Scott [#3 1961]
12. Lipstick and Candy and Rubber Soled Shoes - Julius La Rosa [#15 1956]
13. Last Chance to Turn Around - Gene Pitney [#13 1965]
14. Beechwood 4-5789 - The Marvelettes [#17 1962]
15. Little Bitty Girl - Bobby Rydell [#19 1960]
16. I Wish That We Were Married - Ronnie & The Highlights [#16 1962]
17. Fabulous - Charlie Gracie [#16 1957]
18. A Rose and a Baby Ruth - George Hamilton IV [#6 1956]
19. Don't Forbid Me - Pat Boone [#1 1957]
20. Don't Play That Song (You Lied) - Ben E. King [#11 1962]
21. Here Comes Summer - Jerry Keller [#14 1959]
22. Turn Down Day - The Cyrkle [#16 1966]
23. Sail Along Silvery Moon - Billy Vaughn [#5 1958]
24. Talkin' 'Bout My Baby - The Impressions [#12 1964]
25. So Sad - The Everly Brothers [#2 1959]
26. Over The Rainbow - The Demensions [#16 1960]
27. Punish Her -Bobby Vee [#20 1962]
28. Lonely Street - Andy Williams [#5 1959]

On next month's edition of "Forgotten Top Twenties", the MEMORY LANE SHOW will feature all artists from the Rock & Roll Hall of Fame. So many of

these great performers had tons of top twenty hits, but you only seem to hear a small handful on today's radio. If there is a song or artist you want included on this program, please let us know!

Remember to play show #182 all you have to do is go to our archives page at http://www.palmsradio.com/rockittext.htm and click to show #182. You do need real player and if you don't have that you can download it for free at http://www.real.com

Also, in concluding we have also updated the Personality page and have added Al "Cool Daddy" Smith and you can check that out at http://www.palmsradio.com/bio.html

Rock-it Radio listener
looking for information

One of our Rock-it Radio listeners wrote to us and requested some help in finding a song. So, we told her we would gladly post it.
Here is what Korrie is looking for...
Hi I am looking for info on a song done by the Pearlettes in 62, 2 versions of Duches of Earl were made, one on Vee-Jay 435. I need the info on the second version. Can anyone help? Thanks...Korrie

If anyone has information on that recording please let us know and we will forward it to her .... Our e mail address is:
Rockitradio@earthlink.net
~~~~~~

Back from the Great White
North

The Trouble with vacations is that they just don't last long enough. Bennie Dingo (thas' me) and Jammin' Jan just returned this evening from Alaska. We both had a great time and now it's time to hunker down and get back to business. We will be having more shows coming up here this week so we will keep you all posted! If the shows got a little monotinous and wouldn't rotate on onlinemusic.com site well that is because we do the rotating and we weren't here to do it.
We found a little gold mine in 45's in a little collectables shop in Kodiak. I never had much luck finding music in Alaska, but there was a stack of 45's in the corner of this shop -- at the walloping price of 50 cents each and were from '55 to '62. Needless to say we took the whole stack :) -- it's getting harder and harder it seems you collectors out there should know to find these vinyl gems -- it sure is a good feeling when you do find such a treasure though! We will be doing a show of these 45's in our next show that we will get to
either tomorrow or the next day.

All the Rockin Best,

Bennie Dingo
Rock-it Radio

I think that Wall Street and other industry "experts" tie "market share" - which is how radio and TV ratings are measured - directly to revenues, profitability and viability. And in many cases, they're dead wrong.

However, you will remember my previous postings on the livery stable owner in the emerging era of the automobile. There will still be a horse and buggy industry (there is one today, in fact) but many more people prefer to drive cars to get around, or use public transportation. This is an exaggeration, of course. But, as Bill Kennard admonished the folks at the NAB -- you are in perfect position to exploit the new technologies and make them work for you, but unlike when television and FM radio came along, for some reason the radio industry is not jumping in to the new medium of the internet. I have read that one large group of broadcasters won't let any of their stations broadcast on the 'net because they just haven't figured out what to do with it yet. Fortunately for them, the world of internet broadcasting is still wide open and they will be able to get in without fear of being left at the starting gate. Back when TV started, there were only so many channels, with limited range -- if you didn't get aboard early and thrive, you were dead.

CBS almost made the mistake of not getting into television, according to Earle and Marsh, but in 1948 reversed their views -- because they were losing talent to NBC and even ABC, and the bellweather moment was the 1948 Cleveland Indians-Boston Braves World Series. While they had operated experimentally and even had a few affiliates lined up here and there in 1948 - if they didn't jump in head first NOW, they would never make it.

The internet is still "finding itself" -- but will never calm down to a model the way television and radio did because there is no limit on spectrum, and no limit on how far your signal can go. There is no defined market border, and no true population limits. And with the continent rapidly upgrading bandwidth from 56K to DSL and cable modem, the fidelity for music to satisfy most has arrived.

So while broadcasters can stand back and scoff at the 'net, or even fear it, there is good news for them. There will always be room for them on the 'net. But, they're not going to be able to shut out anyone else, either. There will be no cries of interference. There will be no argument that

there's only so much money in a market or room for x number of stations. And as Matt Drudge pointed out at the National Press Club, no one is going to need a "pedigree" or "sanctioning" to get into the business.

If you consider the Lewinsky-Clinton issue one of the top investigative reporting stories of the 20th Century, keep in mind that it broke first on the Internet.

No doubt, some new musicians, deprived of airplay in the big conglomerates, will find a future on the Internet.

Because computer technology is on nearly everybody's desktop, the financial industry now goes to the web first, and not the broadcast media.

While exposure of news from overseas outlets by the average person has been difficult in America, and even discouraged -- the Internet introduces a new paradigm.

I don't know -- but if I were in the broadcast industry, I would be thinking of ways to take advantage of this new medium, and not ignore it. It has too much potential. The only good thing is, you can get in later. Will you be able to compete? Time will tell.

Our local AM station, WCCM(AM) is now on the Internet. My daughter is stationed in South Korea, so she can now hear news from her neighborhood. Your station cannot do that. But guess what? So can people in New York City.

Hello Group,
We are looking for someone for a radio station that had or has one of those Master Cruisers. The free remote vehicles that Master Card gave many stations from coast to coast. What I'm looking for is the old software and maybe a description of the connecting cords to get the message boards working. The maker of the trucks and the boards seems to

have gone out of business. We have one of these old vehicles and would like to get the boards working again.
Thanks,
John Mullaney

Since very few listeners care about how powerful the station is, why
don't you promote an improved sound and great programming?

You'll get very limited promotional mileage from a one-time
transmitter installation. Good programming can be promoted
indefinitely. Of course, the programming really does have to be good.

>some reason the radio industry is not jumping in to the new medium of the
>internet.

What planet have you been visiting. There are thousands of radio stations webcasting. My station was among the very first to webcast 5 years ago. Virtually every radio station and group has a web site.

> I have read that one large group of broadcasters won't let any of
>their stations broadcast on the 'net because they just haven't figured out
>what to do with it yet.

That would be CBS/Infinity and Mel Karmazin. If I had to choose the between business savvy of Mel and the vast majority of Internet "leaders" my money is on Mel.

> The internet is still "finding itself" -- but will never calm down to a
>model the way television and radio did because there is no limit on
>spectrum, and no limit on how far your signal can go. There is no defined
>market border, and no true population limits.

There certainly is a limit on spectrum! It's called bandwidth. I have a cable modem and I still get buffering on every webcast. The lack of a market border is also a drawback. If your product is local or regional you're paying for a lot of waste. If, like car makers, your products have different model names in different parts of the world, you have a problem unless the webcaster can feed the correct spot to the correct region.

> And with the continent
>rapidly upgrading bandwidth from 56K to DSL and cable modem, the fidelity
>for music to satisfy most has arrived.

For the most part, the fidelity stinks. CDs got rid of the wow and flutter that plagued turntables. Now webcasting has brought back similar artifacts and added buffering and lossy compression. I have my computer audio connected to my home theatre system. So far, I found only one webcast that even approaches FM. That's beethoven.com feeding at 64 where everyone else is limited to 28 or less.

>So while broadcasters can stand back and scoff at the 'net, or even fear
>it, there is good news for them. There will always be room for them on the
>'net. But, they're not going to be able to shut out anyone else, either.

No broadcaster I know (including Infinity) is scoffing at the net.
Most of us are trying to figure out how to dominate it.

>There will be no cries of interference. There will be no argument that
>there's only so much money in a market or room for x number of stations.

Let's see what kind of market results when you're now competing with
every station in every market in the world. How will you slice that
pie and come out with enough of the market to pay your employees?

>And as Matt Drudge pointed out at the National Press Club, no one is going to
>need a "pedigree" or "sanctioning" to get into the business.

Like Matt Drudge, they needn't worry about accuracy. The Internet
worships inexperience and lack of professional discipline. Honesty and
integrity aren't flowing freely there, either.

> If you consider the Lewinsky-Clinton issue one of the top investigative
>reporting stories of the 20th Century, keep in mind that it broke first on
>the Internet.

By sheer luck. How many great investigative stories have come from him
since? He's like a singer with a single hit trying to release a
Greatest Hits album. Famous for being famous.

>Because computer technology is on nearly everybody's desktop, the financial
>industry now goes to the web first, and not the broadcast media.

With dotcoms dropping like flies and investors actually wanting
business plans, I'd be very careful about those kinds of statements.
There's a lot of investor money out there to buy radio stations. The
Internet frenzy is beginning to die down and turn into a business
investment. Radio stations are selling for astronomical prices. It's a
great business to be in and one with a terrific future.

>Our local AM station, WCCM(AM) is now on the Internet. My daughter is
>stationed in South Korea, so she can now hear news from her neighborhood.
>Your station cannot do that. But guess what? So can people in New York
>City.

I've got news for you. She could receive WOR, New York, on the
Internet five years ago and still can. Well before WCCM even had
dialup. Please don't lapse into the Drudge mode of not checking your
facts before you make a statement like that.

> Essentially we are volenteers given room and board and a tip at the
> end of the week. I know none of the employees have any complaints.

The way it has been described by both Mr.Bandit on his website and you in
your postings, you're
effectively working. And for a commercial purpose (the wallet of
Mr.Bandit). And you agree with
this yourself, stating that "none of the employees have any complaints".
Also, even if you'd be a true volunteer
for a nonprofit organisation (which, also, is not the case here) in
Europe, you'd need a visa for that.
Anyway, what the heck. I think that there's a good chance that you all
might be getting away with it.
It's just that IF the Swedish Administration finds out what's going on,
there's a chance that they will take action. The fact that
you don't have any complaints will be totally irrelevant to them. Someone
without a work permit who's not
complaining about the work he's doing, still has no work permit !! But of
course at this time of the year the
Swedish officials are pretty understaffed as they wanna go on holiday too
!! And the ones who remain working throughout
the summer are likely to concentrate on more serious cases than chasing a
few American disc jockeys who are having fun in Sweden
for a couple of weeks ! I live in the Netherlands. My country's also part
of the European Union and these working/immigration laws apply to my country
as well. Enjoy yourselves up there !!

Cheers,

Herbert Visser

2832. (Closes soon) [WILL-AM-FM-TV] Art Director position open

Newsgroup: rec.radio.broadcasting
Date: 2000-07-12 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <396cf724.302575511@news.cso.uiuc.edu>
Source record: 18788
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

POSITION AVAILABLE
Art Director
WILL AM-FM-TV
UIUC

STATIONS: All stations provide non-commercial, public broadcasting services and have a strong regional presence. WILL-TV is the PBS station serving east central Illinois, a market of 330,000 households. WILL-AM, a 5,000 watt NPR station, serves much of Illinois and western Indiana with a news and information format. WILL-FM, a 105,000 watt station, serves east central Illinois with predominantly classical music programming. AM has been on the air since 1922, FM since 1941, and TV since 1955. Stations are housed in a new public telecommunications center, Campbell Hall, and are licensed to the University of Illinois at Urbana-Champaign.

LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 180 miles northeast of St. Louis, 120 miles west of Indianapolis. The University setting (37,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. Local schools, libraries, and shopping areas are excellent.

POSITION: Regular full-time academic-professional appointment. Employee is a member of the Development Department of the Division of Broadcasting of the University of Illinois. Reports directly to the Director of Development and works closely with other Development Department units, including marketing, membership, major gifts, and corporate support. Also works with television production staff and with Internet operations staff.

RESPONSIBILITIES: Has primary responsibility for management of the visual image of the WILL stations through print materials and other visual mediums. Supervises and evaluates work of art unit staff in print, broadcast, set, and web design. Provides art unit leadership; manages unit workload. Creates visual materials. Monitors unit computer system.

DESIRED QUALIFICATIONS: Baccalaureate degree in graphic design or related field required, graduate degree preferable. Minimum three years professional experience in graphic design or related field required; five years preferable. Design talent and leadership ability essential. Must have strong organizational

skills as well as project management and administration experience. Minimum one year supervisory experience; proven ability to work well in client relationship. Must be proficient in use of Macintosh, including use of PageMaker, Freehand, and PhotoShop. First-hand knowledge of printing industry, understanding of basic principles of marketing necessary. Hands-on experience with broadcast, set, and web design desirable but not required. Understanding of and commitment to the goals of public broadcasting, and compatibility with a university environment are also criteria. Candidates will be asked to present portfolios of their work to demonstrate expertise in the field of visual communication.

SALARY AND BENEFITS: Competitive salary commensurate with experience. Excellent benefits: twenty-four work days paid vacation annually, paid health insurance, paid life insurance, sick leave, disability leave, university retirement system, and other benefits.

TO APPLY: Send a complete resume and name, address, and phone number of three professional references to the address below. Receipt of application will be acknowledged. To receive full consideration, applications should be received no later than July 21, 2000. Position available August 28, 2000.

Valerie Gadbury
WILL AM-FM-TV
Campbell Hall
300 N Goodwin Avenue
Urbana IL 61801-2316
217-333-1070

AFFIRMATIVE ACTION/EQUAL OPPORTUNITY: The University of Illinois is an affirmative action/equal opportunity employer.

Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

STATION MANAGER, WILL-TV
University of Illinois at Urbana-Champaign

THE EMPLOYER: The Division of Broadcasting of the University of Illinois operates public radio and television stations serving much of Illinois and half of Indiana. WILL-TV has been on the air since 1955, and is the local PBS affiliate. WILL-AM, on the air since 1922, is an all-news/information service. WILL-FM, which began in 1941, serves 18,000 square miles with 105,000 watts, and is the most powerful station in Illinois. The Division of Broadcasting is housed in a housed in a new broadcasting facility, and is committed to a policy of encouraging the growth and development of its employees. Although results are important, the working environment is friendly, collegial, and mutually supportive.

THE LOCATION: The University of Illinois is located in the two adjacent cities of Urbana and Champaign, Illinois, which offer the advantages of medium-sized city living (110,000 population), with easy proximity to Chicago (135 miles), St. Louis (175 miles), and Indianapolis (120 miles). The university setting (35,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a full-time, academic-professional position. The Manager of WILL-TV is responsible for all day-to-day activities and operations of the station. He/She reports to the Director of Broadcasting and is a member of the Executive Committee, which involves participation in development of policy at the Division level as well as the usual planning, personnel management and budgeting activities of a station manager. A carefully articulated mission statement guides activities. There are substantial opportunities for personal and professional growth in a stimulating environment-as well as challenges and aspirations, which will both encourage and test that growth.

DESIRED QUALIFICATIONS: A baccalaureate degree is required; a graduate degree is preferred. We seek a person with not less than seven years experience in television broadcasting, not less than three of which is managerial in character. Knowledge of the structure of public and commercial broadcasting is essential, as is the ability to work with PBS, APTS, CPB, other public broadcasting stations, and professionals in the field. The candidate must be a person who has the respect of colleagues at other stations and the ability to represent this licensee well in the national discussion about the future development of the system. Leadership ability, good communication skills, a sense of commitment to the mission of public broadcasting, and an understanding of the role of public television in the context of a university environment are all essential.

SALARY & BENEFITS: A starting salary of not less than $75,000 plus a very generous benefits package-including one month of vacation annually, health insurance, life insurance, disability insurance, choice of three retirement options with an employer contribution, sick leave, opportunities for advanced education, and opportunities for professional growth. The WILL stations offer exceptional employment stability to staff members who conscientiously help us meet our goals, maintain the quality of operations, and accept the responsibilities of our Character and Aspirations Statement.

TO APPLY: Send a complete resume with the names of three professional references to the address below. Receipt of applications will be acknowledged, and should be received by September 15, 2000 for full consideration. The position will be available as soon as possible following a decision by the search committee. Applicants are strongly encouraged to request a packet containing further information before applying. The information packet is available from (and applications should be sent to):

Ms. Marge Moluf
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue
Urbana, IL 61801-2316
Telephone: 217-333-0850
Email: m-moluf@uiuc.edu

The University of Illinois is an affirmative action/equal opportunity employer.

2834. [WILL-AM-FM-TV] Assistant Director of Engineering

Newsgroup: rec.radio.broadcasting
Date: 2000-07-12 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <396cfc9e.303977320@news.cso.uiuc.edu>
Source record: 18790
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

ASSISTANT DIRECTOR FOR TECHNOLOGY

WILL-AM-FM-TV, the public broadcasting stations of the University of Illinois are looking for a very special person:

You have at least five years' experience in broadcast engineering (radio, television, or both). You have a four-year college degree (probably an EE or similar, and you feel secure with computer systems and digital communications applications), and you are still interested in learning. The quality of your work is important to you, and you take pride in what you have accomplished and in your potential for the future. You'd enjoy working in a new broadcasting facility housing both radio and television. You want to work in a progressive organization that respects and values its people, and which will encourage your growth, both as a professional and as a person. You want to grow into an engineering management position with stability, a salary of not less than $50,000, and really great benefits. You'd enjoy living in a college town with a strong advanced technology element, many cultural, sports, and entertainment opportunities, and a high quality of life.

If you are the broadcast engineer we are looking for, we will:
* Start you as assistant director for technology, initially working in the area in which you have the strongest background, supervising six engineers and a team of operators.

* Help you to learn from experienced people even more about AM, FM, and TV broadcast technology, directional AM antenna systems, digital television, digital audio production,internet transmission, and more.

* Teach you the leadership skills that will enable you to function effectively as a key member of our management team and as a part of an organization with a special and successful style.

* Encourage you to interact with professional colleagues at the state and national level, sharing your own expertise and learning from others.

* Put you in a position to assume full responsibility in the future for the technical operations of this 78-year-old AM-FM-TV combination which is still growing.

Call or write for complete information about this position and for a full application package. Direct your inquiry to:

Ms. Marge Moluf
WILL-AM-FM-TV
Campbell Hall for Public Telecommunications
300 N. Goodwin Avenue
Urbana, IL 61801
217-333-0850
E-mail: m-moluf@uiuc.edu

For full consideration, apply before September 15, 2000
The University of Illinois is an equal opportunity employer.

Sadly, Music of Your Life can be taylored to attract a younger demo WHILE it keeps the older folks but no one seem to "get it". I have and it works quite nicely. AS we say "this ain't grampa's radio any more!" AND we don't have to play anything by the Rolling Stones! A few that have heard an aircheck seem to like it.

>

Simulcasting but not WEBcasting. Kinda like what they did on FM for many years, until simulcasting was virtually outlawed. Throwing the signal on the 'net is not exploiting it.

>
> > The internet is still "finding itself" -- but will never calm down to a

> a market border is also a drawback. If your product is local or
> regional you're paying for a lot of waste.

That's the point, Rich. Those truly "webcasting" (not just lazily simulcasting a broadcast signal) are not providing a 'local' or 'regional' service.

> If, like car makers, your
> products have different model names in different parts of the world,
> you have a problem unless the webcaster can feed the correct spot to
> the correct region.

Again, you're missing the point. Webcasting is not 'regional'. And even if someone had a regional program, what 'waste' is there? The same thing goes all over the world at the same fixed cost. The guy in England hears the same thing that the guy in New York hears. Think outside of the radio box for a minute. If I start a webcast, and someone in Germany clicks in, that is not a 'waste'. What is being 'wasted'? I would consider that a plus.

>
> For the most part, the fidelity stinks. CDs got rid of the wow and

>

It's getting better, Rich, and you know it. Is it classical FM audio right now? No. But it is getting better. Greater numbers of the internet community will be on DSL and cable modem. And it will be when everyone has high-bandwidth capability.

> No broadcaster I know (including Infinity) is scoffing at the net.
> Most of us are trying to figure out how to dominate it.
>

They haven't yet. But just throwing Rush Limbaugh or Dr. Laura on the 'net isn't going to cut it.

> >There will be no cries of interference. There will be no argument that
> >there's only so much money in a market or room for x number of stations.
>
> Let's see what kind of market results when you're now competing with
> every station in every market in the world. How will you slice that
> pie and come out with enough of the market to pay your employees?

There is only one pie, true. Again, unfortunately, you are thinking in terms of local and regional markets. The internet doesn't work that way. If you have ONE station and it goes world-wide -- and you carry advertising -- you don't slice the pie up with ANYONE. I think what you're thinking is that the Internet will work like network radio, where each little station runs their own ads. There is no "slicing" of revenue. It all goes to the webcaster. And he isn't concerned about market share but revenues and profits. Since a lot of webcasting (not simulcasting) is niche programming -- the markets are more direct. An advertiser or purveyor is interested in sales, not 'share' or demographics, necessarily.

> Like Matt Drudge, they needn't worry about accuracy.

Hmmm. Does the term "nerve gas" mean anything to you? I think it does at CNN. How about the words "Richard Jewell"???? Inaccuracy is not restricted to the Internet. Nor is irresponsibility. Do you remember when Bernard Shaw almost had the biggest 'oops' in broadcast history? Do you remember the words "for God's sakes, will somebody get it RIGHT?" Or the famous headline "Dewey Defeats Truman"????

Never mind, I know, "that's different"

He is likely no more inaccurate than a lot of the, ahem, uh, established media. And if you watch his speech before the National Press Club, you would see he made FOOLS of the Fourth Estate you set out to grill him -- including one guy who admitted with humility and a bowed head "you made your point." Go watch it.

.Here in Boston, one of the most often read quotes used to be "The Globe regrets the error."

> > If you consider the Lewinsky-Clinton issue one of the top investigative
> >reporting stories of the 20th Century, keep in mind that it broke first on

> Internet frenzy is beginning to die down and turn into a business
> investment. Radio stations are selling for astronomical prices. It's a
> great business to be in and one with a terrific future.
>

Again, a misinterpretation on the part of Mr. Wood.

Most stock markets put their quotations out on the net in real time. Which means they get them there faster than you possibly ever could at your radio station. What, if I want to see how my stock is doing, I'm not gonna go straight to the source, but wait for the news at noon to see what the reporter saw happening two hours before? The financial world runs on the Internet now. What, do you really think that NASDAQ will pull their Internet pages ????? And that the financial world will go back to use of the telephone instead of the Internet??? Or that the big boys on Wall Street say "NASDAQ quotes? NYSE real-time quotes? BAH! I'll get the quotes tonight after the market closes!" Yep, that's how they operate.

BWHAAHHAHHHAHHHAAAAAA!!!!!!!!! Here, have some penny stock

Rich, I will give you a very carefully thought out statement. THE INTERNET IS NOT GOING AWAY, NOR IS IT GOING TO SHRINK. Even if dotcoms drop like flies. The Internet isn't going away. Wall Street will not abandon it. E-commerce is a fact of life, and E-commerce will not fade away from competition from Slim Whitman record sales on TV or infomercials.

DMX started the job and Sirius satellite will finish it! Here's the latest for those who requested I "keep them posted".

NEW YORK, Jul 13, 2000 /PRNewswire via COMTEX/ -- Sirius Satellite Radio

(Nasdaq: SIRI), the satellite radio broadcaster, and Webster Hall, the landmark nightclub and
entertainment venue and one of the world's leading dance music labels based in New York City, today announced a marketing and programming partnership that will bring live dance
music, weekly dance mixes and special promotions to the millions of dance music fans across the country listening to Sirius' up to 100-channel audio entertainment broadcasts.
Among its 50 commercial-free music channels, Sirius will offer a dedicated Dance music channel, programmed by dance guru and former KROQ and MARS-FM Los Angeles
personality Swedish Egil.

(Photo: http://www.newscom.com/cgi-bin/prnh/19991118/NYTH125)

As part of the agreement, a weekly four-hour dance party from the Webster Hall Grand Ballroom will be beamed live to Sirius listeners coast-to-coast, and broadcast commercial-free on
Sirius' Dance music channel. In addition, Sirius Radio expects to spotlight special weekly mixes compiled by Webster Hall, and Sirius will

also be promoted on dance compilation CDs
produced by Webster Hall Records.

"Sirius' dance channel and our weekly live dance program with Webster Hall will truly be the next best thing to being there. We'll be giving listeners the feel of a dance club with all the
great music mixes, as well as access to world-renowned club DJs, and the

party will never be interrupted by commercials," said Joe Capobianco, Sirius' senior vice president of content.

"Dance music fans around the world know Webster Hall and its reputation for breaking new talent and showcasing new music," said Lon Ballinger, President of Webster Hall. "By
partnering with Sirius, we'll be able to reach a vastly broader and larger audience, bringing them the ultimate dance party across the nation."

"The Sirius Dance channel is going to be the place to be if you want to listen to trend-setting, world-class dance music," said Swedish Egil, Sirius' Dance programmer. "For the first time,

people will be able to tune to one place -- Sirius' Dance channel -- to hear music by some of the world's best-known club DJs and breakthrough new artists."

Sirius Satellite Radio (www.siriusradio.com) is building a digital satellite radio system to provide radio like it's never been heard before. Sirius' 50 commercial-free music channels will all be programmed and created by renowned experts in each of the musical

genres at the company's National Broadcast Studio in Rockefeller Center.

Sirius' music will feature a wide and deep range of Rock, Pop, Jazz, Latin, Classical and virtually every other music format. Artists including Sting, Grandmaster Flash, MC Lyte and others will have regularly scheduled programs on Sirius. Sirius will complement its music through partnerships with organizations like The John F. Kennedy Center for the Performing Arts and the National Symphony Orchestra. Sirius also has partnerships with Playbill(R) magazine and Live Broadway(R) to create specials and live programming for Sirius Radio's "Broadway's Best" channel, the country's first-ever around-the-clock nationwide showcase for Broadway music and entertainment.

Sirius Radio will also deliver up to 50 channels of news, sports and information such as CNBC, National Public Radio, SCI FI Channel, Classic

Radio and the BBC.

Sirius has alliances to install Sirius receivers in BMW, Chrysler, Dodge, Ford, Jaguar, Jeep(R), Mazda, Mercedes and Volvo automobiles as well as Freightliner and Sterling heavy trucks. In addition, Sirius has alliances with automotive electronics manufacturers to bring receivers to the automotive aftermarket and for installation in new cars. These companies include Alpine, Audiovox, Clarion, Delphi Delco Electronics, Jensen, Kenwood, Panasonic, Pioneer, Sanyo and Visteon.

Sirius has successfully launched Sirius-1, the first satellite in its three-satellite constellation. The other two satellites are scheduled to

be launched by October, and the company is scheduled to begin broadcasting at the end of this year.

Located in the heart of New York City's historic East Village, Webster Hall (www.websterhall.com) is a 40,000 square ft. landmark nightclub/entertainment venue that features NYC's hottest DJ's and has hosted some of the world's most famous musicians.

HIs format is up and running with some success on a small station west of Fort Worth, so I think there could be some validity to his claim. And it does seem that there have been times in past years when what the "whole industry" believed was ignored by a savvy operator who was proven right. For example, I'm remembering the number of times in my lifetime when top 40 radio was declared dead by the industry due to "fragmentation of taste" and subsequently came back.

> I think when you figure in airfare (roundtrip) and room & board. we
> have a pretty sweet deal. It definatley amounts to more than minimum
> wage in the US.

I indeed think that you are having a good deal ! Not financially, but when
it comes to life experience, yes !
You will remember this with pleasure for a long time, when you're back in
the USA and doing your day to day (broadcasting) job.
I used to work and live on the (pirate) radioship from Radio Caroline on
the Northsea, where I had a similar deal as what
you're now having (with that difference that the ship was located in
international waters, where no Government can take control).
I didn't make money and I didn't loose money wen I was on the ship (working
for Radio Caroline's Dutch sister station
Radio Monique, there were 2 stations broadcasting from that vessel at that
time) , but I had a great time. And later, I did a similar
thing for a new Bulgarian radiostation, just after the Bulgarians got rid
of communism.
Also, I can assure you that when Mr.Bandit would have to pay a full
broadcast staff and get you into Sweden legally (that means:
with a proper workpermit) , his radiostation would become not commercially
viable. Here in Europe many people speak english,
but english is NOT our native language !! And allthough most people can
communicate in english, just very few speak the language
fluently . What we , broadcasters, all now is that you should target the
audience you're aiming at , well !! And if you're doing that
in the wrong language, then there's a pretty good chance that stations who
do broadcast in the language of your target audience,
get away with far out most of the marketshare. There's not really a
professional market for American programs in Continental Europe
(there's also not really a market for -let's say- an all German Schlager
Music Station with German speaking hosts in Louisville, Kentucky, to name
some place).
So, the chance to broadcast as an American DJ in Europe is minimal, and
you now can say that you've done it !!!! Which also looks
pretty neat on your resume back home in the USA.
But from a legal point of view you're acting in violation of several
Swedish/EU work-,immigration- AND TAX!!! laws.

>I just read this morning that the pd at KLIF, Steve Konrad, left as of
>Monday. The paper implyed that he was fired.

Are they going to spare GM Lon Bason? If so, why? Isn't he responsible for the station's obliteration too?

>To KLIF's management, I hope the next guy is better than the last two
>but I'll not hold my breath.

They need to do a clean sweep of the lineup and start over with a new group of hosts. Scrap the "Big 570" crap that people are laughing at and get a decent website. Then they should take a Promotions 101 class and learn how to get the station out there again. They need credibility and respect. Right now they are the laughingstock of the DFW area.

It will take a whole new approach to save the station if it is even still possible to do so. It's a REALLY tall order and it may just simply die.

The 0.7 speaks for itself...

Dialing: `Newsradio' boss exits

* Veteran news anchor and reporter David Roe has been pressed into service as acting news director at WBBM-AM (780). He temporarily fills the spot being vacated today by Andy Friedman.

Friedman, who jumped before he was pushed, lasted less than a year as news director at "Newsradio 780." He has landed a new job as news/talk format content manager for north suburban Northfield-based Clear Channel Communications Web Services Group.

Mike Krauser, news director at all-news sister station WMAQ-AM (670), has the inside track to get Friedman's old job permanently--especially if WMAQ picks up the sports format of WSCR-AM (1160), as expected.

In case you hadn't heard, WMAQ gives up the ghost on July 31st. The Score moves from 1160 to 670. WMAQ staffers may end up at WBBM.

Wow. Isn't radio great!

First, there is a difference between a small station "West of Ft. Worth" and anything with a measured audience. It's not uncommon for "strange" formats to actually work in unmeasured markets because local businessmen will so often advertise on stations they themselves like and stay away from stations they do not enjoy personally. Nothing wrong with catering to this group as long as it continues to buy...

Second, there has never been a "one person against the industry" case where the lone soul was proven right... at least that I know of. Of course, there have been waves of pundits who have forecast everything fromt he demise of radio in the 50's to the death of CHR. At the same time, there were hundreds of operators and staff members who were plodding right along keeping things working against such dire predictions. I never knew a moment when _everyone_ said Top 40/CHR was dead... just times when the format was out of favor by many operators and trade writers and record company promotion ducks. I've been in CHR related stations in many of the supposed "death years" and none of us believed it, I'm sure. Heck, I was even in a disco station 1979-1982 as PD and Consultant long after the death of disco... however, someone forgot to tell the listeners who made the station #1 12-24 and #2 12+ in a top 15 market.

Uncle Milty is preaching something that very few people want to hear. Just last week, KABL in SF decided to throw away a 3 share standards format because they were dead last in billing among ranked stations... KLAC in LA is reportedly dropping the format or making plans. The 1430 Jersey station that provided the format for NY is going brokered programming... etc. etc.

Please share this with fellow computer wizards and witches everywhere . . .

The links are ready, the slammers are ready, it is time . . .

The 2000 west coast poetry slam Championships in Big Sur, Cali are waiting for you. You can listen to all of the performance poetry action as it happens from the Spokenworld.com website, http://www.spokenworld.com.

$2000 is up for grabs in the 2 day event and the fight is sure to be your favorite as defending co-champions San Francisco roll into toen and take on a gaggle of teams from up and down the west coast.

This is performance poetry at it's pre-national best Friday from 11a-6p and Saturday from 11a-6p Pacific Time.

You will need realplayer to listen to this event. Time and availability subject to change, check the site for additional details.
Sponsors for this years West Coast Championship Poetry Slam are Monterey based Therapeutic Massage provider Imani Healing Arts, Santa Cruz based public radio station, KUSP 88.9 FM - www.kusp.org, Monterey Mattress Company, and local internet radio station www.radiofreemonterey.org.

> Sale info.....or "Shopping Info", tune to 100.5 FM.

I came across this, also. The one I saw/heard was in Kettering...what
surprised me is that I picked it up clearly until I had driven 4-6 miles away!
(Local note: the garage sale was somewhere near Marshall...I received the
signal while driving on Stroop until I crossed the intersection of
Stroop/County Line and Dorothy/Indian Ripple.)

Also, I was surprised by the choice of a frequency...there's a full class B
less than 25 miles away on 100.7........

2856. Internet Based Automated Delivery.

Newsgroup: rec.radio.broadcasting
Date: 2000-07-14 00:00:00 UTC
From: Val Davis <vald@audiosonix.com>
Message-ID: <200007141240.IAA24977@mercury.superuser.net>
Source record: 18662

For those of you who are interested.....

AudioSonix is being featured in the July 19th Edition of Radio World.

AudioSonix is the only Internet based AUTOMATED delivery system.

The system works like DG Boxes. You turn around and your deliveries (spots
and traffic)
are there waiting.

Unlike the many other Internet based systems that have launched this year:

AudioSonix does not use a browser.
AudioSonix requires no user intervention (other than the setup).
AudioSonix can deliver any type of content (mp3, APT, ADP, WAV
etc...directly to an automation system if desired).

It does lots more cool stuff too.

And the Production Exchange will allow stations to "swap" production
effortlessly.

The software is FREE and receiving files is FREE too.....only the sending
party is charged.

Visit http://www.audiosonix.com and get the free software.

There is a very nice piece of software called the HotBox Audio Player that
turns a simple PC with a soundcard into a soundeffects system like 360
Systems Instant Replay. It's yours for the taking FREE ALSO at the
audiosonix.com website. Click on Radio.

Thanks

Val Davis

There once was a dog, who had a bone in his mouth. He happened by a pond.
While he was very happy and content with the bone he had, he saw his reflection
in the water, thought it was another dog with a bigger bone, and so he dropped
his bone in the pond and tried to go after the one he saw in his reflection.
Alas, he was left with nothing.

Again, a misinterpretation on the part of Mr. Wood.

Most stock markets put their quotations out on the net in real time.
Which means they
get them there faster than you possibly ever could at your radio
station. What, if I
want to see how my stock is doing, I'm not gonna go straight to the
source, but wait
for the news at noon to see what the reporter saw happening two hours
before? The
financial world runs on the Internet now. What, do you really think
that NASDAQ will
pull their Internet pages ????? And that the financial world will go
back to use of
the telephone instead of the Internet??? Or that the big boys on Wall
Street say
"NASDAQ quotes? NYSE real-time quotes? BAH! I'll get the quotes
tonight after the
market closes!" Yep, that's how they operate.

BWHAAHHAHHHAHHHAAAAAA!!!!!!!!! Here, have some penny stock.

Rich, I will give you a very carefully thought out statement. THE
INTERNET IS NOT
GOING AWAY, NOR IS IT GOING TO SHRINK. Even if dotcoms drop like
flies. The
Internet isn't going away. Wall Street will not abandon it.
E-commerce is a fact of
life, and the migration of a vast part of the music sales industry and
book selling to
E-commerce has occurred. Certainly amazon.com has yet to turn a
profit, but it also
certainly had a strong influence on how people like Barnes and Noble

does business.
The walk-up bookstores and music stores have dropped off like flies.
It really
makes those infomercials selling Slim Whitman records look sick, doesn't
it?

> > I've got news for you. She could receive WOR, New York, on the
> > Internet five years ago and still can. Well before WCCM even had
> > dialup. Please don't lapse into the Drudge mode of not checking your

> > facts before you make a statement like that.
>

Huh? I never mentioned anything about WOR.

Please don't lapse into the Wood mode of misinterpreting what I said !.
Why would I
care about WOR, anyway? I'm sure somebody does. I sure don't, and
neither does my
daughter on the other side of the world.

I merely mentioned that she could receive her hometown station on the
other side of the
world, in real time. How did WOR get into this? OK, if that's your
station, you
just plugged it. But WOR is irrelevant to what I had to say. Maybe
it's totally
irrelevant, I haven't listed to WOR since it was a rock station (WMGM).

Oh yeah, back on track, "slicing the market", whatever it was you were
saying. She
doesn't have to listen to the "market radio " in that part of the
world. She's not
limited to that anymore. And as I was saying, without mentioning WOR,
if she were in
New York, or Tokyo, or London, or Iceland and wanted to listen to
news, WCCM is a
choice for her and the internet makes it possible. Is it a profitable
marketing
option for WCCM? Probably not - it's not a "webcast", it's just a
simulcast. I
will concede that there is probably someone like her somewhere in outer
Mongolia that
wants to hear the WOR simulcast on the web. And if I'm on the road, I
can now get my
hometown news anywhere in the world. And people who need to listen to
news or talk
or even national gasbag (Limbaugh, Schlesinger, et al, don't ask me
why) don't need or
demand the fidelity that you do.

The internet is another option. Sure, people will continue to pay crazy prices for
radio stations, just as people will throw money into some dotcoms. People will make
money and people will lose money. But don't look at a few dotcoms as a reflection of
the failure of a new technology. Did Dr. John Brinkley doom radio? Did the failure of
the DuMont network doom TV? Did the first pay TV channel in Hartford doom the concept
of people paying to watch TV?

However, the original point, exploiting the 'net -- is not being done by the
broadcasters. They just throw their signal out there to say that they're there. The
webcasters that will make money are the ones who find a niche and fill it, and
advertise to it. This is somewhat different than how the radio industry operates --
Stern is #1 in a market, so everybody else dirties up their show, or there is a man
and woman morning team with banter between records, everybody else copy it, etc.
Webcasting won't work that way. They are not scared of what the other webcasters
do. It's a different model, with different potential and different limitations.

On 13 Jul 2000 22:24:33 -0400, Greg and Joan <ggjn@sprynet.com> wrote:

>Again, you're missing the point. Webcasting is not 'regional'. And even if
>someone had a regional program, what 'waste' is there? The same thing goes all
>over the world at the same fixed cost. The guy in England hears the same thing
>that the guy in New York hears. Think outside of the radio box for a minute.
>If I start a webcast, and someone in Germany clicks in, that is not a 'waste'.
>What is being 'wasted'? I would consider that a plus.

It's very clear you're not in the radio business. When an advertiser's
message appears in a market in which he conducts no business, yet pays
for the audience numbers that include it, that's waste.

>It's getting better, Rich, and you know it. Is it classical FM audio right
>now? No. But it is getting better. Greater numbers of the internet community
>will be on DSL and cable modem. And it will be when everyone has high-bandwidth
>capability.

I already have cable modem service at home and DSL at work. I still
get buffering. The backbones are going to have to be able to support
all that high bandwidth traffic on a system intended for email.
Reports I've seen indicate demand is outstripping supply and will for
quite a long time. Ken Rutkowski posted a great review of a speech
given by the head of Akamai Technologies saying the net won't be ready
for prime time for years to come.

>They haven't yet. But just throwing Rush Limbaugh or Dr. Laura on the 'net isn't
>going to cut it.

Actually, it is. Bob Grant and Rush Limbaugh are the most listened-to
audio sources on the net. They have far more listeners than Billy
Bob's Favorite music mix. You seem to forget that a radio station is a
potent force in driving traffic to a net site.

>There is only one pie, true. Again, unfortunately, you are thinking in terms of
>local and regional markets. The internet doesn't work that way. If you have
>ONE station and it goes world-wide -- and you carry advertising -- you don't slice
>the pie up with ANYONE.

Of course you slice the pie. You compete with every audio source on
the net, not just your local competition. Again, your lack of
understanding of how networking works is clear. We don't share
profits.

You're not understanding that you will now compete with every one,
everywhere. That's like putting 300,000 radio stations in a market and
trying to get your piece of the advertising budget. If you get a

piece, it'll be tiny.

> I think what you're thinking is that the Internet will
>work like network radio, where each little station runs their own ads. There is
>no "slicing" of revenue. It all goes to the webcaster.

Again, misunderstanding of how networking works. We don't "slice"
revenue. Each affiliate gives the network several minutes of
commercial time to sell in exchange for (usually free) programming.
The station carries network commercials and the network sells the
cumulative audience. We do not pay the station anything. All ad
revenue for network commercials goes to the network.

> And he isn't concerned
>about market share but revenues and profits. Since a lot of webcasting (not
>simulcasting) is niche programming -- the markets are more direct. An advertiser
>or purveyor is interested in sales, not 'share' or demographics, necessarily.

The niche markets are more direct and much, much smaller. Every
advertiser has to worry about share and demographics. If your "niche"
programming attracts 12 year old kids, the Cadillac dealer isn't going
to be very impressed with the demographics of the audience. He's also
not going to be impressed that part of that tiny audience is in Pago
Pago and isn't in his marketing area.

>> Like Matt Drudge, they needn't worry about accuracy.

>Hmmm. Does the term "nerve gas" mean anything to you? I think it does at
>CNN. How about the words "Richard Jewell"???? Inaccuracy is not restricted
>to the Internet. Nor is irresponsibility. Do you remember when Bernard Shaw
>almost had the biggest 'oops' in broadcast history? Do you remember the words
>"for God's sakes, will somebody get it RIGHT?" Or the famous headline "Dewey
>Defeats Truman"????

>Never mind, I know, "that's different"

Of course, it's different. The number of serious mistakes made by
professional journalists will pale into insignificance when any
wannabe cub reporter gets on the net and claims his facts are
absolutely true, never having checked them before publishing.

How about the web sites on the net making medical claims no doctor has
ever heard of. There's simply no journalistic discipline.

>.Here in Boston, one of the most often read quotes used to be "The Globe regrets
>the error."

You mean to tell me a publication publishing nearly 100 pages a day
isn't going to make mistakes? I used to work for the Globe's
broadcasting division (Kaiser Globe - WJIB and WKBG-TV 56) and
everything was fact checked before it was broadcast or printed. At
least the Globe made retractions and corrections when it discovered an
error.

>Most stock markets put their quotations out on the net in real time. Which means
>they get them there faster than you possibly ever could at your radio station.

You may want to check this. Unless you subscribe to the same services
brokers do, you're getting a 15-20 minute delay. The real time quotes
are not free.

>What, if I want to see how my stock is doing, I'm not gonna go straight to the
>source, but wait for the news at noon to see what the reporter saw happening two
>hours before? The financial world runs on the Internet now.

No. The Internet isn't reliable enough. Brokers use proprietary
systems connected to the markets. They may allow you to buy stocks
online with real time quotes you pay to see. I asked a broker friend
of mine about this. He laughed. No broker would risk his portfolio by
relying on the net. He relies on his company's data infrastructure
connected directly to the stock market.

>Rich, I will give you a very carefully thought out statement. THE INTERNET IS
>NOT GOING AWAY, NOR IS IT GOING TO SHRINK. Even if dotcoms drop like flies. The
>Internet isn't going away. Wall Street will not abandon it. E-commerce is a fact
>of life, and E-commerce will not fade away from competition from Slim Whitman
>record sales on TV or infomercials.

No. The internet isn't going away. E-commerce is is a fact of life. As
a matter of fact, I ordered a piece of electronic equipment from
American Musical Supply. The web site promised a 5% discount and 2 day
delivery. The 2 days passed and no delivery. I called. "I'm sorry,
sir, that model is on back order." There was no provision to tell the
customer that the delivery date wouldn't be met. Had I not called (by
old fashioned telephone) no one would have called me or sent email. I
was assured it would be in in a few days. A few days passed. No
delivery. I called again. Oops! That won't be in until the end of the
month. Again, nothing in the system to notify the customer. God help
me if I had needed it for a remote. If I had used the old fashioned
telephone to place the order I would have known, immediately, it
wasn't in stock and I would have looked elsewhere.

The excuse is "we're new at this." I would have hated to order
important prescription drugs only to find the customer will die while
they're on backorder and no one saw fit to tell the customer of a
broken promise.

Try wtop2.com. WTOP's main web site has the off-air audio, and a lot of
text features. WTOP2.COM has a harder-news format for the Washington
Wonks. Jim Farley or someone else at Bonneville is willing to do more
than just "throw out their signal". They promote both sites over the
air.

BTW, wtop.com, wtop2.com, and wgms.com are among the most-listened-to
web "broadcast" sites - and all come from the same studio complex.

Anyone know what became of WBAP Fort Worth-Dallas' morning
drive character "Sam from sales?" He supposedly is the sales
director that "sells from both sides of the desk."

WBAP even marketed a series of clips of the radio routines. The
character
disappeared a few months ago without explanation. A few months later,
the character was back, but sounded like a bad imitation. Now he's
gone again.

That's amazing! How did you do that? WOR has always been WOR. We've never had any other calls in the nearly 80 years we've been on the air.

It may be totally irrelevant to you, but it probably has more listeners than all the webcasts combined and certainly makes more profit.

I'm sorry to have mentioned the term profit on the Internet.

WMGM occupied 1050, which became WHN and WEVD... it was not on 710.

In fairness, our friend may be entitled to partial credit if he was thinking about the FM home of Walt "Baby" Love, future TV actor Jay Thomas, and Rosko (I think...) Subsequently WXLO, which calls your posts always bring to mind.

I actually stopped in at 1440 Bway in the 70's, as a teenage self-acknowledged radio activist, to look at their public file. A friendly exec shared his office and a candy bar as I chuckled my way through WXLO's teeny bopper fan mail. Started me on the road to a love affair with the industry which continues to this day. (Alas, digitization is bringing back good radio, but it will never bring back our "yut.")

Jerome

>I haven't listed to WOR since it was a rock station (WMGM).<

WMGM's predecessor....and successor....was WHN, not WOR.

I hear better music mixes on the background music at my local supermarket,
than some of the local radio stations in LA...(Not to mention not having to
sit through 20 minutes of commercials, promotions, wanna-be Howard
Stern clones and other such blather).

You are very clear on that. I am NOT in the radio business. I am in the computer business. However, the nature of the Internet is that it goes everywhere, so anyone who advertises or sells on the 'net knows that this is the nature of the 'net.

>

Right. If the niche programming attracts 12 year old kids, no webcaster is gonna try to get Cadillac to buy ads there.
And the webcaster won't say "oh, it goes to Pago Pago".

What internet people see as a plus is a minus in the radio game. Who cares?

So what you're saying is that when Drudge makes a mistake, it's serious, but when CNN does, it's insignificant?

> How about the web sites on the net making medical claims no doctor has
> ever heard of. There's simply no journalistic discipline.

>

Ditto radio. I've heard quack cures on bartered radio. And I'm sure you've heard the vile, racist, offensive material what some of your fellow broadcasters allow to be carried over stateside shortwave broadcast stations.
And of course, Howard Stern and Dopey and Anthony -- now, you want to talk about discipline on the Internet?
First, radio should take a long, long, germaseptic bath. Then come back and criticize the 'net.

That's encouraging. Most just toss their signal out there for public relations purposes - to say they're on the 'net. It doesn't bring them any income, however. Or, stations will build a web page to promote their station. But very few are putting alternative services out on the 'net.

few are
> putting alternative services out on the 'net.

Not exactly. Many stations, if not most, have the savvy to know that the principal reason for streaming is to supplement local coverage and to reach local residents while they are out of town.

In the first instance, we know that many people work in areas where off-the-air radio is troubled by interference (mostly from computers!) or is inside large buildings where radio does not penetrate or in other signal-deficient locations inside the predicted signal contours of the station. The second case is seemingly simple, but really revolves around people who may be out of town a day or two with laptops and such or weekend homes... and who have diaries back in the station metro. If they can't hear you, they can't write you down.

Most of us could care little about the prospects of having, let's say, an LA station listenable in Keokuk. The talk station I used to program had a rule to not let internet listeners participate in programs unless they had some very specific data or comment about a local issue in LA... National and international media have not been uniformly successful. Remember short-wave radio? Even MTV has a bunch of variants just for Latin America. And CNN has a whole collection of program offerings for the world. Because all the world is not alike and tastes vary by region. Direct satellite and independent stations on the web may have potential for very narrow narrowcasting, but it will be a long time before it supplants radio stations (especially since radio stations will simply have multiple channels of distribution).

NEW: Pay 50% now, 50% after filing! You won't get THESE arrangements anywhere else!

We'll NEVER throw you that tired old line which states: "Payment in full must be received BEFORE services will be performed..."!

We are now accepting applicants for the second LPFM filing window. We will only accept a limited number of applicants for the second LPFM filing window. To be one of the clients for the second filing window (Connecticut, Illinois, Kansas, Michigan, Minnesota, Mississippi, Nevada, New Hampshire, Puerto Rico, Virginia, Wyoming), go to our credit card acceptance page or contact us by whatever method you prefer from our contact page.

Some lessons soon to be learned by LPFM applicants: At LEAST four of the applications which will be returned as "flawed" are from applicants who assured me, personally, that they "can file this application without having to pay for any technical help"... Looks like they fell into an NAB sponsored(?) "dis-information" trap...

Can we stop this thread before it gets a life of its own? (if it hasn't already.....)

This note is for Rich, Greg and Joan (BTW, are you two people typing at the same time?) and everyone else who has posted on this running subject line:

The net and radio are two different animals that are trying now to coexist. One is trying to learn how to profit from the other. Some of the discussions going on remind me of the TV vs. Radio arguement. When television came into its own, radio was considered headed for the scrapheap. Instead, radio had a revolution and continues to thrive, albeit in a way I don't like with the huge radio conglomerates.

The "who's better" arguement, which is the tone this thread SEEMS to be take at times, is immaterial. The real question is who will be better at exploiting the other for profit.

Our company sends localized sportscasts and weathercasts to stations via the internet. The stations love the way we do things and like the way things sound: we give that wonderful radio illusion of being bigger and keep it sounding good by using internet and computer technology We're not the only ones who do this type of business, but we make a profit on a consistant basis. We didn't make that profit until we started getting serious about the internet: setting up websites for our stations, linking them to live radar for the listening area, giving them LOCAL sports and delivering it to them through that miracle technology of MP3.

It may chap some radio people's butts by me saying this, but we're a better radio business because of the internet.

Doug Joubert

Look, you're missing the point and the broader principle. If you enter this arena, you're inviting attention and scrutiny. And yours have been, in the main, thoughtful, intelligent posts. But you lay yourself open with an unfounded statement about Rich's webcasting history, then compounded things by accusing him of self-promotion when he set you straight, then flubbed Broadcasting 101 in a futile attempt to diminish him and his station. This angle of attack is no more effective in a newsgroup than it is in a corporate conference room.

Rich has a reputation as someone who ridicules people he disagrees with. It's unwarranted. I post in disagreement with Rich all the time, sometimes vehemently, sometimes provocatively. He'll happily engage anyone on the issues, in good cheer and mutual respect. Actually, he's often quite vulnerable on the issues. But turning a political or technical debate into a pissing contest with Rich over power, prestige, money or institutional heritage does nothing but give him a cheap, unsatisfying victory.

Anyway, no occasion to take offense. Just know that in these groups broadcasting history really does matter, so mistakes will generally be politely corrected. (Your posts would also be stronger if you'd set yourself up with a Yahoo email and a distinct, uncoupled identity.)

Rich, you could help out a little by putting a simple URL in your sig file. It's a sign of strength that you're willing to give newcomers an indication of who they're meffin with without (a) making a big deal of it (b) waiting to spring it on them until after they've misstepped.

Again, as I said - there are purposes, but very few broadcasters are using the 'net to give us something DIFFERENT than what we get over the air.

Makes sense , you lose your locality. Then again, many stations don't care. If someone's listening, and they're listening to a product pitch, it's good. If, for instance, there's an ad for Coca-Cola or Shell gasoline and I am listening to a California station while online here in Massachusetts, somehow, and maybe this has to do with the fact I'm not in the industry --- as an advertiser I'd view that as a BONUS, not a 'waste' as Mr. Wood says.

Depends on what the theme of the program is. Sometimes you WILL have something of global interest.

No one said it would SUPPLANT them. Just as the Internet isn't going away,
neither is radio broadcasting. Webcasting COMPLEMENTS aerial broadcasting. It
can deliver something and provide services that radio, due to its technical and
economic limitations, can't.

"RADIO LONDON TO RETURN"
1st August - 28th August 2000 on 1143kHz - 266 metres

"Hi from us all at RADIO LONDON, were working hard right now in preparation of our new SummerY2K broadcast from Clacton Pier August 1st - 28th August.

So. what are we doing right now? Our engineer Roger Davis is working on this web site to make sure our programmes can be heard widely over the internet and he's working on re-tuning the transmitter and aligning the studio equipment. Paul Graham and Jim Marling have been working hard on sales, by the end of June we had already booked enough advertising to ensure that the broadcast would break even. Now, mid July we are on target to make this broadcast the first to make a profit. We are booking an impressive array of clients, which will make this broadcast sound the best yet. Watch out for an extensive BIG L poster campaign in East London and Essex on railway stations.

Ray Anderson has been working on the music playlist, together with Brian Long, a special BIG L FAB 500 Chart and a 100 song SUMMER OF LOVE CHART - 1967 has been compiled. An A1 giant wall poster has been produced counting down the Top 500 from the BIG L years, with a colour picture of the m.v. Galaxy and some of the BIG L deejays. This poster will be sold on air for £9.99 post free in the UK add £3 for international postage and is supplied in a cardboard tube.

"There is some superb music to play this time," added Ray, "this broadcast will sound better than all the others put together".

Over the last weekend of transmission we intend to broadcast the entire FAB 500 chart, (that will be a mammoth job).

Also, Listen for an hour of BEATLES music on Saturday mornings at 10.00 am on THE BEATLES SPECTACULAR and the RNLI Request Show on Sunday mornings

Ray and Norman Barrington have also been looking at some new PAMS jingles to be recorded in Dallas, the first Radio London jingle package since 1966, a decision on these will be made shortly.

Some BIG L JOCKS on the way.

Keith Skues will be on-air on Sunday 13th August at 3.00pm

Ian Damon is booked for Saturday 5th and 12th August at 12 midday

And John Ross Barnard will be news reading for us again

And many more will be heard again over 1143 kHz - 266 meters"

>you, they can't write you down.

As an example of the former, Big City's Chicago 80s oldies metrocast WXXY/WYXX is doing a public transit ad campaign right now promoting the fact that they stream the station at www.wxxy.com because the station simply can't be picked up downtown on the ground floor or lower levels (I'm picking it up right now from the clock radio on my desk on the 17th floor of a downtown office building, but it does cut out every so often, particularly on cloudy days). WXXY's 3kw (I believe) stick is out in Arlington Heights with the stick for the equally hard-to-pick-up-downtown sister CHR station WKIE (Kiss FM, also metrocast on WKIF in Kankakee and WDEK in DeKalb). WYXX's stick is in Morris, which isn't even considered part of the Chicago ADI. If it improves their sorry ratings performance after almost a year in the format, good for them (afternoon driver Fred Winston's hoary joke about his "three listeners" is almost true in this case).

Bless you! But, you're wrong. We DID discuss the assistance to LPFM program quite a bit when Bill moderated this group.
Ambulance chasing? Who's sick? It just appears that the LPFM applicants would require engineering services. What? You don't think so? Do the execs at the major corporations fill out THEIR applications? I doubt it!
Like it or not, an independent service HAS been legally created. I, for one, intend to help in any way, possible! And, yes, I DO intend to charge a nominal amount (much more reasonable than most are charging) for renedering services to this or any other cause. I believe that is called "The American Way of Life". Now, if you'd like to rail against it a little more, feel free to do so. We've also accepted THAT as a part of this "American Way of Life".
Oh... I'm sure that Rich Wood would (no pun intended) take my "Wood Bait" comment in the good nature in which it was intended.
Buenos Tacos to you, too!

You don't seem to NEED reminding. You and your cronies are doing quite
well in attempting to convince "poor unknowing US Citizens that they can
jump through the FCC's series of hoops WITHOUT any form of assistance and,
then, laughing like sick hyenas over the fact that a high percentage of the
resulting applications are technically flawed.
Congratulations!

Ambulance chasing is roughly defined as a dubiously ethical pursuit of personal gain.

The posting you made yesterday went beyond anything Bill ever permitted in my recollection. Before his sad death, any post that promoted personal gain generally appeared in the form of, "if you want to discuss this, e-mail me privately." Your post was a commercial, culminated by a fulminating broadside against the radio industry that was not just a tiny bit offensive to those of us who have worked hard, diligently and decently in the profession for many years. Or, perchance, do you like to be called a pimp?

Even the "Buenos tacos" remark is in poor taste.

I thought that through a mildly sarcastic comeback, you might see that your post was a bit excessive in content and inappropriate in the (purported) quotation at the end. I have nothing against your making a living; newsgroups unless otherwise noted, generally are not for sale of goods, personal profit or private gain. I've no trouble with brief announcements of services relevant to the group, though. I do find the occasional long-winded sales pitch out of place.

L.A. Radio Format Changes/Ownership News

From laradio.com:

KZLA General Manager from 1997-2000 (was P.D. from 1993-97) Dave Ervin has resigned for a new assignment in St.
Louis, whether that is. In 1997, when KBIG 104.3, then owned by Bonneville, and KZLA swapped physical facilities (not
formats) with their office staffs exchanging buildings rather than having their formats swapping, Dave was promoted to G.M.

Emmis, owner of Power 106 and now KZLA has promoted its own Vice President and General Manager Val Maki to the
newly created position of Senior Vice President and Market Manager (where do they come up with these new jobs?) of Los
Angeles. She will oversee both "Power 106" and KZLA. By the end of the month, Emmis is expected to officially take control
of KZLA.

KXMX McMix 95.9, which has a harder edge of mixing the music of the past four decades than its wimpy sister on 95.7 in
San Diego, is dropping the "Mix" format sometime in the next seven days in favor of Salem's (the new owner) Christian music
format.

Check out the preview of "The Fish 95.9" website http://www.thefish959.com/

The former General Manager at the old Mix at 95.9, Dawn McKahan, is now the General Manager of the new Mix, Cool
94.3, owned by the Astor family, which also runs three stations in San Diego.

KIEV 870 has launched two new talk shows and added additional live in-house produced newscasts. "The Hugh Hewitt
Show" now airs 6 a.m. - 9 a.m. and "The Bob Dornan Show" airs 9 a.m. - Noon.

Also, news from the Los Angeles messageboard has word that 93.5 has debuted a new Spanish music format on Monday.
According to the posters, the music either sounds like AC, Soft Regional Mexican, Nortenia Music. Appeals to all ages of
primarily Mexican Hispanics. A bit of a younger format than their Banda KLAX format. The station is calling itself "La Mejor
93.5" (which means "The Best 93.5") They're advertising 25,000 songs commercial-free.

Too Many Spanish Stations in Los Angeles?

Also brought up on the Los Angeles Messageboard is some news that while more stations are flipping to Spanish broadcasting,
lower ratings for the individual stations in the market is translating to fewer advertiser revenue, and is beginning to worry the
investors of the radio stations running the Spanish music formats in Los Angeles.

From a poster comes these examples:

BIG CITY(owners of Viva)-- its stock went from $9 in february to $5 in July
HBC--from $60 in April to $35 this month
SBS--its stock went from $40 in January to $12 dollars at the beginning of today's
trading day and falling.

Meanwhile, stocks for English radio station groups like Clear Channel, AMFM, Infinity,
Emmis and Radio One slipped, but they're recovering:
CCU--from $60 in March to $71 now
AMFM-from $58 in March to $66 now
Infintiy--from $29 at the end of May to $35 now
Emmis--from less than $30 dollars a share in march to $40 now
Radio One--from $16 in May to $21 now.

So how many stations are broadcasting in Spanish in Los Angeles? There's only so much Hispanic audience to spread amongst
the 20-something Spanish radio stations in the Southland including the recent entries at 107.1 (2), 93.5, 97.5, 103.9, 98.3, and
coming soon, 103.1 (2), joining the recent Spanish FMers at 94.3 in San Fernando, 105.5, 101.9, 97.9, and the granddaddy
at 107.5, as well as the AM's on 930, 1020, 1480, and too many others to count, plus the Tijuana stations at 950, 1090, and
more stations from Riverside and San Bernadino bleeding into Los Angeles. That's a lot of stations for a Hispanic to flip around
to!

Somehow, somewhere, a station or three will have to dump their lowest-rated Spanish language formats in town and go after
an English-language niche being ignored such as KNAC, Groove, World Class Rock, and KMET.

2893. A Listener? Wearing OUR T-Shirt? How Gauche!

Newsgroup: rec.radio.broadcasting
Date: 2000-07-15 00:00:00 UTC
From: z800525a@bc.seflin.org
Message-ID: <8kqeho$15p@nntp.seflin.org>
Source record: 18698

This radio station in the Tampa Bay area was doing an appearance at a car dealership near my home, so I figured I'd go down and check them out, maybe get some stickers and hopefully a t-shirt. I get there. My wife, who is in the market for a car, looks around while I shoot the breeze with the promotions guy...of course, the jock hides from the people. Promo guy hands out t-shirts to salesmen and janitors at the dealership...I ask if I can get one. He can't without asking the jock. (???)

Eventually the jock comes out after hiding for about two hours. He tells me only if I buy a car will I get a shirt...not everybody can just have a shirt, you know. (but I can have a microscopic-sized bumper sticker...*but* ONLY *one* out of a stack or a zillion)

Way to go...great way to treat listeners..oh, I forgot...my wife isn't buying that brand of car, either...and that's one station I don't listen to any more...

Looks like the business has definitely changed since I got out..guess listeners aren't as valued as bribing the employees of your sponsors and screwing us yutzes who actually show up to an appearance...

(To anybody at that station who reads this...guess what? Once upon a time, station t-shirts were actually given away to LISTENERS who showed up to appearances! Shocking, isn't it????)

I'm proud of you. Do you think that, just perhaps, the "mildly (actually "blatantly" would be much more appropriate) unethical terminological inexactitudes" practices by NAB and the broadcasting industry, in general rate any higher on the totem pole?
As I've stated to Rich Wood, in the past: There is NO personal gain in my LPFM ventures. I am simply asking to break even. This is the reason I'm taking most consultants' fees and deviding by "two" in order to come up with a reasonable fee. (Also, as I've mentioned to Rich, the software that enables me to do this cost a mere $14,990.00 wich, I'm sure MOST people would agree with, is an amount which SHOULD be gradually recouped through a system of "billing for services rendered". Or, has this, too, been outlawed by anyone other than "major corporations"? Is NAB planning to prosecute me and claim that I'm "interfering with licensed broadcasters" by attempting to aid in the licensing of new broadcasters?)
You know, I'd begin to understand tghis "keep out the PIRATES" attitude if the applicants were, indeed, "pirates". But, (and, I'm going to invoke another of Bill's Pfeiffers' arguements, here) does not the simple fact that the people have become just that (APPLICANTS) mean that they are not "pirates"? Have you all become so accustomed to screaming "GET LEGAL!!!" that you are blindly broadsided by the fact that the new LPFM service IS legal? Come on! you can't FIRST hold it against someone that, since there's NO WAY to do a thing legally, the proceed through DUE PROCESS and MAKE it legal... To me, that's a little bit like screaming at a drunk and telling him, "I'd hit you for drinking, but I'm afraid I might drop my own bottle of booze!"
We could all argue about the merits (and de-merits) of LPFM for months. But, personally, I'm now less than 30 days from seeing some of my stations issued CP's and built. (And, yes, I DID intentionally file for several in a few cities in which I've observed an extremely "low-life" attitude by some commercial broadcasters. I know exactly how to cut their throats, too. But, unless THEY push ME into that situation, I won't do it. On the other hand, they've already been dropping "succinctly and strategically positioned hints - otherwise known as threats" that they'll be finding each and every imaginary problem and complaining about it in the form of a "petition to deny"... Therefore, some very dedicated LPFM advocates will soon be getting "first-hand" training in the preparation and filing of a "petition to deny". Also, some "first hand" training in the inspection of public files, etc.)
Hey, I know, you're going to start crying "Foul! That's low!" and various other cries, but it's the SAME behavior that NAB is recommending for their member
stations. It goes BOTH ways... I'm just willing to make it go EVENLY both ways.
You see, there are more people than you who have dedicated many long years to this profession. Some of us don't like to kiss the various body parts

which seem to keep being exposed to us. Some of us actually LIKE to be able
to say, "My stations operate legally and ethically!" Instead of, "Corporate
told me to repeat that 'Our stations operate legally and ethically, AFTER
the corporate office OK's the rebuilding of the directional arrays, etc..'
Until that time, I'm afraid I've been told to say 'No comment'... But, I'm
supposed to also tell you that, anything that IS out of line, is MY fault
because corporate didn't release enough capital to meet our technical
budget, so we're seriously behind in that department but, since we own so
many stations, we figure the FCC will look the other way..."
Typical corporate crap...

> 93.5" (which means "The Best 93.5") They're advertising 25,000 songs
> commercial-free.

Actually, the "La Mejor" format is aimed older than KLAX. The music is called "grupera" and is a distinct format from any you mention. They play no norte�a at all; grupera is essentially a very Mexican form of pop which has a predominantly keyboard-based sound. Kind of Pet Shop Boys meet the Sierra Madre.

And they are doing 35 thousand songs in a row. At about 15 an hour, that
means close to 100 days commercial-free.
>

> today's
> trading day and falling.

Big City has failed to get any ratings in LA; the problems, though, are in Chicago and New York where they are doing poorly in English.

SBS announced lower than expected 3rd quarter results (non-calender fiscal year) due in part to the ratings declines they have had as well as high costs in their new Puerto Rico operation, wher ethey own a dozen stations. Thier ratings in New York are way off, too... so it is natural that they will have reduced revenues. SBS never stuck at $40... (actually, it was like $38 at a close of trading basis) as that price was registered in the few days after they IPOed and the thing leveled back to the low twenties soon after.

HBC stock is back in the 40s as of Friday.
>
> Meanwhile, stocks for English radio station groups like Clear Channel, AMFM,
> Infinity,
> Emmis and Radio One slipped, but they're recovering:
> CCU--from $60 in March to $71 now
> AMFM-from $58 in March to $66 now
> Infintiy--from $29 at the end of May to $35 now
> Emmis--from less than $30 dollars a share in march to $40 now
> Radio One--from $16 in May to $21 now.

CCU and AFM are still way off. AFM was in the 80's not so long ago, and CCU in the 90's. Emmis is at the point they were at the beginning of the year. Radio One, pre- split, was at ninty-something, or a split-adjusted 33 a share. they are way off now, and the B shares are around 19 for an average loss of about a third of share value vs. the peak. Infinity did not have far to fall, as they never increased after going separate form CBS... causing CBS / Infinity management to talk about refolding the issue back into the CBS/Viacom megacompany.

> Fernando, 105.5, 101.9, 97.9, and the granddaddy
> at 107.5, as well as the AM's on 930, 1020, 1480, and too many others to
> count, plus the Tijuana stations at 950, 1090, and
> more stations from Riverside and San Bernadino bleeding into Los Angeles.
> That's a lot of stations for a Hispanic to flip around
> to!

The TJ stations don't impact LA any more. The last time they did was when the local LA stations had such awful signals that the TJ ones were actually competitive. 950 is very localized to Mexican issues, and fairly irrelevant in LA or California. 1090 is starting to focus on San Diego, as their revenues have dropped to nothing from LA.

Only San Berdoo signal making LA is KSSE, which wil gang up with the 103.1 signals to improve the LA coverage (but not by much). So, 3 signals = 1

station. And the two 93.5 signals are one station, as are 105.5 and 94.3 as well as 98.3 and 103.9. Similarly, on AM 1330 and 1220 (Pomona) are simulcasts. 1480 is not in Spanish, has not been for about 3 years. It is in Vietnamese and goes as Vietnam Radio.

So, we actually have only about 11 real radio stations or separate format offerings... for 38.8% of the MSA population. Since several are signal impaired or partioal coverage facilities (KWIZ-FM, for example), there is certainly enough audience to go around. Expect more stations, not less.
>
> Somehow, somewhere, a station or three will have to dump their lowest-rated
> Spanish language formats in town and go after
> an English-language niche being ignored such as KNAC, Groove, World Class
> Rock, and KMET.

Using KNAC as an example, that station had a 0.9 when it got turned off. It now has abouty a 3.5 average share when combined with the 94.3 signal... a major number in LA today. KACE/KRTO had a 1 share or below as Urban A/C facilities... they now have nearly a 2 share in Spanish. Even KLYY is doing better in Spanish, although their 1 share is nothing great still.

All this tripe just because I commented on your posting a long, commercial, money-seeking message?

I never said anything for or against LPFM. (In fact, I hope you get an LPFM and that you do find some way to serve a community that is lacking in some type of aural service.)

I did say that I thought inappropriate and vulgar calling those of us in established commercial radio pimps, and mentioned that the "Taco"bit was tasteless if not offensive. You do not address that,a nd, instead, launched a monumental and repetitive diatribe about LPFM, which, as I said, I made not comment about in any way!

I rest my case.

OK. One more time. A "broadside" is a naval term from the age of sail...
when a ship opens fire ... oh, heck, you look it up. It means, in these
times, a broad-reaching shot, like a shotgun blast, against something or
someone. I was referring, in case you have not realized it, to the little
ditty of a quote in which broadcasters are called pimps.

If that is not a broadside, I need to throw out my Oxford Dictionary.

Sounds like a sucky station with loose supervision. Ain't supposed to be
that way. Neither the client nor the station benefits.

I'll bet if you forwarded your post to the manager of the station, you would
get a response... and the derelict DJ would get a little orientation!

No, the real question is how each one will evolve (Internet vs. aerial radio vs. satellite radio). Television became primarily an entertainment and news medium. As it matured into viability, network radio abandoned entertainment (drama, comedy, etc.) and stuck to music, talk, and of course, news. Music and talk were more suited to radio than TV; radio news is handy as you cannot watch TV in the car or while you're working.

What will be interesting to see is what will make it onto the Internet -- and how broadcast radio will react to it. There are some things the Internet, and webcasting on the Internet, can do more efficiently than broadcast radio. The reverse is true - there are some things that broadcast radio can do that the Internet can't, and I fully expect that some efforts to duplicate some of those services on the Internet will fail, or won't gain a large enough audience.

At this time, I cannot take the Internet in the car with me, or take it to the beach, or (practically speaking) on a camping trip. I can't buy an Internet radio for fifteen bucks and strap it to my belt. While the fidelity is getting better on the 'net, it still isn't where FM stereo radio is today. And it is difficult to reach huge, huge audiences with a single event on the 'net with the efficiency radio can. Heavy demand for a particular service, as Rich is quick to point out, can cause a webcast to bottleneck and degrade in quality.

However, broadcast radio cannot provide "on demand" programming as the Internet can. Broadcast radio spectrum is limited, but anyone can put a server on the web and provide streaming audio without having to worry about interference or licensing, a plus for niche broadcasters. And radio signals are limited in broadcast range, whereas anyone in the world with a net connection can hear a webcast. This makes it much more practical (economically and technically) for webcasters to reach a particular limited audience that may be scattered all over the world.

Some applications will be always be suited for a particular mode.

> radio business because of the internet.

Doug, I agree with you. You are using the technical advantages of both media.

My point is not that the Internet is better than broadcast radio. It's that webcasting can do some things aerial broadcasting cannot do. Aerial broadcasting can do some things that webcasting cannot. And there is an overlap.

One's not better than the other.. But one mode or the other is probably better, depending on what you want to broadcast and who you want to reach and when.

Thanks Tom. As for David E Gleason, I do not read his posts or the
profane E mail he sometimes sends but I can imagine what he said.
Without ever hearing what I do, he judges it regardless. Fine with me.
Yet dare speak one word against his beloved hispanic noise makers and
you are attacked!

He and others like him poo poo this format without ever having heard
it. It is NOT
like anything on the air today so how can the "whole industry" have an
opinion about it??? Enough, or I'll get some more filthy e mail from
this jerk.

Once again let me TRY to explain. I know full well Davis Eduardo will never understand what I am saying because he does not want too. He lies about what I do and that is his right if it makes him happy. My format is NOT like Stardust, Music of Your like or AM Only. If it were....he WOULD be right. THey are dreary and dead as doornails.

I guess it pisses him off that I found a way to make standards AND newer songs popular to BOTH young and old.

"Do you remember the following?

"Pop machines that dispensed bottles"

Still plenty of them around, dispensing 20-ounce bottles.

"Telephone numbers with a WORD prefix (WEbster 1265)"

Those were still common in some cities (such as Chicago) in the early 1980s.

"Conical TV antennas"

Channel Master still has them in their catalog, though they may be selling
from old stock.

"2 inch Quad"

Shocking as it may seem, WHAS-TV in Louisville was still tape-delaying stuff
on 2" as late as the mid-1980s. When they first started using stereo sound,
they had to use a 2" machine to delay Entertainment Tonight on some days
when all the 1" machines were being used for production during the afternoon
feed, so ET ran in mono on those days.

"LSMFT"

I believe that's still on the end of Lucky Strike packs.

These morons have run people off in droves with that BIG570 crap every 3 seconds. One morning I counted them saying "Big 570" 15 times in 60sec. THAT IS ENOUGH!!!!! I GET IT! And I shut it off!!!!

Wish they would give the KLIF call letters to someone else. When they do speak them once on the hour they distort them so they can't be understood.

I'll publicly clarify yet again that I have _never ever_ sent any mail to Mr. Finks containing any profanity. First, for those of us who know netiquette going back to The Well and BPForum days, unsolicited e-mail is considered rude. When I have asked Mr. Finks to produce such e-mails complete with properties, he has failed to do so.

I believe that most everyone on this group knows that I can be vehement in my arguments, and even a bit testy at times, but I don't engage in profanity and I don't spam members of this group with e-mails of any kind.

Funny, but all of this is over what the rest of the country has know for a decade: major advertisers simply refuse to direct messages at 65+ audiences, no matter how good the programming and well targeted the messages.

The "pimps" statement, to which you are refering is a signature which I picked up well over a year BEFORE I had ever heard of your name. Why on Earth you'd take it personally, I have no clue. Personally, when I see a statement of that nature and I know that I'm NOT guilty of said practise, I get amused by it. On the other hand, if I am guilty... I might be upset by it. Anyway, please accept my humblest apologies, if it offends you.
The "Buenos Tacos" is a quote from an episode of "Sanford & Son". It is a non-sequitor meaning, basically, I have nothing further to say, therefore, I shall say something that means, essentially, nothing. But, then again, this is open to interpretation and those who are inclined to see eveil in anything at all may do so. That is best left up to the individual's imagination.
Sheesh! I guess I'd better be glad I didn't say something WITH a modicum of meaning behind it. People get so offended by NOTHING these days.
Literally translated, it means: "Good Tacos"... (Actually, the Spanish translation should be "Taco buenos" as the Spanish language properly places the adverbs and adjectives (descriptive words) AFTER the noun... Who could possibly be offended by good tacos? Have you something against people of Spanish origin? Is it racial? (Before you go off on another tangent, I have just made a "tongue-in-cheek" comment that, to me, is about as based in fact as the "I'm offended by Good Tacos" thing...)
Now, if a "Quick Buck" is what I was after, my fee would be more on the order of $2,000.00 and UP (as are MOST engineers). Nope, I'm happy to break even with LPFM. My profits come from the commercial applicants (five of which I need to file during the next two weeks)... And, before you THAT route, yes, they are very aware of my LPFM work and do not object (probably because they are all independent of the big corporate stations, as well and have felt the "squeeze" that the big monsters are always applying. Similar to the days when Shell Oil would open a (nearly) wholesale gas & oil outlet next door to the local Mom & Pop gas station... You know: The "Wal-Mart" syndrome.
I don't know how to tell you this, but it would take a LOT more than the pitiful LPFM application fee that I am charging to "make a quick buck". In fact, a full 40% to 60% of my LPFM clients are paying NOTHING! Sounds like major money, huh? But, you know what? I can honestly say that I am HELPING someone and not many people can lay claim to that particular service, anymore. So, go ahead, flame me again for helping people. I'd expect that. Cut loose! But, I'll still be right here, helping people when you're gone. And (aside from people who seem to hate people who help other people) I'll have no enemies, either. Save for that which has been manufactured because someone, somewhere, thought that someone I had helped might cut into THEIR profits, so they got a little bent out of shape about it. That tends to happen. You see the same thing if you open a privately owned blackjack table next to a mafia owned casino...

As explained above: That is a quote which I picked up well over a year ago and, based on the ENGINEERING practices of several groups for which I've had the pleasure of working, decided was a very applicable statement. Such practices as inspired one of my former assistants to write the following:

The other day, my engineering companion at work brought something to my attention that I could not help but ponder...

Radio engineers work on an average of 60 - 70 hours a week, depending on how many and how often incompetent PD's call them in to do unnecessary work at the station. Engineering salaries throughout the country vary, but are generally pretty crappy when you consider the hours and knowledge that is put in by the individual to keep a multi-million dollar station on the air. Plus, once the work is done, even if the engineer has been up all night, and the past 2 previous days, management still wants to see him in the office the next day, and insists that the work that he has done is inferior.

On the other hand, a plumber can come into your home, spend 20 minutes clearing a clog, bill you $60 for the visit, and another $40 for the actual effort to clear the clog. In 30 minutes, he's made $100. The customer is happy to pay whatever the price is, just to get the clog taken care of, and will even thank the plumber for his valiant efforts in tackling the problem. At five o'clock, the plumber goes home to a family and a peaceful evening. Even if his company offers after hours service, he gets paid something called OVERTIME, to do this work, after hours.

Hmmm.....
A radio engineer at work = $10-$15/hour Over time? No.
A plumber at work = $100 - $1,000's/hour Over time? Yes.

Some words to students that may be soon graduating from college looking for a good, high paying job in broadcast engineering... don't waste your time - there aren't any. Especially radio engieering.

Here's some un-information about radio engineers:

Un-appreciated
Un-paid
Un-rested
Un-un-stressed

To you commercial broadcaster: When you look at each other wondering why broadcast engineers are becoming more and more extinct, look at the facts.

What would YOU rather do?

I think I'll just go become a plumber.

Go figure.....

Jeremy
radioman@bayou.com
Engineer turned plumber, KJLO-FM - The Radio People
Monroe, LA

I figure, since he posted this message on this forum, himself, on July 29, 1999 (almost exactly one year ago), it can't do any harm to be re-posted... (It also gave me a good excuse to dig out my old archives of this newsgroup! Bill was more of an LPFM advocate than you remember!)
This was written just after we had suffered the _FOURTH_ FM antenna "burn-out" due to an inability to convince management that they NEEDED to have those $22.00 nitrogen tanks replaced... The excuse we kept getting - even after the burnouts began - were something on the order of "Well, we'll let the insurance companies handle it when it gets to be a real problem. We'll tell them it was lightning because, those old antennas need replacing, anyway... And, that way, it won't be up to us to pay for them." (I WON'T mention the owners name here - in order to protect the guilty, unless challenged to do so, as I have this particular little ditty on a micro-cassette tape, in order to protect myself after the fraud started... But, I'd really rather NOT be forced into posting that.)
But, if you call or e-mail them to verify this, ask about the 12 kW. class A and the directional AM that only had one tower connected (kinda) for two years... Or, how about the EAS system that wasn't (and they're the LP-2 station for that area)...
I've seen others equally bad so, yes, the term "Pimp" does, indeed, seem to fit this particular type of broadcaster. Only, it's the FCC, other stations, the advertising clients and the listening public who get scr*wed, here.

This is getting fairly hopeless... but I'm waiting to send some international faxes until the rate goes down and am in need of a tedium relief, so...

Again: I simply make a remark about your posting of a long, crassly commercial post on a newsgroup that is not supposed to be used for such. Your response was a diatribe about LPFM, something I have abstained from commenting on for months and months in an effort to control futility in my life. And you closed the remark with references not kind to broadcasters, a reference I had not seen before. I thought it awkwardly and misplaced. My opinion. I know, everybody's got one of those, too.

Then, you, Terry, posted...
"Broadcast Services" <hawkfm@peoplescom.net> wrote in message news:wPbc5.3302$iT6.7979@dfw-read.news.verio.net...

> Sheesh! I guess I'd better be glad I didn't say something WITH a modicum

fact
> as the "I'm offended by Good Tacos" thing...)

Is my middle name any clue? Psssst: it's a Spanish name! No? Yep. Sure is! And I know that, syntax mangling or not, it means, "good tacos." When said to a person who prefers Spanish to English, it comes across as patronizing. If that was not you intent, so be it. It is, like I'm increasingly seeing in your postings, reflective of less than perfect sensitivity.

> Now, if a "Quick Buck" is what I was after, my fee would be more on the

I didn't ask or comment about LPFM. Since 60% of the first round are being applied to by religous organizations, amny of which are affilitate, it sure looks like more of the same K0Love satellite stuff to me... but I really don't want to go there. Even Congress can't seem to figure this one out and most of the applications are tecnically defective anyway... let's see what happens 90 days form now and then hash this one out.

> I don't know how to tell you this, but it would take a LOT more than the

> anymore. So, go ahead, flame me again for helping people.

Yoo Hoo! Al�! I didn't have anything to say about LPFM (Figuring out how to say this in ever different words is kinda' fun, ya' know?). And the fact remains that you were tootin' the commercial horn in a newsgorup that has usually frowned at such blatent self-promotion. Oh well, maybe I'll be selling something and repent a year from now. Compiled hits of M�xico City a la Whitburn, anyone?

>I'd expect that.

Ahhhh... Just keep in mind: The above material was NOT written by me. It is quoted freom someone else. Generally, I've found that program directors are ANYTHING but incompetent. They're actually geniuses and, given the chance, they can prove it... The guy that wrote this, wouldn't allow them to prove it.

Len,

It's also amazing to hear some people use the expression "the laws of physics" over and over again, in complaining about LPFM and the havoc it will wreak. However, I am still at a quandary to figure out how these religious satellators somehow are immune from those same laws of physics, because I've heard nary a complaint about them from the same LPFM opponents.

I, too, am really turned OFF by the new BIG 570. I used to enjoy listening to Norm and Kevin and a couple of the others. But now, the only time I listen is on Saturday mornings when Ed ("Let me promote the Japanese car companies") Wallace. However, even he is getting a bit too much anymore.

I hope they wake up over there. Now would be a great time to switch to an all-news format. No. That's too logical.

2916. How to Stop Including Messages in Outlook/Outlook Express

Newsgroup: rec.radio.broadcasting
Date: 2000-07-16 00:00:00 UTC
From: Doug Joubert <djoubert@mindspring.com>
Message-ID: <000601bfef38$4cb683e0$0884cdcf@i1p4e0>
Source record: 18622

With only Outlook or Outlook Express open (don't open any messages and try to do this from the message. The menu isn't available), click on "Tools" at the top of the screen. Go to "Options". You'll get a number of tabs. Click on the "Send" tab and you'll find a number of boxes checked and unchecked. If the box with the words "Include Message in Reply" is checked, uncheck the box. Then press the "Apply" button before pressing "OK" at the bottom. Now messages from whomever you were replying to will NOT be included in your reply.

Hope this helps.

Doug,

The problem with that solution is that it is really hard for most people to understand a reply unless it is given in the context of at least a snippet of the original message as reference. It's fairly easy to select the parts that are irrelevant and delete them from a "reply to group" post/response. There is a frequent poster on another group I visit (alt. culture.argentina) who never cites text from the message they are responding to and who also tends to go off on tangents at times. Without a citation, it is very hard to tell what they are talking about!

That may be true, but Milton's station is a non-com, just like the LPFM's will be. Selling spots isn't an issue. Reaching an underserved audience is the whole point. From what I can tell, Milton's station seems to be doing that.

Obviously big broadcasting has chosen to ignore a significant (and growing) part of the population because it has poor financial returns for them. That's just the way business is. When they figure out that everybody seems to be getting older, I'm sure they will respond with plenty of commercial programing so they can keep up the payments on their facilities.

In the mean time, I'm happy that Milton and a group of potential LPFM licensees are actually addressing (or planning to address) an audience that has been ignored.

That I was unaware of. That is a truly good use of noncom channels. I'm less than thrilled to see that the major portion of the California LPFM applications are from reliegious groups, many of whom apparently used local churches to file on their behalf. I think that it is a fairly safe assumption that many of these will use networked programming most of the time, as the question will be how many local congregations can proved 15 or 16 hours a day of local content consitently?

Formats designed for unserved groups is a good use for LPFM if the stations can technically cover significant concentrations of these groups. I was actually somewhat dismayed by the closing of Spanish language pirates in Detroit and Kansas City (to name two that pop to mind) as these are markets that would be hard pressed to justify the value of a commercial signal vs. the gains form broadcasting to a small ethnic population. Given that many of these groups don't have the resources to use webcasts, which are not local anyway, it seems that there should be some vehicle for programming aimed at the elderly, ethnic groups that want and need some vehicle for their cultural expression, and similar segments.

I know, saying I sympathize with pirates is strange... let's say I recognize the frustration of the community although I can't quite condone the methods. This is somewhat like the immigration dichotomy where the economy depends on illegal immigrants yet, well, they are still illegal.

I stop at advocating piracy or LPFM because someone does not like the mix of music on thier local rock stations, or feels that some town in the Plains needs a fulltime reggae voice. that is a question of taste, not of underservice to a specific group.

I was unaware that Milton's station was noncom. I actually congratulate him and the licensee for finding something different to do with this type of

station... something that is of great benefit to the population. It seems that many noncoms, in the Pacifica mold, seek to be so esoteric as to be unappealing to most people... as witnessed by the very meager ratings stations like KPFK generate. On the other hand, a "standards" format, or whatever is the preferred name today, is a real service for a lot of people and provides much needed entertainment for htose groups. Entertainment is not an evil goal, in fact, it is quite noble.
>
> Obviously big broadcasting has chosen to ignore a significant (and growing)

caused in no small part by the tendency for media buyers to be just-out-of-college folks in thier first career postion with a lot to learn about demographics.

>When they figure out that everybody seems to be
> getting older, I'm sure they will respond with plenty of commercial programing
> so they can keep up the payments on their facilities.

It would have seemed that way as far back as the late 80's. Still, look how many MOL and standards stations have gone away, and how few have appeared. I don't think it is due to blanket incompetence at the station level. The fact remains that in the major markets, agency and national business is where the money lies, and if very few accounts go after 55+ demos, there is no way to make these things work well given the current high valuations on facilities. Vicious circle, fer sure!

Well, please excuse me... I was unaware that this was your true "given
name". Let's not forget that MOST programming type people, in this business,
choose a name out of a hat. I've worked with "Abdul" from Iowa, Juan
Hernandez (from Mobile, Alabama), Chief Walking-Bull (from London, England -
believe it or not) and several others whose names were NOT an accurate
indication of their nationality.
I guess my problem (if you can call it a problem) is that I am not a
"racially biased" person. As far as I am concerned, you could have three
eyes, 5 arms, a pair of wings, fins, gills, no legs, and oxygen absorption
membranes in the place of lungs and nostrils and I'd still treat you the

same as everyone else. To me, color, race and/or nationality never even enter the equastion. It's just not something that I've ever concerned myself with... I'd like to think that some people, at least, would see this as "racial and national equality" and not as a "lack of sensitivity" and realize that it's a thing we've all been striving to accomplish for decades, now.

Yes, I must admit that a great number of people, here, do help. They help NAB, AM/FM, JACOR, CCC (hmmm, ad a "P" to the end of THAT one and what have you got?), and numerous other major corporations in multiplying what was, at one time, an illegal stranglehold on the nation's media. Ever wondered why it was illegal UNTIL NAB and the "groups" started to "spread around the dough"? There's a very good reason for that but, as our government transitions more and more socialist on a daily basis, they are realizing that "Media Monopoly" equals "Media Control". Hey! They can CONTROL what information gets to the public and what information is "squelched". It's a fact of life!
Now, if the "higher ups" in these "Corporate Radio Monsters" are made VERY rich and VERY happy about what they've achieved, they'll use their own money in order to "pay" for keeping their powerful status and their big bankroll. Result: Government controls all media through a bunch of "Fat Cats" who could care less because they're really unconcerned with anything other than bragging about "How GREAT this corporate monopoly (that SHOULD still be illegal) is."

>You do your thing,
> but, please, don't think you have a monopoly on virtue or an absence of
> blemishes.

I AM "doing my thing" by attempting to get normal, everyday, law abiding citizens to excercise a constitutional right in applying for very legal broadcast licenses. however, your NAB has already crippled THAT effort by making the new service (with the help of your favorite defendants: the "Corporate Radio monsters of Amerika") very unattractive to anything other than churches, civic groups and the likes. To which you all respond "Only Churches are applying!" To which I respond, "But, they've done this for YEARS! Why complain, now?"
Bottom line, here, is this: NAB and broadcast groups have created this monster as a "Churches only" service. I guess they're pretty well proud of themselves for that. well, I intend to see to it that, the licenses that are granted are as viable as possible. I do, sincerely, doubt that these groups

can continue to "rip-off" their clients and maintain the cash overhead that they've heaped upon themselves. ESPECIALLY, in the light of "re-regulation" (which WILL be coming, soon)...

If you look at the Maryland/DC LPFM applications, nearly all of those
that come even close to meeting the allocations requirments are from
religious-oriented outfits. They are the ones that seem to have done
their homework before applying.

All news could be a really great use of the killer signal that 570 has
(it is the third best AM signal in DFW after 50 kw 820 and 1080), and
since Susquehanna is a privately held company, they could take the time
that it would require to grow such a station until it is successful.

As things stand right now, they could put almost anything on this signal
and improve it's standing -- a 0.7 in the latest Arbitrend is amazingly
bad for this strong of a signal. I suspect they could get higher
ratings running a music format on this station...

Came across this in email to me earlier today... A truly depressing condition down in Texas...

This makes me -glad- to be out of the broadcasting business ....And especially the cable side of broadcasting.

Time Warner's Struggling News Channel Lashes Out at Defectors

The Austin Chronicle
July 14, 2000:
BY ERICA C. BARNETT

When you think of money-grubbing TV personalities, chances are Jenny Hansson isn't the first person who pops into your mind. Chances are you haven't even heard of Hansson, an ambitious young reporter who left her job covering business news at News 8 Austin last month. In fact, chances are you don't even watch News 8, the 24-hour cable news network run by Time Warner that debuted around this time last year; with four network news programs competing with the no-frills, all-news station for viewers, few people in Austin do. And if you have seen Hansson, you certainly won't remember her as a glamorous, perfectly coiffed onscreen "personality"; her major job duties, in fact, involved lugging a 40-pound camera through the streets of Austin, then setting it up, then filming herself for a segment she would later edit back at News 8's studios. In TV news lingo, Hansson was a "one-man band" -- a common occupation in smaller markets, but almost unheard-of in major markets outside Time Warner's handful of cable news stations across the country.

The work, as anyone who's done it can tell you, was grueling. And the pay was low, no more than $12.50 an hour for a seasoned videojournalist. Few reporters will stick it out long enough to reach that level by choice. Maybe that's why Time Warner felt it had to lock its employees into lengthy (by any standard) three-year contracts, and why it has shown an unusual willingness to try to ensure that its employees stay loyal. In Hansson's case, that meant suing the wayward reporter, who left after less than a year at the station, for the astonishing sum of $50,000 -- more than twice her annual salary, which amounted to around $24,000.

"If I lose [this lawsuit], I'll have to file for bankruptcy," says Hansson, who is currently working as a reporter at Fox affiliate KABB in San Antonio. "I have credit cards; we had to buy clothes to wear on-air. We had to look nice ... have a lot of bills already. I have $30 in my checking account."

A Binding Contract

The fact that the lawsuit has even been filed (by local heavyweights Fulbright & Jaworski, no less), more than the amount Time Warner is seeking, says everything there is to know about the cable behemoth's attitude toward recruitment and retention. Hansson's contract -- a maze of confusing legal terms and clauses setting limitations on her future employment -- is written in a manner that virtually prohibits her from leaving News 8 for any reason until the term of the contract is complete. The relevant portion of the contract -- the part Time Warner is suing Hansson to uphold -- says she can only leave the station to be a videojournalist (a term Hansson's lawyer interprets to mean a one-man band) for a TV station in one of the 30 largest markets nationwide. If Hansson had wanted to leave TV news altogether, in other words, under the terms of her contract she could not. In return, the contract promises Hansson regular yearly raises of less than 35 cents an hour.

"This contract restricts her from taking a job as a reporter at any other station, or any other type of occupation, whether it's waiting tables at the Hula Hut or working at this station in San Antonio," says Hansson's attorney David Brenner, who notes that only five or six top-30 market stations fit the criteria of Hansson's contract. (According to data from online employment service Tvjobs.com, San Antonio is ranked 37th in the nation; Austin is No. 61). "If George Bush decided to appoint her to be a judge in Travis County, she couldn't accept because it would violate the terms of this contract ... This is more restrictive than I've seen before with most other companies." Unlike a "noncompete" clause, which restricts news personnel from working at competing stations in the same market, Hansson's contract restricts her from working anywhere else at all.

Some attorneys would argue that Hansson should have looked a little longer before leaping into bed with a smart, contract-savvy company like Time Warner. David Sokolow, a contract expert and professor at the UT School of Law, notes that there aren't many legal barriers to keep people from signing bad contracts. "If you sign a contract saying that you're going to stand on your head in my office for eight hours a day, maybe that's a stupid thing to do, but you're contracted to do that," Sokolow says. Not having a lawyer or legal expertise, Sokolow says, is no excuse for making a bad decision. "She takes their money in return for signing the contract, and she accepts the terms of that contract. If you don't like the terms that are offered, you don't have to accept." Brenner, however, points out that Texas law requires the provisions of contracts to be reasonable, and he argues that the contract should be declared invalid because it would lock Hansson into three years of virtual servitude.

Are Damages Warranted?

But while the validity of Hansson's contract may be open to discussion, the amount Time Warner is seeking -- which Hansson says grew from $8,000 to $15,000 to the $50,000 cited in the suit -- seems like a rather princely sum to ask from a reporter who, even at her new job in San Antonio, isn't exactly eating caviar for breakfast. According to the lawsuit, Time Warner's attorneys came up with the $50,000 figure by adding up the cost of advertising for a new person to fill Hansson's position,

the cost of bringing people in to interview for her job, overtime paid to other employees until News 8 finds a replacement, and the cost of training a new employee. Moreover, the lawsuit says, "News 8 cannot train another employee like it trained Defendant." (According to several current and former News 8 employees, Hansson's "training" consisted primarily of participating in a group lecture by a media expert from the St. Petersburg, Florida-based Poynter Institute, who was flown in to speak to News 8 hires when the cable channel hit the airwaves last September.)

Could Hansson's training and the cost of hiring her replacement really add up to $50,000? According to Sokolow, Time Warner will have to go further than it has to justify the amount they're seeking from Hansson. "I can't believe they're bringing a lawsuit against her. That amazes me. But under the law they can do so if they wish to," Sokolow says. "But $50,000 -- I don't know how they arrived at that figure. If they arbitrarily picked that figure out of a hat ... that's clearly unreasonable." If Hansson were a major personality like Oprah Winfrey or Sam Donaldson, the damages might be reasonable, her attorney adds. But as a cable news reporter on an obscure business beat in Bastrop County, Hansson's chances for fame or personal recognition -- even on a local basis -- were slim at best. (If Time Warner has its way, though, that may change: Lately -- perhaps to establish its employees as bona fide "personalities" rather than as camera-toting flunkies -- News 8 has reportedly begun running regular promotions on other cable channels featuring its onscreen reporters in prominent roles.)

Employee Relations

Officially, News 8 isn't commenting on the lawsuit. (Time Warner's lead attorney, Brian Greig, referred all questions to News 8 management.) But in general, News 8 general manager Brian Benschoter says, the station uses lengthy contracts to increase the "stability" of its reporting staff. "You have to live in a community and know all the players and really know the context to do this job," Benschoter says. "The product gets better as the staff gets more experienced. Any time you lose folks you lose a little bit of that collective memory."

The collective memory of News 8's staff is, to put it charitably, fading fast. It's not just that the station tends to hire reporters who are a little "green" to start with -- the same could be said of virtually any news program in Austin -- but that, by all accounts, even people without a life preserver in hand are jumping the station's ship. Although Benschoter insists turnover has been "pretty limited," one current News 8 employee (who requested anonymity) paints a grim picture: "I'd say that the vast majority of people, maybe 95%, want to leave," the employee says. "Everyone is making plans to get out of here." The reasons, the employee says, are simple: too much work for too little money and recognition. "We sit in a chair for 12 hours, five days a week, and we don't get a break," the employee says. "We're very understaffed ... Everybody does three jobs. The reporters do their own camera work and the directors roll their own tape ... We're just worn out, mentally and physically worn out."

Hansson -- who says her new job offered a 180-degree change from the working conditions she faced at News 8 -- recalls one particularly grueling summer day when she had to walk up the steps at Mount Bonnell -- all 100 of them -- "carrying 65 pounds of equipment in high heels and a skirt." Before long, Hansson says, the quality of her work had started to suffer. "If you're interviewing someone who's grieving and your audio won't work, you don't want to have to say, 'hold on while you're crying about your dead brother while I fiddle with my audio,'" she says. "It's hard to focus."

At other Time Warner cable stations, one-man bands have been replaced by more traditional teams of cameramen and onscreen reporters. But at News 8, it seems, only the contracts have changed. In some cases, the aforementioned employee attests, they've gotten longer; in others, News 8 management has tried to convince employees who weren't previously bound by contract to sign lengthy agreements in hopes of getting them to commit to specific employment terms (including fewer "outs," or terms under which an employee can leave without penalty) and rigid, non-negotiable pay increases. Once problems started emerging, the employee says, station management simply tightened its grip. "Once people ... started to leave, they made the contracts longer and the outs harder for people to get," the News 8 employee says. "But if you want to get out of a job, they should let you out. What are they going to do, handcuff you to an edit bay?"

Shani Walls, a former News 8 afternoon and weekend anchor who left the station for a head anchor job in 118th-ranked Fayetteville, Arkansas, takes a more sanguine view of her time at News 8, calling it "a very unique experience" that she wouldn't trade for anything. "It made me a stronger anchor," Walls says. Although she acknowledges that the schedule she worked -- from 9am-4pm on weekdays, and 4am-2pm on Saturdays and Sundays -- was "pretty erratic," she notes that odd hours aren't unusual at cable news stations, especially those that are on the air 24 hours a day. "It was very difficult for me to work those kind of hours; I'm not 25 any more," Walls says. "But I knew that when I took the job; it's just the nature of the business." And for all its problems, News 8 is still the only channel around that offers hard news without resorting to sensationalism -- the product, according to Walls, of former news editor Carla Fields' dedication to "local news done right." Fields left the station after four months to take a position as national news director at a Palm Beach, Fla.-based Internet company that produces a syndicated series on personal finance.

Hard Times Made Harder

Around the time that Hansson announced her resignation to News 8's general manager, another News 8 employee named Lance Cook was going through a series of personal problems that would force him to quit his job as News 8's network administrator, a position he had held for only five weeks. First, his mother, who lived with Cook and his wife Marcy, fell ill, leaving the Cooks without day care for their eight-month-old son. All the local day cares Marcy Cook called had waiting lists of six months to a year, so she had little choice, she says, but to quit her job as a device

engineer technician at Samsung and take care of her son. Then, a day after she was released from the hospital, Cook's mother decided to move out of the Cooks' house to a smaller place of her own, taking some $700 in income she had contributed to the household each month with her. And to make matters worse, the Cooks' latest property appraisal had sent the value of their Northeast Austin house skyward, increasing their house payments by some $200 a month.

With their total income cut by almost $55,000, the Cooks felt Lance's only option was to quit his job at News 8, which he had taken as a stepping stone to a new career in network technology, and take another, more lucrative job as an equipment technician at Applied Materials, doing essentially the same work he had done before he was hired by Time Warner. Unfortunately, like Hansson, Cook was also under contract -- for three years, a period Cook's lawyer says is "real unusual" for an administrative employee at Cook's level.

To Time Warner, the reasons for Cook's resignation didn't matter: By their reckoning, a breach of contract was a breach of contract, extenuating circumstances be damned. "I told [GM Brian Benschoter] I'm going to have to quit because I don't make enough money to pay my bills," Cook says. "And he said, 'Well, you're under contract ... We're going to take this up with our lawyers.'" It was not an empty threat. Two weeks after Cook put in his resignation, on June 8, Time Warner sent the engineer a letter demanding $10,000 in restitution; in exchange, the letter said, the company would let Cook out of his contract with News 8. "Failing this," it continued, "the Company feels it has no choice but to go to court to compel you to follow the terms of your Employment Agreement."

Benschoter "took it up with his lawyer and his lawyer sent out this letter saying ... you can't quit. And not only can't you quit, you can't work for anybody else either," Cook says. "I can't even work at Baskin-Robbins part-time." After three weeks went by without payment, a local attorney for Time Warner, John Jacks, from the law firm of Gray & Becker, made the threat of a lawsuit official, demanding $2,500 -- in addition to the $10,000 already requested by Time Warner -- for "necessary and reasonable attorney fees" associated with the firm's representation of Time Warner, as well as any other fees incurred "for prosecuting such a suit."

"If we had that kind of money he would have never had to quit," says Marcy Cook. "If I had that in my savings account, I could have wrote them a check, but I mean, come on -- nobody does."

Certainly not the Cooks. Lance Cook made $38,000 a year as a network administrator for Time Warner, a sum he says worked out to about $12 an hour for the amount of time he put in at the station. How that works out to $10,000 in damages, he says, is anybody's guess. "I couldn't see [Time Warner's damages] possibly being more than I got paid in the time that I was there. How can they charge me more than they paid me?" The $10,000 figure certainly wasn't the cost of Cook's training, which he says was "minimal," no more than 10 hours total in the seven weeks he was there. And it wasn't in line with Cook's experience as a network administrator,

which he says Time Warner could get for "a dime a dozen."

Cook's attorney, Shelly Fristoe, says he'll ask Time Warner to justify their claim to $10,000 in damages and $2,500 in attorney's fees. "I know Gray and Davis, and they're a good law firm, but he's going to have to have an amazing billing rate to charge $2,500 just for reviewing the contract. I don't know how this amounts to $2,500 worth of 'reasonable' attorney's fees." Moreover, says Fristoe, once they knew Cook was quitting, Time Warner made no attempt to reduce their damages by hiring a replacement for Cook to train. "Under the law you're required to mitigate your damages," says Fristoe. "You can't just let them build up and then later sue for that." He adds that, while he's focusing his energy for now on fighting the $10,000 charge, it's also possible that a court will declare the entire contract void.

Quite apart from the money is the question of whether Cook's contract was reasonable -- or even enforceable -- in the first place. According to Fristoe, the document was a cookie-cutter replica of contracts signed by onscreen TV personalities; it included clauses about intellectual property, accepting "payola," and Time Warner's exclusive right to Cook's televised image. But as a network administrator, Cook rarely went near a TV camera, and never appeared onscreen. "They've just plugged in this guy's job description into a contract that is clearly meant for an on-air TV personality," Fristoe says. "He was a network administrator. When is his face going to be on TV?" But the contract's benefit to Time Warner was clear: It locked Cook into a three-year term under extremely stringent conditions, but didn't afford him the bargaining power a more seasoned TV news employee would have sought. "Apparently they've used this contract to bind all these employees to long-term contracts at low wages," Fristoe says. "This contract is an employer's contract. The employee has very little bargaining power. He has the right to seek counsel to find out about what's in this contract, but you're not going to find people at his level of employment who're going to do that."

At its heart, Cook's case comes down to what lawyers call "impossibility of performance": Due to extenuating, unforeseeable circumstances, Cook could no longer perform the job he was hired to do. That, at least, is the defense Cook and his attorney plan to raise in court, if the case does go to trial. But in a larger sense, both Cook's and Hansson's cases come down to basic issues of fairness and reasonability: Is it reasonable to single out two employees who were in other ways exemplary, just because they wanted to get out of their contracts? Wouldn't it be better -- both for Time Warner's image and for its workers' sanity -- for Time Warner to offer its employees a reasonable opportunity to buy their way out of their contracts, or to include more "outs" in its contracts in the first place?

Shelly Fristoe thinks so; he's been practicing employment law for more than 10 years, and he says he's never seen a case like this one. "This is the most offensive thing I've ever seen," he says. "It just reeks of megacompany bullshit." And he sounds willing to fight Time Warner to the bitter end to prove his point. "If it ain't illegal, it just ain't fair,

it just ain't right. That's the bottom line. If they want to spend all this money and take these poor folks to court and have 12 jurors here in Travis County tell them they can do that, then, you know, times have really changed here in Austin." [end story]

2924. RCA AM transmitters

Newsgroup: rec.radio.broadcasting
Date: 2000-07-17 00:00:00 UTC
From: gbowne <gbowne@email.msn.com>
Message-ID: <03aa14033041170CPIMSSMTPE01@msn.com>
Source record: 18630

I have an interesting chance to purchase some nice RCA AM transmitters from the 1940's to 1950's (and possibly earlier) in various stages of completeness very, very cheaply before they are broken up for parts and surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,
Gregory Bowne

With only Outlook or Outlook Express open (don't open any messages and try to do this from the message. The menu isn't available), click on "Tools" at the top of the screen. Go to "Options". You'll get a number of tabs. Click on the "Send" tab and you'll find a number of boxes checked and unchecked. If the box with the words "Include Message in Reply" is checked, uncheck the box. Then press the "Apply" button before pressing "OK" at the bottom. Now messages from whomever you were replying to will NOT be included in your reply.
Hope this helps.

Never thought it would happen.. but I logged a California FM station this evening.

Nice little sporadic-E opening to Albuquerque got cranked up around 8pm CDT. Around 8:45 it began to collapse, but brought some weak Arizona signals in on its way out. Just after 10:00 a station on 96.5 was heard to say "Kixie 96.5 Summer Cash Splash", followed by an ad for the "Sunglass & Optical Warehouse". It was then buried for a few seconds by splash from the 58KW station 20 miles away on 96.3, resurfacing with a promo for the kyxy.com website.

The "Cash Splash" does appear on that URL (you have to dig around in the prize closet a bit) - and a web search for "Sunglass & Optical Warehouse" returns only one location - in San Diego.

It would certainly appear I heard KYXY 96.5. According to my calculations, their transmitter is 1,724 miles away. My best DX by 300 miles. Heck, California *AM* is good DX here. California *FM*?!

Most such units will have all the oil-filled transformers and oil-filled
capacitors removed before you receive the units.

This is part of decontamination for removal of PCBs.

It would be economically impossible to restore to service a 50- or 60-year-old
transmitter that had been decontaminated as described.

And it would be legally foolish of any licensee to donate or sell an intact
unit, unless it was certified PCB-free.

Your legal department should perform "due diligence" before you get further
involved in what is likely to be an expensive proposition.

>

Thanks.

Pirate radio was great, although its always possible to hear Keith Skues every weekday night on BBC Eastern Counties - great programme. Alas though here in South-East London all the stations you can get BBC Eastern Counties on tend to be obliterated by present day FM pirates.

Eg BBC Three Counties Radio from the Zouches Farm tx (103.8 500w) always disappears at around 2130 under M-Power Radio from Stepney, BBC Essex FM's 95.3 (South Benfleet 1.2Kw) and 103.5 (Great Braxtead 12Kw) usually are totally inaudible due to adjacent channel interference from pirates.

The point of this is that FM radio in Greater London is a mess, particularly if you want to hear FM stations from just outside the Capital.

Do North American cities have the same problem?

NASDAQ is Free??

>True - but the INFORMATION comes from the 'net. Even the "stock market reports" that
>are compiled are done so by reporters with 'net access.

Just because they have access to the Net doesn't mean it's their
source. Any serious financial writer takes the net's information with
a grain of salt. Billy Bob can set up a financial web site. It doesn't
mean Billy Bob has the faintest idea how the market works. It's not
very good information. A friend of mine accurately calls it "the
pooling of ignorance."

The net is just another way to distribute information - accurate or
not. The net isn't everywhere. The net isn't mobile. Let's see how
well my WAP-enabled cell phone or my Palm VII works in Third World
nations. Radio works there. Radio actually is everywhere. Shortwave
radio has been a lifeline for those places for decades.

Radio isn't going away any time soon.

Doesn't chap my butt at all. The Internet is fascinating. We're a
better business, partly, because of the flood of dotcom dollars (cash
up front). Internet companies realized no one was going to visit their
sites unless they advertised. Contrary to the ambulance chasers who
feed on "listing your site on billions of search engines." Sort of
like LPFM ambulance chasers offering free services for a price.

The net makes information gathering easier when professional
newsgathering organizations publish on the net. APBNews was a great
service, just not supportable on the net. I wish they had made it.

I've been on the Internet since long before it was easy. Its growth is
wonderful. Its the predictions of awesomeness that get tiring after a
while, particularly from people who have no knowledge of the
businesses they claim will be put out of business.

Two weeks ago the same thing happened on FM here in Massachusetts - I was receiving Florida and Georgia FM stations on the drive home. I came home, disconnected the cable from the TV and hooked up the rabbit ears and there was a complete mish-mash up through channel 6. Generally, when E-skip occurs, the maximum usable frequency doesn't rise above channel 3.

At least TRY and get it right, Rich: "Those who CAN pay, do... Those who
CAN NOT pay, do not." I've demonstrated this to you, time and again. It's
beginning to look as if you either can not read the language or simply can
not comprehend and interpret basic english after you do read it.
You are demonstrating the very attitude that LPFM applicants are seeking
to counter-program: "I say you are saying THIS even though you're telling me
that you're saying THAT! Therefore, you don't really mean what you're saying
and you DO mean what I say you're saying! And DON'T try to tell me otherwise
because I know what you're saying BEFORE you say it!"
There's a REALLY neat little discussion of your profession going on over
on rec.radio.amatuer.antenna right now... You should look in on it (but, I'm
sure that you'll have SOME excuse to not chime in)...

Another Rich Wood misinterpretation (fear)? I never said that the Internet would put the radio industry out of business. READ THE MESSAGES, RICH. I did say that it might effect some changes in what radio does and how it does it, just as the introduction of television did, and FM radio, etc.

And I also said as Bill Kennard did, that the broadcast industry is best poised to exploit webcasting, just as the radio industry was best poised to exploit television in the late 1940s. But they're not doing so, but leaving it to others (in general).

First, don't ever tell a radio station to "lose its locality."
Locality and localism are the greatest strengths radio has over any
other medium.

Advertisers buy specific cities, regions or networks. They spend a lot
of time directing media buyers on where their spots are to air. Some
contests are regional, some products are regional and allmost all
airline spots are very, very specific to city. Very often an
advertiser will black out a city for testing or legal reasons. The net
creates some serious problems for advertisers. The small number of
listeners offered on the net doesn't offset the problems it creates.

>No one said it would SUPPLANT them. Just as the Internet isn't going away,
>neither is radio broadcasting. Webcasting COMPLEMENTS aerial broadcasting. It
>can deliver something and provide services that radio, due to its technical and
>economic limitations, can't.

What technical and economic limitations? There's nothing I know of
that's as economical, per listener, as radio. Ask any webcaster what
it costs to reach a listener. Ask a listener what it costs in
equipment and effort to listen on the web. My radio station has an
average quarter hour in the hundreds of thousands. What would it take
on the web to have that many simultaneous listeners?

Let's make it easy. What would it cost to reach 1,000 listeners on the
web, compared to radio? Remember, you have to each them before you can
sell to them or offer niche programming.

This is confusing. The complaint usually is that there are cookie-cutter formats. If this were true, putting up an antenna to receive a distant station would bring in yet another cookie-cutter station.

Never did. Radio has a locality. It is an advantage AND a disadvantage.

> What technical and economic limitations? There's nothing I know of

Can your radio station afford to do, say, a prime time hour on comic book collecting or antiques, or any geographically distributed niche audience, for that matter?

Can your radio station provide "on demand" programming for the convenience of the listener as an Internet webcaster can provide?

Can your radio station reach listeners in Johnannesburg and Perth and Los Angeles at the same time?

Those are the technical and economic limitations I was referring to.

> Let's make it easy. What would it cost to reach 1,000 listeners on the
> web, compared to radio? Remember, you have to each them before you can

If there were 1,000 listeners, and only 1,000 listeners in New York City that I wanted to reach for some type of specialized programming that only was of interest to those 1,000 people, I couldn't afford to do so via radio. But I could via a webserver.

As far as reaching them, that's what search engines are for, and broadcast.com, etc. are for.

We are live from 2pm to 2am and automated the rest of the time.
There are 3 jocks and a 4th on occation.

Kat, Nat, Kurt and Kara

airshifts are usually:
2p - 6p
6p-10p
10p-2a

But it varies if Kara is here and cut into 4 shifts.

Kat is from NY
Nat is from New Zealand
Kurt is from MO
and Kara has lived in Sweden since 1995

For the most part its your average radio station, just inside of a bar
and grill. the 10p to 2a shift is commercial free and heave on dance
music. Sometimes we help in the resterant or club moving tables,
washing dished etc. Since non of us speak Swedish (except Kara) we are
limited in what we can offer the club/resterant.

The studio automation is Dalet.

Can someone tell me if this CA based station is still on the air?

I found an old off-air tape that I made around twenty years ago while on a visit to the US and I should like to contact the station if they possibly have a web site or e-mail.

Many thanks for any help.

phil phil@invest.fsbusiness.co.uk asks ...

>>
Can someone tell me if this CA based station is still on the air?
>>

KRTH lasted just a few years (precise dates are not known by me as I no longer live in L.A.).

The station started as KHJ, and was one of the first stations authorized.

After the failure of "Boss Radio", it was renamed KRTH (K-Earth), and programmed similarly to the oldies format on KRTH-FM, which was, in turn, the former KHJ-FM.

The station was sold to a Spanish language broadcaster and was renamed KKHJ (it was then impossible to return to the three-letter call as these were pulled whenever a call change was authorized).

The station was operated as KKHJ for years until the station decided to "push the envelope" with the FCC and assert that the "KK" part of the call meant, in Spanish, feces, and therefore the four letter call was offensive to its listeners (the licensee was not the first to make this claim).

The FCC ultimately authorized a change back to KHJ, based upon this spurious theory.

So, KRTH (as KHJ) is indeed still on the air, but it is broadcasting in Spanish (as are many of L.A.'s 12 other AM stations).

: Careful, Scott! The "corporate radio people" of this group (of which, I am
: NOT a member) will attack you for this one! You're saying exactly what they
: constantly try to "hush-out"...

I doubt I'll get attacked...the station has been on the air for over a
year without putting up a web page, save for a broadcast.com link. And I
seriously doubt their Corporate people (based in Atlanta..should tell you
who owns them..it isn't Turner) give a damn either. Let's just say a
well-known talk host in Miami used to work for them and still blasts them.

All this station does is take pot shots at their competition (CCR is
"wimpy" "Classic Rock" while Metallica of a few years ago is "Classic")

Like I said..I now listen to their competition. Without mentioning names, I
can say that my digital dial is on either 97.9 or 103.5 (Tampa area). It
sure as hell isn't on <between 102.3 and 102.7>

Hello. I'm writing a free-lance piece on the LPFM issue for a website called
Urban Box Office (http://www.ubo.net/html/index.cfm).
I'm looking for persons or groups who have already applied to the FCC for an
LPFM license or intend to do so, and who also intend to program to young urban
listeners. For example, applicants who plan to program hip-hop music.
Please email me at yahoot@aol.com or call me at 202-383-0007. Thanks!

The KRTH call letters are assigned to an FM station in Los Angeles.
KRTH (AM) is now KHJ, a reversion to the original call sign on the 930
frequency which took place only recently. For a number of years after
dropping the KRTH calls, the station was known as KKHJ, as the F.C.C.
did not allow three-letter call signs to be reclaimed once abandoned.

The station recently succeeded in persuading the government regulators
to make an exception to that policy and restore the original KHJ call
letters, on grounds that this was truly a unique case. Since the
station's programming is now all in Spanish, the first half of the
KKHJ call, when spelled out in a legal station ID, sounded like an
obscene Spanish word for feces.

The tape you have would appear to have come from a time when KRTH
AM/FM were commonly owned and simulcast.

Updated Jul 17, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/TelevisionCity/Station/2700/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!
I'm also accepting news bits to post in my Radio/TV news section.

Radio Station Logos section!

List of HDTV stations, plus a list of stations broadcasting in Spanish for
all of Southern California and Northern Baja.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

david tanny

davidtan @ cts.com

Support good music. Quit buying the bad songs!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!

2958. FA: LPB Carrier Current Transmitter (30W) and Amplifier (20W)

Newsgroup: rec.radio.broadcasting
Date: 2000-07-18 00:00:00 UTC
From: A NU USENET <jetdulles@hotmail.com>
Message-ID: <20000715201855.18902.qmail@hotmail.com>
Source record: 18714

AM Radio Enthusiasts:

Ever want to start a carrier current AM radio station? Thought about LPFM
but want to start broadcasting now? I am selling a 30 watt LPB AM carrier
current transmitter and a companion linear amplifier.

The URLs are :
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=381253603
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=377565008

The AM30 will certainly be sold. I have seen tube-based LPB AM gear go for
extreme prices on eBay yet the tech suport folks at LPB say the replacement
parts for those series are harder to come by. The transmitter I am selling
was built in 1996.

The amplifier when coupled with a low power exciter will also give reliable
service. Panaxis does make a low power exciter and 5-watt kit (see
www.panaxis.com) . (I include a splitter with the amplifier but no
coupler...those appear regular on eBay.)

If your school or institution has a carrier current set up I would
recommnend getting a copy of Panaxis' book on the subject.

Sorry AM stereo fans, this gear is strictly mono but sounds great anyway.

I will deliver in the metro DC area.

2959. FA: LPB AM Carrier Current Equipment : Transmitter Amplifier

Newsgroup: rec.radio.broadcasting
Date: 2000-07-18 00:00:00 UTC
From: A NU USENET <jetdulles@hotmail.com>
Message-ID: <20000718054027.28080.qmail@hotmail.com>
Source record: 18715

AM Radio Enthusiasts :

Check out the following AM broadcast RF items on eBay. All solid state.
Part 15 use only please.

30+ WATT xmtr (530kHz)

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=381253603

20 WATT amplifier

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=377565008

Documentation is included with both items. (Sorry, but the transmitter is
mono, although I am a fan of AM stereo too.)

The useful coupling unit is not included but usually appears on a
regular basis on eBay. (I may have one for sale in a month or
two...stay tuned)

Oh yes, check out the Panaxis book on carrier current radio at
www.panaxis.com . It is a classic tome.

2961. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.broadcasting
Date: 2000-07-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8l11rqgti1@news.hawaii.edu>
Source record: 18717
Cross-posted to: rec.radio.broadcasting,rec.radio.cb,rec.radio.info

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>because I know what you're saying BEFORE you say it!"

That's a little too convoluted to waste much time on.

> There's a REALLY neat little discussion of your profession going on over
>on rec.radio.amatuer.antenna right now... You should look in on it (but, I'm
>sure that you'll have SOME excuse to not chime in)...

Hmm. Sure makes sense that rec.radio.amateur.antenna would discuss
broadcast programming. If they are, it'll be a refreshing change from
the code/no-code arguments they've had for years, even though it would
be seriously off-topic. I used to moderate the Fidonet Amateur Radio
Echo almost 8 years ago and would have welcomed any topic that got
away from code.

I'll take a run over there. My guess is that the same people are still
there bellowing about the same things.

I went over there. It must be a very small "little" discussion because
the only broadcasting thread I saw appeared to be mostly crosspostings
from you. It seems people are yelling at you over there, too.

If this isn't the thread you were talking about give me the subject
line. There are 19,000+ messages since I last looked at it. Not worth
plowing through it looking for ambulance chasers.

Again, as an outsider you're not really in a position to know what
broadcasters are doing to exploit the Internet. Do a little research
on the Internet divisions of all the companies you claim are not
involved in the net. Let's see what you come up with.

Those of us a little closer to the action know better. Bring yourself

Hmm. That would make the T-shirt's value about $32,000. Even though I like what Sirius and XM are doing, it's a little too expensive for my blood.

I know quite a few people at Sirius and XM. Maybe I can get a T-shirt without the car. Where did I put Dave and Joe's numbers?

I also heard some unusual FM activity last Thursday---but I was IN Houston (geez, I live here).

107.5 (The buzz Lake Jackson) was fading badly on the North Side, but 107.3 (Temple I think) and 107.9 (Beaumont) were strong and clear. I also heard A San Antonio FM (KJ 97?) and a Dallas FM.

Beaumont, San Antonio and Austin come in occasionally on my drive to work, but never this strong. I can't recall ever hearing Temple or Dallas FM's in Houston.

Could it be solar activity causing all of this?

http://www.nytimes.com/library/national/science/071600sci-solar-flare.html

Brad, I grew up in Dayton -- send some of the FM signals down here! I used to keep up by listening to WLW-am when I lived in South Texas, but they're blocked quite effectively by KSEV (also 700 kHZ) in Tomball/Houston.

> station licenses' to the general public? What's wrong with internet
radio?

Nothing is wrong with internet radio. It just does not have the reach of broadcasting. It is also not as convenient to use as a broadcast receiver. Sound quality over the POTS internet connections most use is erratic.

LPFM offers diversity, and virtually insures programming that is in-line with local wants and needs.
>

the -----pirates---.

The NAB isn't seriously worried about interference, if by interference you mean the electromagnetic variety. The NAB is really soiling its pants, even after they succeeded in largely gutting the form of LPFM we now have, over the competition. They don't like it that little 100W outfits are going to give their multi-kilowatt members a real run for their money. LPFM stations, to the extent that they will be allowed to actually develop, are going to siphon off listeners from the commercial stations in large numbers. I think it must both gall and mystify the NAB also that LPFMers are going to do that for the love and fun of it. I mean, not only are FM$ stations going to lose advertising dollars, but the money is just going to go away, rather than to another $ station. Reading their monthly, it's clear they can't even understand why anyone would *want* to do this.

So there's no confusion, this bit of commentary is not a personal challenge
to
Chip's views on LPFM or meant to personally attack anyone elses' position.
It's an expression of how I feel--my op-ed contribution--about the broadcast
bands I used to love as a kid.

Regarding present non-licensed FM opportunities, last year I checked the
specs
for Part 15 in the FM band. Unless I miscalculated (always a distinct
possibility), the power one can legally deliver into a 1/2-wave dipole on
that
band is somewhere around -50 dBm, or 50-dB below 1 mW! Now that's serious
QRP--a level that probably makes every "FM band wireless mic" available on
the
market a dangerous tool--illegal by orders of magnitude--and accessible to
any
"radio pirate" with $10 in his pocket!

I do, in my heart, believe there's room for something between that option
and
the mulit-kW bird toasters currently irradiating the FM band.

Moreover, I'm saddened by what passes for programming. Most stations are
now
fully automated--or at least subscribing to an automated programing service
for
content to cut costs (hence the droll repetition, station to station and
region
to region). Meanwhile, in an effort to survive and capture more "share",
the
big fish are now rapidly eating up the licenses of smaller fish within the
same
region, firing staffs, and networking the transmitters as "market expanders"
(its cheaper than re-siting and building 1500-foot towers).

Despite the fact that many interesting and creative things are happening in
the
world of music, you'll hear little of it above 92 MHz on a "formatted"
station.
Of course, if one more moment of emisis-inducing "Classic Rock" proves too
much, you may always cut to Rush, Mike, G. Gordon, or Imus for some ethnic
pruining, get a "fix" of NY sexist trash from Stern, or listen to a clueless
clone of "Judge Judy" flaunt a doctorate in Physiology as her qualification
to
dispense mental health services to a nation. Is this swill justified over

other options solely because it "makes money"?

With great reverence, I thank God for Boston University and the sub-92 MHz WBUR
where you can hear thoughtful talk radio like "The Connection", BBC News, and
even real "blues" on Sunday night with Mae Cramer. Without that, I swear I
would extract my radio from the dash and give myself the supreme satisfaction
of running over it six or seven times before throwing it into the trash (okay,
so I'm a NPR snob and don't "fit" most market demos).

Guess we should all prepare for the day when all non-government spectrum will
be owned entierly by business interests and (like us) be treated and traded as
commodities. As the private citizen's right to freely monitor and access the
airwaves vanishes, in all likelyhood, the right to perform other "risky"
activities such as operate private aircraft, run a local free press, keep
firearms, own private properly, etc will go by the wayside. Yet, we can all
watch the numbers on Wall Street rise--and be glad the folks at RJR are looking
out for our social wellbeing.

Or, we could somehow afford ourselves a social luxury and risk the
self-indulgence of injecting a little vitality into this thing called
Radio--kinda like the way it was when you and I were little hamletts.
Remember? Glued to the headphones and wide awake---after we were supposed to be
asleep??

Well, you have it wrong on several counts.

The clutter you suggest will result is ludicrous. The NAB has successfully lobbied FCC and Congress to require a ridiculous 3-channel {sic} seperation between LPFM stations and existing, mainly commercial, FM broadcast stations. This means that if a station is already on 100.7, the closest a LPFM station can be alotted is either 100.4 or 101.0. This is technically unnecessary and unfairly singles out LPFM operators in favor of commercial ones (no such seperation requirent applies to commercial stations). In many, many crowded markets 2-channel seperation has been used for years without harmful interference. Consumer FM receivers are more selective than ever, and problems are less likely now than ever.

Until internet broadcasting easily reaches people in their cars, on their walkmans, and reaches the poor, the elderly, and others not on the net (many of whom don't want to be), LPFM will be a needed, valuable service. Yes indeed, the FMBC spectrum is valuable, and it belongs to the public. Even where and when IP-broadcasting truly becomes "broadcasting," i.e. universally available, radio will still be convenient, familiar, and simple. If internet broadcasting is such a wonderful thing, let the commercials go on-line.

Since the late 70's especially, when the NAB managed to get the rules rigged to kick everyone off the air under 100W (and to close down many of those >100W non-commercial stations as well), the area from 92-108 MHz has become a wasteland of repetitive, vapid, sterile, rigidly formatted programming. There is hardly a thing worth listening to anymore in most markets.

The effective elimination of the requirement of commercial broadcasters to carry local news, public affairs, and educational programming in the early 80's has further degraded the quality and variety of what is on the air today. With the advice and consent of Congress and the FCC, broadcasters have been allowed to abrogate their responsibility to use the privilege we have granted them in the public interest.

The consolidation of radio station ownership over the last 20 years has been the coup de grace in eliminating diversity, responsiveness, dissent (even of the musical variety), and innovation in radio programming in the US, and much of the rest of the world. I can think of few measures that might be taken to enrich and invigorate broadcast radio. Growing up in New York City in the 70's, and going to college in the Bay Area in the early 80's, I knew how rich, varied, interesting, and occasionally infuriating FM radio could be. LPFM will not restore that era, but it will be a small, significant step in bringing vitality and relevance

back to the FM dial.

More choices is good, right? Or does that only apply when the "choices"
are offered by the programming departments of a few holding companies in
LA and New York?

OK. In that case, the "clutter" you are apprehensive of is part of the
charm and value of the LPFM service, I think. Think of it: as you drive
around a large urban area (the few that will have LPFM allocations,
given the specious 3rd-channel rule), you will know something of the
neighborhood you are in by what you can hear on the radio. Among others,
newcomers to an area will have this additional tool in getting to know
the local flavor. If you are bothered by stations fading in and out, set
your car radio's memories to stations you listen to. For almost
everyone, this is what they do anyway at home. See above for road trip
scenario.

That doesn't wash, or else why isn't the bulk of commercial programming
and its attendant advertising targeted to them?
>

> They have.

Oh, be serious! IP-simulcasting is a promotional gimmick, a "tie-in."
TV/Radio station sites are there for two reasons: to get people to tune
in in the conventional manner, and as a "value-added" service, where
information, such as expanded coverage of a news story, concert dates,
etc., can be found, and people are directed there *after* a program.
When commercial broadcasters begin to abandon their licensed frequencies
in favor of IP, I will be persuaded of what you say.

>
> >Since the late 70's especially, when the NAB managed to get the rules

> I am not aware that the NAB is the FCC.

That's a petulant remark. The NAB lobbied Congress and the FCC
furiously when LPFM was proposed, and has yet to tone down the
rhetoric, almost a year after the FCC Report & Order. A number of
Senators and Congressmen, in particular Billy Tauzin and Michael Oxley
(see his letter to FCC Commish Kennard at
http://www.house.gov/oxley/s9904b.htm), to whose campaigns the NAB
contributes heavily, have worked overtime to gut LPFM. We have been
hearing a lot recently about lobbyists actually *writing* the text of
bills. The NAB is one of the five lobby groups documented to have done
this since 1994, when Common Cause and The League of Women Voters
launched a study of the practice (the others being the NRA, and groups
that represent the HMO, genetic pharmaceutical, and tobacco industries);
NAB doesn't deny it at all, they have publicly boasted of the practice,
as if they were patriots because of it. It is not exactly news that
corporations and trade groups have unparelled access and exercise undue
influence on the legislative process.
>
> the area from 92-108
> >MHz has become a wasteland of repetitive, vapid, sterile, rigidly
> >formatted programming.
>
> ...and if people didn't listen to it, this approach wouldn't work.

A lot of people don't. I listen to less than an hour of commercial radio
a month, FM or AM. And given some *real* alternatives, a lot of people
who don't listen to radio will. The handful of radio markets where a
number of independent stations (commercial *and* non-comm) continue to
thrive, like NYC, the Bay Area, and Boston-Cambridge metro have higher
rates of overall listening, and hours/week listening, than where
redundant taped-and-canned formats reign.
>

> There is hardly a thing worth listening to
> >anymore in most markets.
> >
> ...and yet radio audiences are bigger than ever.

Not hardly! As TV became popular radio audiences declined steadily from about 1955 until the late 80's. The uptick in listenership since then has almost exclusively come from AM talk audiences. Overall listenship is down from its peak in the 40's. When you factor in a growth in US population of 100 million since WWII, the numbers become even more stark.

You mean *re-regulate* a powerful industry in this political climate? One that contributes heavily to Congressional campaigns? It might be desireable, but as likely as President Ralph Nader. Big national organizations do a poor job of being local, particularly in quantity. Except where ownership and management was local, even the best intentioned broadcasters did a poor job of fitting in to the community. The USA Today Principle doesn't work (and not for newspapers either!): one paper for the nation, with maybe 4 column-inches of "local" news per state. You get the same thing on the radio in every city in the US. Same playlist, same personalities, same jingles and promos. The only thing that varies is the ads, and then only according to name.

And, it is *a* concern, not *the* concern.

OK, wrong word maybe. Abdicate. Renege. Evade. The broadcast radio spectrum belongs to the citizens of the US. Those who are granted the temporary privilege of using it have a moral obligation (in truth, they have a Constitutional obligation as well) to be good stewards of this limited national, natural resource. They should be good citizens as well. Whether or not Premier Broadcasting is legally bound to program local news, arts & culture, children's and educational shows, nothing they are presently doing gives them a higher claim to the broadcast bands than someone like Pacifica, which formed for the express purpose of doing radio and doing it differently by letting the listeners actually and directly and right away do the programming. Nothing any

present commercial licensee is doing with their allocations gives any of them any higher claim or special status than my Uncle Jack. Maybe LPFM isn't the best idea. Maybe the best idea is to do BCB allocations by open lottery.

You are correct sir, because the NAB and advertising groups saw to it that the technical requirements that apply to the LPFM service (but not to full-power broadcasters) would preclude them, except in fringe areas.
>

Again, in twenty years you may be correct. But we arent talking about a hobby or a bake sale. Radio, even LPFM, is a mass-media. The internet in general, not to speak of IP-radio particularly, has not reached that status quite yet. When you can walk into a K-Mart and for $25 get a device that will do IP-radio, when cars come standard with the capability, the "mode" will have arrived. Money follows the people, and the money is in RF these days. That is also where you want to be if you mean to serve a neighborhood.

In addition to everything else, LPFM will bring FM radio back to small
towns across the country. In many areas there has been no FM radio, and
little listenable AM radio, since the early 1980s. There just isn't
enough money to be made in those places. LPFM will help to change that.

So far, there are 64 replies and responses, most IN FAVOR of LPFM... Is it
any wonder that Rich only sees "a few" who are blasting ME? There has been a
total of ONE Amatuer operator posting against the Low Power Service...
Repeatedly. The general consensus is that "Corporate Radio, of today,
SUCKS!"
Yep! It's no wonder Rich couldn't see most of THAT thread... It doesn't
support his unsupported (other than by other corporate people) claims.

As I've stated before, "I DO NOT backpedal!" The last time you made this accusation, it was YOU who backpedaled RIGHT OUT OF THE DISCUSSION! And, on average, about 40% to 60% of my services (for each LPFM filing window) HAVE been provided "pro-bono". Now, I remind you, again, the LAST time you started these childishly false accusations, it was one of my clients (who had received the very services that you were claiming to be non-existent) who called your bluff. After which, Mr. Wood refused to comment on that thread any further... After being repeatedly invited to do so.
I DON'T wiggle. I SWIM!

Past posts have talked about their "re-mixes" of mono music into
Stereo. I have a mono recording of a huge youth choir, but would like
to add some sort of stereo effect to add some presence, if nothing
else. I use Cool Edit 2000, but don't see this sort of functionality.
Are there any products (cheap) that can do this, and how good are
they? Or am I wasting my time?

Hi, I have notified the FCC to go after KNAI *88.3 Phoenix, "Radio Campesina." My daughter translated a tape in which they promoted a dance club. I asked some Phoenix people if this is a regular thing, and they said yes. Normally I like to contact the broadcaster first, but they had I believe and got the impression that since the commercials are in Spanish the anglos in the area wouldn't notice.

Paul,

This is perhaps the wrong newsgroup for your post and I would suggest you take it to rec.audio.pro

However, in short, once a recording is "mono" then it is pretty much impossible to make it stereo. In most cases you can "simulate" stereo by taking the mono recording and sending it to two inputs on a mixer and then pan the channels one side to left and the other to right. While it won't make the recording stereo, it will add a bit of "spaciousness"

That three-channel separation requirement is hardly new. New FM applications (at any power level) have been required to demonstrate lack of co-channel and first, second and third adjacent channel interference since, well, certainly longer than I've been around. Why should LPFM stations be magically exempted from this requirement?

> This means that if a station is already on 100.7,
>the closest a LPFM station can be alotted is either 100.4 or 101.0. [...]

I would hope, for your sake, that the gaffe in the above sentence is some sort of typo; otherwise, I'd have to seriously question your technical knowledge of the FM broadcast band as it exists in the US. If your LPFM applications reflect that same level of knowledge, your applicants may be in deep doo-doo. (Can you spot the error?)

>Since the late 70's especially, when the NAB managed to get the rules
>rigged to kick everyone off the air under 100W (and to close down many
>of those >100W non-commercial stations as well), the area from 92-108
>MHz has become a wasteland of repetitive, vapid, sterile, rigidly
>formatted programming. There is hardly a thing worth listening to
>anymore in most markets.

Several FM stations remain on the air at 100 Watts or less. I can't think of any - at least none in my local area - that were kicked off the air. (A few have gone away in the years since, mostly due to lack of interest than anything else.)

As to the second charge, what's to guarantee that the LPFM stations won't simply become part and parcel of that "wasteland"? The FCC hasn't placed any real restrictions on what can and can't be programmed on LPFMs, have they? And do you really want the government making those kinds of decisions for us?

Lest you brand me as some sort of brainwashed NAB-head - which I suspect you're itching to do just now - hear me out. I have never been employed by any commercial broadcaster, nor have I ever worked in any other capacity (as an intern or such) for one. My only radio experience comes from being a volunteer for the past 15+ years (and now a member of the board of trustees) at a non-commercial FM station affiliated with the college I attended. This

station has never been an NAB member. Our programming can best be described as eclectic - I suspect much of it would be along the same lines of what you'd like to see happen at LPFM stations. I personally despise much of what gets programmed on many, if not most, commercial stations in this area, and in much of the rest of the country where I've had a chance to listen in the past few years.

With all that said, though, I certainly don't see how LPFM is going to magically "fix" all that's "wrong" with radio today. Given how the first set of LPFM applications have gone - most of them being taken by the same sort of folks responsible for the proliferation of "religious" translator stations (oh yes, and I'm opposed to them too, and I suspect if you were to actually ask (as opposed to yell at) some broadcasters of their opinion of those translators, you'd find they object to those as well) - it seems self-evident that LPFM won't be any sort of miracle cure. More like a continuation of what we've been seeing with translator abuse in the last ten or twenty years - only more so. I wish I were wrong in that view...

> I'm less
>> than thrilled to see that the major portion of the California LPFM
>> applications are from reliegious groups, many of whom apparently used local
>> churches to file on their behalf

Unfortunately, you are correct. I'm not sure how they plan to get around the local origination issue, but I guess you could skirt it by having your programming "locally originated" from a computer and large hard drive located in the church's office.

I doubt the FCC is going to send out inspectors to check on program content, so unless someone complains, it may as well all come by satellite.

I hope that some of the LPFM's will actually offer interesting programming of local significance. That wish doesn't preclude religion. It is an important part of life in many communities. The problem is in some cases, religion has become a business.

Even so, some of these new stations will offer programming that can't be found anywhere else. Hopefully some will succeed. I wish them well.

No more reason than why commercial and religious translkators (which
operate at 2.5 times the power of an LPFM) should be "magically exempted
from the same rule... As they have been, for years.

> > This means that if a station is already on 100.7,

So, because they *MIGHT* become part of that "wasteland", they have no right to exist? Great, then let's immediately begin proceedings to have ALL licenses revoked because the holders *MIGHT* become a part of the same "wasteland".
As our dear friend Rich has done on so many numerous occasions, let's not convict until AFTER someone has been wronged. You can't revoke a person's freedom because they *MIGHT*, eventually become a thief...

> Lest you brand me as some sort of brainwashed NAB-head - which I suspect
> you're itching to do just now - hear me out

I am itching to do no such thing. Now, if you'd popped up with a "Down with the 'Pirates'!" type post... You bet! I'd be on that in a heartbeat. You see, some of us feel that the simple act of applying for a LICENSE is, in essence, an ATTEMPT at being legal (NOT being ILLEGAL). However, the NAB "goons" (for lack of a better term) tend to believe that the act of applying for one of the new licenses is the same as waving a flag bearing the "Skull and Crossbones". Now, correct me if I'm wrong about this but, wasn't EVERY existing license - at some point - an APPLICATION? By this very analogy, at some point in time, EVERY licensee has operated as a "pirate". Who could be stupid enough to equate an application with "piracy"? You'd be amazed! Especially when corporate says so!

I've NEVER said otherwise. I just thank NAB and the political heavyweights for purchasing the weakest possible service for us. You see, the service has been so weakened through the efforts of these very groups that you are leaning toward in your beliefs.
What's the BEST way to make sure that any LPFMs that do get granted are sure to fail? Make 'em NON-COMMERCIAL and limit them to a pitiful 100 watts and a very low HAAT! That'll do it! No sane business minded person would want to build one of these! Then, when mostly church groups apply (as we all knew they would), let's all point our dirty little fingers and chant, in unison: "I told you so!"

From Rob Andrews...

>>In most cases you can "simulate" stereo by taking the mono
recording and sending it to two inputs on a mixer and then pan the
channels one
side to left and the other to right. While it won't make the recording
stereo,
it will add a bit of "spaciousness"<<

Also, run each channel through an equalizer set flat, then whatever you
do to one channel on the equalizer, do the exact opposite to the other
channel.

While replying to an earlier post of mine, Broadcast Services
<hawkfm@peoplescom.net> wrote:
> No more reason than why commercial and religious translkators (which
>operate at 2.5 times the power of an LPFM) should be "magically exempted
>from the same rule... As they have been, for years.

I'd have to dispute that. Not only do FM translators have to protect
full-service FM stations, but the translators are also classed as a
secondary service, meaning that any full-service station can claim
the translator is causing interference and must be shut down.

I have first-hand experience in this area. Our non-commercial station
rents tower space to another local non-comm for a translator of theirs.
Their first construction permit was on a frequency where there was a
fairly distant co-channel station. That station claimed interference,
and the translator had to be turned off. Another frequency had to be
found, one where a station exists on a *third*-adjacent frequency. That
station had to give its consent before the translator could go on the
air on that frequency.

Now, if you mean to say that a proposed *new* full service station cannot
take the place of an *existing* translator, that may very well be the
case. But translators most certainly do have to protect existing full
service stations.

> So, because they *MIGHT* become part of that "wasteland", they have no
>right to exist? Great, then let's immediately begin proceedings to have ALL
>licenses revoked because the holders *MIGHT* become a part of the same
>"wasteland".

Please don't put words in my mouth. Nowhere in my post did I state that
LPFMs have no right to exist. All I said is that those who claim LPFMs
are the cure for all of radio's ills are, to put it somewhat bluntly,
fooling themselves.

>[I said:]
>> Lest you brand me as some sort of brainwashed NAB-head - which I suspect
>> you're itching to do just now - hear me out
>
>[then you said:]
> I am itching to do no such thing. Now, if you'd popped up with a "Down
>with the 'Pirates'!" type post... You bet! I'd be on that in a heartbeat.
>You see, some of us feel that the simple act of applying for a LICENSE is,
>in essence, an ATTEMPT at being legal (NOT being ILLEGAL). However, the NAB
>"goons" (for lack of a better term) tend to believe that the act of applying
>for one of the new licenses is the same as waving a flag bearing the "Skull

>and Crossbones". Now, correct me if I'm wrong about this but, wasn't EVERY
>existing license - at some point - an APPLICATION? By this very analogy, at
>some point in time, EVERY licensee has operated as a "pirate". Who could be
>stupid enough to equate an application with "piracy"? You'd be amazed!
>Especially when corporate says so!

Again, please don't put words in my mouth.

Every existing license was once a construction permit, and before that,
it was an application. Between the time of application filing and the
construction permit being granted, there should be NO attempt to broadcast
with the facilities being sought. Once a construction permit is granted,
program testing - actual broadcasting - can begin. Then one files for
the actual operating license.

AFAIK, no construction permits have been granted for LPFM just yet.
Until they are, no LPFMers should be on the air - at least not if they
want to obey the same rules as every other full service station did
when they were going through their licensing process.

> What's the BEST way to make sure that any LPFMs that do get granted are
>sure to fail? Make 'em NON-COMMERCIAL and limit them to a pitiful 100 watts
>and a very low HAAT! That'll do it! No sane business minded person would
>want to build one of these! Then, when mostly church groups apply (as we all
>knew they would), let's all point our dirty little fingers and chant, in
>unison: "I told you so!"

There is nothing - and I mean *nothing* - that would prevent any of the
LPFMers from applying for full-power commercial licenses - or even somewhat
less than full power commercial licenses - *IF* their applications were to
obey the same interference restrictions applied to existing stations. That's
where the rub lies - the existing restrictions, for better or worse, are
pretty stringent and, in just about every major city and even most minor
cities, there's no more room available.

Even if you were to go and change the interference guidelines, there are
still only a finite number of frequencies available for AM and FM broadcast
in the US - that is, unless you change every existing receiver out there.
I can guarantee that, even if every single adjacent frequency had a station
on it, somebody - more likely, a bunch of somebodies - that wanted a station
would be left out. Short of changing the 60+ year old technologies that
both AM and FM are based upon, there will be a scarcity of usable frequencies.
The only dispute is over how many such frequencies there actually are in
a given area.

Truly, I wish there were more space available on the dial. I really do.
I have no fear of "competition" for our own little flea-powered (less than
1000 Watts) non-comm FM station. The more the merrier, as far as I'm
concerned. BUT - if some (I'll be polite) "unlicensed" station comes
on, and some of our listeners complain that they can no longer receive
us because of them, would we have a problem with that? You'd better
doggone well believe we would. Now, a licensed LPFM, under the existing

interference guidelines, would be fine by me. Unfortunately, given our position on the dial coupled with that of the nearest (frequency-wise) other station, there just isn't enough room between us. Sorry, but they packed them pretty tight around here...

Panning the mono audio to left and right channels won't do a thing. It's still mono.
Unbalancing the equalization is a trick they used to do to simulate stereo on recordings only available in mono. In addition to this, Capitol Records used to delay one channel by 30 ms.
A 30 ms. delay in one channel with a touch of stereo reverb might help with a choir recording. It won't be mono compatible, but it might work.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Well, if you look at my posts, you will find that I tried to intelligently discuss those issues.

However, I too have been the subject of the harangue.

It may be a difficult thing to manage -- this forum does NOT follow the radio model! You cannot shout down your opponent and hit the 'dump' button and go to commercial.

Some of us have tried exactly what you suggested - but it turns out that we, who are not in the industry, are the ones that fall under attack the most in here. Terry Hammond has also attempted to discuss the LPFM and Internet pros and cons and has also come under attack.

So, we'd love to. Unfortunately, it is not like other forums. I too would like to engage those in the industry in an intelligent dialog without being called names. But, I guess I am learning a lot about the culture of broadcast radio. For most of those reading this forum -- and I would suspect that most of the readers are NOT in the industry -- it's an eye opener, that's for sure!

Maybe I should just watch the insiders "argue" in the fashion that they do.

I second the above! Now, we all can see exactly why I chose to follow the path into engineering rather than to stick with programming. The super egos are just too great and are never mistaken in anything they do. And, the bad part of it is that their research backs them up! The folks are just so good... They're SO GOOD!!! Well, they're just SOOOO GOOOODDD!!!! They're absolutely the BEST at everything! And they know it. And, they tell you about it... They leave you feeling as though, if one of them, at some point, THOUGHT they *MAY* have made a mistake, they'd be so releived to find out that they were wrong about it and were correct after all. (That one will require a bit of thought, I know...)
Some kind hearted individual from this group was nice enough to point out to tripod (the FORMER host of my business web site) that I was "ambulance chasing with 'bait and switch advertising' on usenet newsgroups, specifically rec.radio.broadcasting'". Of course, as expected, tripod terminated my web site (after I had paid for a national advertising campaign in several trade publications which all, now, refer you to a notice that "the site you're looking for is not here..."). The old site had been up and had never received a complaint in more than the two years of it's existence. (Not to worry, though! I've purchased a new domain name and will be hosting on our new, fully redundant server within two or three days. The delay is for the registration processes with internic... And, the domain name is one of those that someone will kick themselves for not claiming already...)
Of course, I'll have to update everyone, here, with that as soon as I can safely say it's registered and "not open to claim-jumpers"...
This group needs a moderator! I will state this again... This group needs a MODERATOR!!! Unfortunately, I fear, we will NEVER find one to match the one we lost...

They do. Station are protected to their 60dBu or 54dBu countour
(depending on class of station). That usually (!) doesn't extend
for 120 miles, however. Like it or not, those are the rules.
Therefore, although an LPFM station may prevent you from receiving
your favorite station from 120 miles away, that is *not* considered
interference.

Gee, can we trade? I bought a "Sound Feeder" at the local stereo store, with
the intent to broadcast some cable radio and Internet radio around my apartment.

I can barely get a clear signal less than 20 feet away (through a couple of
walls,
though)...and that's when I add a few feet of extra wire onto the antenna.

Let's say it has the *potential* to offer diversity. Of course when the
smoke clears and some of these stations are running, it could be all
"Church Chat" or City Hall running meetings that no-one will listen to.
But there might be a few stations that are doing something
a. truly different and
b. that enough people will listen to, making the effort worthwhile.

> What research have LPFM
> people done to back up these dreams?

It depends on who you talk to. But my guess is that many
LPFM-advocates feel that they have the answer to "bad"
radio programming. They might, they might not. But as long
as they don't interfere with other stations (and the rules say
that they are a secondary service to the full power stations,
don't they?) who cares? If they *do* interfere, they can
be shut down.

> It's vaporware until it actually

> >stations in large numbers.

Large numbers? I doubt it. In the larger markets (cities/metro regions), aren't there only a few big guns, and lots and lots of bottom feeders getting a sub-1 share? LPFM there probably will be under the bottom feeders...

These people, both pro- and anti-LPFM, saying that LPFM will sound the death knell for commercial radio, are probably wrong, at least as far as major markets are concerned. Now some place out in the sticks, that had had only satellite radio until the LPFM came to town with locally responsive programming, might shake things up out there....

A lot of that stuff was dry as dust.(some hack from City Hall talking
about sewer lines and such). Who needed it.

There were some exceptions, of course. Some of the rock stations
(the old KMET in LA, for example) had some pretty good talk shows
as part of their "public service". Also, a few of the ethnic stations have
some reasonable public service talk shows. They're underrepresented in
most mainstream media, so such shows do get listened to, and talked
about in their respective communities.

Source record: 18461

Eberhart wrote:

> It appears these rumors are getting more and more steam.

I have no idea whether this will actually happen, but in my opinion it would probably be a smart move. Ron Chapman has been around for so long on DFW radio that he is probably very familiar to the average KLUV listener. OTOH, KVIL has recently attempted to target a slightly younger audience (probably 35 - 44), who may well consider Ron Chapman to be something of a relic.

Over the short run, this would give KLUV an immediate ratings boost, albeit at the expense of a temporary drop on co-owned KVIL. Over the long run, this would allow KVIL the opportunity to build a new morning show that might be more appropriate for their target demo.

3000. Re: Part 15

Newsgroup: rec.radio.broadcasting
Date: 2000-07-19 00:00:00 UTC
From: Broadcast Services <hawkfm@peoplescom.net>
Message-ID: <5Mad5.215$B33.8507@dfw-read.news.verio.net>
Source record: 18551

Part 15 is a name for, basically, "the ability to broadcast, so long as you can not be received, effectively, beyond approximately 50 to 100 feet". In effect, it actually permits so little power that, in my opinion, most of the "Mr. Microphone" type transmitters would actually test as "too powerful" to be considered as "in compliance"...
I once purchased a "Sound Feeder" (wireless FM transmitter which was designed to feed portable CD audio into a car stereo) for $19.95 at a local Wal-Mart. Problem? The darn thing easily covered a city block with a solid stereo signal on the built-in three inch antenna! This, by FAR exceeds the "legal" part 15 limits with a MUCH less stable signal than most of the newer PLL "kits" which are sold to the so-called "pirates" these days.
Now, this is NOT to be construed as a defense of "pirates", but I didn't see any complaints of and/or prosectuction (more like "persecution", as some on this group who learned the basics of transmitters themselves on home made, UNLICENSED equipment, would advocate) against the manufacturer and/or Wal-Mart for the marketing of "illegal" equipment... And, we all know, MANY planes could've fallen from the sky due to THOSE errant milliwatts. Not to mention the devastating effects this "uncontrollable medium" could have had on societal development...

Now, before I even get into this response, keep in mind that YOU responded to a quoted post from another newsgroup (Rich was having trouble finding them, so I helped him out a bit)... now, on with the reply to your comment about LPFM and research:
This is the "folly" of SOME (not all) commercial stations and groups. Granted, the DO "waste" an awful lot of $$$ on research. (I use the term "waste" because, for instance, when I was in the Indianapolis market, the "research audience" was based in New York City... NOT a good indication of the IMMEDIATE potential audience...) Now, were this research based on LOCAL audiences, I'd see a bit more validity in paying so much for it... You may also keep in mind that, most LPFMs will be operating in a rural setting. The best possible "research" for a very small market IS that local listener line! I've always preffered to do my own research and have never failed to provide a top three ranking by doing this. I just choose to pursue "other avenues" as a means of accomplishing my goals.

Or,
> perhaps you think that LPFM licensees, by virtue of some process of
osmosis
> or telepathy, are endowed with a prescient ability to know local tastes
> without study

Interesting phenomina from "a long time ago": We had a thing called a "listener line" or (at the time) a "request line". Now, TRUE, we couldn't always play every possible request because we'd be playing the same few cuts every 20 minutes, BUT we COULD (by taking careful notes and making observations) garner as much information as can be bought from "consultants", today... But, the "consultants", back at that particular time, hadn't figured out a way to charge mega-bucks for, basically, doing this very same thing for the local folks but from some other more distant location... This was in the day when a "PD" was a "PD" and not a "figurehead" who could "blame the consultant" when something went wrong...

> healers. Good intentions, no skills.

I can make a pretty good wager that you'd like to hear the whining (I've saved a good bit of it on my micro-cassette) of the owners of several "groups" that I've worked for during the past two years (since the original LPFM NPRM was introduced). They've made some downright ILLEGAL recommendations to each other as a means of "keeping these low-overhead, stations that can potentially sound just as good as us out of OUR market buy financing applications for people who promise to not compete with our stations"...
Sounds pretty worried to me. If you want, I'll be glad to send you a copy of these AFTER the litigation is completed (sometime during October or, possibly, Novemebr - barring any further "continuances")...
I think you'd probably not be surprised by the low-life type ideas, though. Actually some of them are quite creative. If only they were LEGAL!

I don't know about that -- the college stations in and around the Boston area don't draw big audiences, but they do draw interest. Then again, they're not in it to make money.

There is one thing that I've noticed from both David and Rich. They cannot break out of their "ratings book/audience share" mode. This is the fallacy in their arguments.

Webcasting will not follow the "standard radio industry model" - as it is not standard radio, in the business of chasing radio-style ratings or grabbing a certain audience share.

Neither will LPFM.

In other words, the radio industry might be concerned about competition (while pretending it isn't) - I give you exhibit 'A' above - "minimum ratings book requirement". LPFM operators will not be concerned about "minimum ratings book requirement", no more than today's religious satellators are. That's not how they're going to be operating.

In other words, the radio industry might be concerned about webcasting and LPFM competing with them. These media are not competing with the current radio industry. The current radio industry may be competing with them, but these new services are not competing with the current radio industry.

> audiences, I'd see a bit more validity in paying so much for it...

True - to give you an instance - the infamous Opey (Dopey??)/Anthony duo were run out of Boston -- after running an afternoon show on a Boston rimshot and pulling a sick broadcast hoax (making a bogus announcement that the mayor of Boston had been killed in a traffic accident. April Fool! Yuk yuk yuk!) and then the station reportedly tried to make amends by inviting the mayor to throw pies at the 'talent' -- they were 'fired' and wound up in a station in New York, where they are big time, I guess. Nary a whimper from the audience in the area when they were jettisoned.

Go figure. But I wouldn't trust New York research. These two 'personalities' are the cat's ass in New York, from what we hear, but they're not missed up here.

Same with Mr. Stern - he is not and has never been #1 in Boston. I guess we don't get shocked by 'shock jocks' - we just go ho-hum and press the button on the radio to get another station.

But the New York research would have you think that he is 'it'.

Terry,

Ever see, how when one format is successful, everyone in town tries to copy it? For instance, when Stern came into Boston, some morning hosts (particularly Claprood and Whitley) tried to 'outstern Stern' - a fact not ignored by the local media critics.

So, I do agree with you. Even though those 'in the industry' scoff at LPFM -- they will be listening. Hey, isn't it a good idea to see what the 'competition' is doing, even if the perceived competition isn't competing with you?

Neither.

It is the Part that specifies how much "incidental" radiation a device
may produce. The device may be a receiver [local oscillator radiation],
a computer, etc. As others have stated, the "Mr. Microphone" is claimed
to operate under this Part of the Rules. Part 15 devices are unlicensed.

The low power AM Travelers' Info Service stations are LICENSED. LPFM
stations will be LICENSED.

I'd be willing to lay odds that, if an LPFM came up with a new and
successful format ("call it "Brain Snapping" music as an example, because
there's no such thing...), within DAYS, there'd be full-power imitators
calling it "Brain-POPPING" music and claiming to have had the idea first!
Radio is a lot like an ice-cream shop... Contrary to what the "program
geniuses" would want to believe, most people will AVOID the ice cream shop
which serves only ONE flavor... Unless ALL ice cream shops have been reduced
to a single flavor. Then, the single flavor places would get business by
default. Not because people LIKED it but, simply vecause people have no
other choice. Now, toss in a new chain of ice cream shops which carry more
flavors...

The AM provisions specify a short antenna (3 meter) length and input
power of 100 miliwatts. Prior to the multitude of expanded band
stations coming on the air, I had a part 15 device operating on 1620 KHZ
that could be heard for miles. As soon as the channel loaded up, it was
over. You can do a lot, with just a tiny bit of power, on a clear
channel.

The problem with not including any of the message with a reply is that the
individual to whom yuu're responding will have little clue what you're
discussing and anyone who comes to the thread late will have even less of a
chance of figuring out what is meant.

Actually if I remember correctly, you can pre-select text, then click reply in
Outlook express, and only the preselected text will appear. It's one thing to
cut down much of what is said, but at least some hint of what I'm responding is
necessary for me to give a hint.

THAT'S what I was trying to figure out! Thanks... I've actually been
"cutting and pasting" to include a quote (when I didn't totally forget about
it and included the entire thing).

LPFM doesn't exist yet, so suggesting that it offers diversity is
foolish. It doesn't offer anything, yet. What research have LPFM
people done to back up these dreams? It's vaporware until it actually
gets on the air and listeners respond, saying they find it diverse.

>The NAB isn't seriously worried about interference, if by interference
>you mean the electromagnetic variety. The NAB is really soiling its
>pants, even after they succeeded in largely gutting the form of LPFM we

>actually develop, are going to siphon off listeners from the commercial
>stations in large numbers.

Truly awesome weed! How can a 100 watt potboiler take listeners from
high powered stations if the signal can't reach the vast majority of
the big station's audience?

>I think it must both gall and mystify the NAB
>also that LPFMers are going to do that for the love and fun of it. I
>mean, not only are FM$ stations going to lose advertising dollars, but
>the money is just going to go away, rather than to another $ station.
>Reading their monthly, it's clear they can't even understand why anyone
>would *want* to do this.

They want to do this because it's "fun." Gives them personal
satisfaction. It's all about "me." FM stations won't lose advertising
dollars because LPFM is non-commercial. Advertisers will pay for
results. In this radio economy, that's happening. It's an incredibly
healthy industry that isn't going to be hurt by 12 listeners going
over to the LPFM station to validate their illusions of grandeur.

You have a total lack of a grasp of how the advertising/broadcasting
industry works

LPFM will have no impact on the economics of broadcasting. It will
simply provide interference to existing stations on poorly designed

receivers.

3017. PD Quiz...

Newsgroup: rec.radio.broadcasting
Date: 2000-07-19 00:00:00 UTC
From: Broadcast Services <hawkfm@peoplescom.net>
Message-ID: <Stid5.4840$B33.10032@dfw-read.news.verio.net>
Source record: 18568

Now, before everyone starts screaming that I've just attacked PD's, I found this over a year ago. I don't even remember where I found it, but it seems to apply to some of the logic used during the "LPFM Debates" which are an ongoing thing.

No, this is NOT a "swipe" at any individual or group of individuals. Yes, it is funny and it actually does remind me of people with whom I have worked. No, I will not name those people... Unless they choose to step forward and make the facts known on their own.

For whatever reason, the original version of this quiz was aimed, specifically, at Citadel PD's. I'm not going to bother editing it as, I feel, MOST people will have the ability to look at this in the light-hearted spirit in which the original author had apparently intended. For those others... Oh, well.

Here's the "Citadel PD Quiz:

Are you Citadel Program Director Material? That is the question. You know, being a PD isn't easy. Think about it... a PD has to deal with: The GM, The Sales People, The Listener Complaints, Egotistical Air Talent, Wacked Out Record Guys, Clients, Promoters, and ... well, you know what we mean. PD's have to deal with a weird bunch.

Program Directors are the buffer between the General Manager and all the crap that he doesn't want to bother with. General Managers want to see sales reports, count money, and go to lunch. Program Directors make sure General Managers don't have to make any real decisions that might affect the ratings.

To be a successful Citadel PD you gotta know how to handle certain situations. Each week we'll give you a new scenario to deal with. It'll be a multiple choice question!

OK, Here's are some typical Citadel PD problems:

Quiz 1

It's Monday morning and the receptionist buzzes your office to tell you that there is a very irate mother of a listener in the lobby demanding to see you. It seems your overnite guy has been talking dirty on the request line to her 16 year old daughter. This is not good! She has secretly taped your jock's perverted conversation with her daughter. There's no gettin' outta' this one! This is a big time gotcha!

You have her come into your office, play the tape for you and then you apologize for the conduct of your overnite guy. There'll be hell to pay you

tell her! To make sure that your overnite guy can't deny the phone call, you have her leave the cassette of the phone call. You further assure her that this could be grounds for dismissal. You thank her for coming in and then you must decide what you will do about this situation with your perverted overnite jock.

Do you:

A Fire your perverted overnite jock.

B Ask him why he's not as creative on the air as he was on the phone.

C Ask him for the 16 year old's phone number.

D Forget the whole thing and play the tape of the conversation at the next station party for entertainment.

If you said B C or D you have the potential to be a Citadel Program Director.

Quiz 2

You're the new PD at a radio station that has been "having trouble" in the ratings. To tell the truth the station is dead last and sucks even more than your last station did. You have been hired to turn the station around and restore it to its' former glory of being 10th in the market instead of 23rd. The station's owner is committed to being a "winner", so you've got some resources at hand. You have several options:

Do you:

A Fire the entire air-staff, steal someones imaging statements, act really uptight all of the time, start calling yourself catchy names like "Doctor" or "Bubba", develop an ego the size of Alaska and start over.

B Steal the competition's morning guy.

C Get the air-staff squared away. Make sure the formatics are being executed properly. Adjust the music, throw some major bucks at the market with a hot new promotion you've been dying to run, get some new jingles, and pretty much re-invent the station. Transform it into the station you've always wanted to program. Be aggresive with your programming and promotions. Dominate all major concerts with your station's presence. High profile is the word for the next year!

D Play it safe, steal someones imaging statements, act really uptight all of the time, start calling yourself catchy names like "Doctor" or "Bubba", develop an ego the size of Alaska, hire a consultant, make only the changes he suggests and then blame the consultant when it doesn't work. Swear you didn't agree with his decisions from the beginning.

If you said A or D you have the potential to be a Citadel Program Director. D was the most correct answer.

Quiz 3

Well, the book just came in and boy does your morning show suck! How's that for starting your day? Here's the problem. The present morning team has been at the station for six years. Six years of recycling the same tired old cow plop on the air. No wonder listeners are scarce. The last time they did anything really funny was in the john when they had that farting contest. You wanted to put that on the air but management said no. Anyway, it's time for a change. Upper management might say: "We've decided to go in a different direction." Meaning: "You guys suck and you're outta' here." But you, as the Program Director, must examine the bigger picture. We're talking your job security here too.

Do you:

A Fire the morning team and begin a nationwide talent search.

B Begin a nationwide talent search..THEN..fire the morning team.

C Give the PM Drive guy that morning shot he's always wanted. He's gotten a lot better, really! He's good on the phones, loves doing personal appearances, knows when to shut up, unlike the morning guys. He does voices, gets along with the sales reps and his numbers have, for the last six years, been the highest rated daypart on the station. And.... the station won't have to pay moving expenses.

D Get new jingles.

If you said D you have the potential to be a Citadel Program Director.

Quiz 4

It's 12:42am and your phone rings, shattering a very exciting bout of love making. The call is already off to a bad start and you haven't even said hello yet. It's your 7 to midnite guy and he's pissed because the midnite to six girl hasn't shown up yet. He tried calling her apartment, not home. Beeped her on her beeper, no response. Woke up the afternoon guy before calling you and was told to deal with it.

Do you:

A Tell him to play the hits til the morning show comes in.. cause it will be good exposure for him.

B Tell him to just hang on until you get there and take over.

C Tell him he's got the wrong number and hangup.

D Tell the midnite to six girl to get her clothes on and get to the station.

If you said A C or D you have the potential to be a Citadel Program Director.

Quiz 5

The Morning Guy you hired a year ago (based on an incredible air-check) SUCKS.. no, he doesn't just SUCK..... he really S U C K S..... and he's got

(not) the numbers to prove it. So what are you gonna do about it?

Do you:

A Tell him he's fired. Kick his ass out and and begin a nation-wide talent search for a real morning guy. (That nation-wide talent search always instills confidence in the air-staff)

B Try to be a nice guy and work with him and get him to perform on the level of the air-check that got him the gig..... or else!

C Have him over for dinner and suggest he might want to dust off the old resume because you're moving the afternoon guy to mornings.

D Give him a raise and a 3 year no-cut contract because in your heart you know Arbitron and the rest of the air-staff are wrong.

If you said D (as in duh) you have the potential to be a Citadel Program Director.

Quiz 6

Two months after your annual budget meetings, your Promotions Director comes up to you and says "Hey! How much budget do we have left? Enough to buy a gross of T-shirts for a big upcoming concert?"

You wonder about this for a sec... the GM and GSM never DID give you a final figure after the budget meetings. Those meetings mainly consisted of stuff you'd LIKE to do to promote the station, but no final figures were talked about.

You approach the GSM and GM and ask how much of your marketing budget is left. "Why? What for?" is the response. You explain. "No, don't order any more T-shirts." is the answer. You ask HOW MUCH money is left in the budget but it's like you're speaking Mandarin Chinese.

In a last ditch effort, you ask if you could take a look at the client list for each of the sales staff. Maybe there's a client who would like to tie in and have his logo printed on the shirts along with the station.

"Why do you need a client list?" asks the GSM. You respond. "no. no clients would want to be in on something like that." he says. You ask if you could allocate the budget from somewhere else.

"No, we have no more budget."

"Could we back the budget out of a large buy?"

"No."

"Are there any clients who could help provide us with promotional items?"

"No, we are not going to ask our clients for anything for the promotions / programming staff. If anything, we're just going to ask for more money."

One week later, the GSM come up to you and asks why the competitor in the market is kicking your ass promotionally.

Do you:

a.. A Calmly and rationally explain that in order to make money, you have to spend money and that the lack of exposure due to lack of promotional materials is hurting the station rather than just saving money.

B Give him exceptionally vague answers and let him figure out the solution himself.

C Explode, telling him that he must be the most limber person you have ever met because you'd have to be awfully flexible to have your head so thoroughly buried in his ass as he does, tell him to think clearly and somehow, somewhere come up with the budget to be promotionally active.

D Say screw 'em both and approach the clients yourself, pissing off two or three of the clients who just spent $12,000.00 in advertising last month by not offering to make them a part of the promotion for free in the first place.

If you said C or D you have the potential to be a Citadel Program Director.

Keep checkin' in for the next Citadel Program Director's Quiz. Remember, jocks become Citadel PD's because.. well, PD also stands for "Pretty Desperate".

Quiz 7

The FCC has just introduced a proposal to create a new class of radio station and it has been brought to your attention that one of your employees might be considering filing an application for one of these VERY LEGAL operations.

Do you:

A Approach the GM with whatever trash you can dig up (true or not) concerning the employee. After all, you are the person who'll have to compete with the newly legalized service and still maintain a maximum level of BLANDNESS. And HURRY! Any delay at all could set you up to have new competition thereby forcing you to (YUCK!) BE CREATIVE!

B Blame the engineer because the other employees (receptionist and handyman) say the son of a bitch is the only person in the building who could possibly understand enough about the industry to make a successful go of it.

C Fire the employee immediately! Make every possible attempt to claim the equipment for the new class of operation could have potentially been (maybe even in a past life) stolen from you. (This works especially well in the case of an engineer who MUST perform a minimum of 39 hours of service each day. After all, aside from taking some of the repairs home, there's NO WAY he'll be ever able to complete all that is expected of him. In fact, if you

stage a visit to the poor dudes' house right after turning in an inordinately high number of repair requests, you'll probably be able to come back bragging about how YOUR equipment won't be used in any ILLEGAL OPERATION, now! But, BEWARE: If you LIE about YOUR equipment being used in the operation, YOU AND EVERYONE ELSE MAY FIND OUT THAT YOUR EQUIPMENT WASN'T THERE FOR THAT PURPOSE BY TURNING ON YOUR RADIO AND HEARING THE NEW STATION ON THE AIR, LICENSED OR NOT!)

D Make an attempt at forming some type of an association with the prospective applicant. Who knows, some of your lower paying clients could be moved to the lower powered station and your sales department could handle the account collecting a commision for your stations as well as the sales rep.

If you said A,B, and C with a HEAVY emphasis on C you have the potential to be a Citadel Program Director.

Keep checkin' in for the next Citadel Program Director's Quiz. Remember, jocks become Citadel PD's because.. well, PD also stands for "Pretty Desperate".

Before I even begin, Rich, that was NOT my post to which you responded. It was one of the posts which you couldn't find on another grup, yesterday. (You remember... The group in which you said you looked and could only find people who were "bashing ME" because of my support for the low power service...)

Now, to the issues at hand:

> LPFM doesn't exist yet, so suggesting that it offers diversity is
> foolish. It doesn't offer anything, yet. What research have LPFM
> people done to back up these dreams? It's vaporware until it actually
> gets on the air and listeners respond, saying they find it diverse.
>

I feel fairly secure in saying that MOST of us realize the gentlemen meant to say "LPFM *WILL* offer diversity..." And, it doesn't take "research" to figure this out. Only common sense. Any claim otherwise is not very well thoughtout. The sounds of bumblebees buzzing in the hive would be "diversity" (albeit not a particularly GOOD choice of programming).

> >The NAB isn't seriously worried about interference, if by interference
> >you mean the electromagnetic variety. The NAB is really soiling its
> >pants, even after they succeeded in largely gutting the form of LPFM we
> >now have, over the competition. They don't like it that little 100W
> >outfits are going to give their multi-kilowatt members a real run for
> >their money.
>
> This man is smoking some awesome weed.
>

Back up and look at how many 50 and 100 Kw. stations run at breakneck spped to the nearest FCC field office at the mere mention of a "pirate" in town. Even when it's clear that the "pirate" is on a much removed frequency and couldn't possibly cause interference to the commercial station! (Oh, I know... The commercial station is just making sure that the "pirate" doesn't jam reception of any competition, too... Ain't brotherly love wonderful?)

> >LPFM stations, to the extent that they will be allowed to
> >actually develop, are going to siphon off listeners from the commercial
> >stations in large numbers.
>
> Truly awesome weed! How can a 100 watt potboiler take listeners from
> high powered stations if the signal can't reach the vast majority of
> the big station's audience?
>

Give me 100Kw. in a rural area and give me 100 watts in the same rural area. I'll show you how to make vastly more money with the 100 watts any day of the week! Not be billing more, but by saving more! I'll also show you how to get better AQH and cume IN CITY OF LICENSE with the 100 watts... Any day of the week! Guaranteed.

> They want to do this because it's "fun." Gives them personal
> satisfaction. It's all about "me." FM stations won't lose advertising
> dollars because LPFM is non-commercial. Advertisers will pay for
> results. In this radio economy, that's happening. It's an incredibly
> healthy industry that isn't going to be hurt by 12 listeners going
> over to the LPFM station to validate their illusions of grandeur.
>

Is that why YOU wanted to get into this business? Most people who wish to own an LPFM are driven by the same "needs" that you are. As I've stated elsewhere, "What makes it right for YOU but, so wrong for others?"

> You have a total lack of a grasp of how the advertising/broadcasting
> industry works
>

Actually, he DOES have a total lack of grasp of how the (major market) broadcasting industry works. But, his ideas would kick some serious butt in a rural setting.

> LPFM will have no impact on the economics of broadcasting. It will
> simply provide interference to existing stations on poorly designed
> receivers.

but, it will be LEGAL interference, the same as the interference created by the small 50 Kw. stations that you operate. (Yes, I said "small" 50 Kw. as I've decided to begin applying the same logic used, here. I've both programmed and engineered - often, holding both positions at once - 100 Kw. FM stations. I guess that makes me "twice as successful" as those who've only programmed Class B's?)
I don't feel that way in real life, but I HAVE noticed that there's a certain air of "I've BEEN there and you have NOT!" going on, here. I ditched programming and stuck with engineering due to the enormous egos involved in programming. I can't help but feel that all people are created equally (Haven't I heard that somewhere before?) and NO ONE is a superior being.

I'm really glad you're here. You provide so much fodder for comment
that it could keep a good commedian employed for a lifetime.

I've never been more impressed than by reading an Amateur radio
operator's diatribe in a newsgroup devoted to the esoteric topic of
alt.radio.amateur.antenna. LPFM programming should be off topic in
such a newsgroup, but I suppose, it'll creep in with "keep it up with
Vigorex" spams that overrun the groups.

Please let other readers understand that the Amateur Radio newsgroups
have a long festering argument about who's a real man and who's a
no-code operator. I suspect the discussion of LPFM is a desperate
attempt to change the subject, since no-code operators are the fastest
growing in the slow growing Amateur Radio hobby.

You're terribly sensitive, but it gives me top billing when my name
appears in the subject lines of many messages. I'll be famous very
soon. Maybe I'll be the poster boy for poor ol professional
broadcasters when LPFM takes over the communication's universe with
"all Jimmy Swaggart, All the Time."

>

See if this looks familiar... And, yes, I quoted it. (Can anyone tell me
how to "paste as a quote" with poutlook express?)

That is one excellent reason for creating a legal, regulated low-power
class of license for community broadcasting. As I and others have
said over the years, when an activity is illegal, who will be
attracted to it? Certainly not school-teachers, legitimate broadcast
interests or legitimate community groups. You will attract those who
don't mind breaking the law. Usually those with a personal agenda.
But many micro-broadcasters WANT to be licensed. This is a growing
segment of the 'movement'. The absolute pirates who would not be
licensed at any cost, are shrinking into a minority. Most, these
days, would love a license for 10 or 20 watts... And the day for such
a service is not too far away, either.

Remove the blanket illegality, create a legal zone for the activity,
and you will see more legitimate interests attracted to it.
It still amazes me how adamantly opposed the NAB and some broadcasters
are to ANY notion of low=powered broadcasting. Seems that some
people will go to any lengths to stop pirate activity... Any length,
that is, other than making it legal. Yet the new chairman
of the FCC is very open minded about the topic and has encouraged
petitions and comments to bring about a reasonable LPFM service.
I do not see the NAB declaring war on full-powered broadcasters who
leave their daytime power on at night, who fail to correctly identify
or who over-modulate on a regular basis.

Instead of spending all this energy trying to stamp out low-power
community broadcasting, why not tale a realistic look at ways to
create and regulate such a service so that there is a legal avenue for
what is now an illegal, yet flourishing, activity. The need is there,
like it or not. The only question left is whether it will be filled
by an illegal, unregulatedd pirate or by a legal, regulated community
broadcaster.

In private conversations, many of the broadcasters who oppose LPFM publicly, admit that they would like to see such a service legalized. Many admit with glee their own days of 'tweaking' a phono oscilator or other gear and going on the air illegally. Some even got the radio 'bug' that way. Now that Chairman Kennard of the FCC has gone on record as supporting an LPFM rulemaking, maybe some of the closet LPFM supporters can come out and admit that it just might be a good idea.

If the group can't take a variety of opinions on a variety of topics
it should cease to exist. If you really have a problem with the topic,
learn how to use the twit filter in your newsreader. Just put the
offending poster on a list and they'll never be seen again. Of course
you'll never see other postings that might interest you. In this age
of technology we can wipe those who annoy us away. It makes some
threads make less sense, but the purity of not hearing an annoying
topics might be worth it.

The best way to counter threads you don't like is to create some you
do. Stop lurking and try and drown out the offensive ones. That way,
it becomes a much more interesting group and no one gets told to shut
up.

And, that offer STILL stands! I'm preparing five FREE applications this
week... Is there something wrong with that?

> I asked why you rescinded the offer of free services. You denied
> making the original offer.

When? Could you, please, re-print it for us to see?

You call it whatever you like.
> I thought backpedalling was a more kind description than bait and
> switch.
>

Show me the denial of the offer. My offer of free services to those who
cannot afford to pay. But, as God is my witness, I can find nothing wrong,
either morally or legally, with accepting payment from those who can and
will offer to pay a REASONABLE (on average, slightly less than 50% of what
others are charging as a "pay UP FRONT or no service" fee).

> I have no problem with companies charging for services. I have a
> problem with deception.

Where's the deception, Rich? The only deception I'm finding, here, is your
repeatedly posting this false accusation of "backpedaling" and "bait and
switch". however, I'm beginning to think that it's more a case of
"confusion" than "deception". At least, i would HOPE that you'd be more
professional than THAT!

Don't forget commercial broadcasters who will be watching to make sure
LPFM becomes all it can be in service to its community. Service is the
key. We'll be looking for community service they promised, not the
cookie cutter hip hop/dance format every community seems to need.

We're also concerned that every community have a religious station
that serves their religion. In New York, with more than 6,000 official
places of worship, that might be tough.

If the FCC does to LPFM what they do to commercial broadcasters, LPFM
will have to survey the community and find out how many people follow
which religions and program so it reflects the religious makeup of the
community. That'll make very little room for that desperately needed
dance mix.

I'll tell him you sent your regards. He's a good guy and will probably
smuggle a T-shirt to you and me. I would love to provide programming
for him, but can't figure out how not to circumvent my terrestrial
affiliates who wouldn't appreciate it.

>Oh, and the factory installed radio-bearing cars are not yet on the market.
>But us hayseed radio types already knew that.

Oops! I want to know when they're released. I'm an early adopter and
will probably have a receiver as soon as they're ready. I have great
respect for the people involved and hope everything goes well for all
the launches. Both companies have told me what their plans are and I
don't see them as a threat. I see them as additional options.
Remember, there are huge chunks of the US population that don't spend
much time with media. If these services bring those people into the
mix, it'll be good for all of us.

Then, perhaps the time has come for the public to begin pressuring the FCC
to require a certain amount of "community service" from full power stations
as well (beyond a one hour "public affairs" program aired at 4AM on Sunday
mornings... a great place to "hide" such material, by the way). That WAS the
justification for their licensing, as well, was it not?

I have made enemies in the LPFM camp by saying this on several occasions
before but, I agree with you on this particular issue. I think LPFM SHOULD
be made to live up to some very strict standards. I also totally disagree
with the watered-down version of EAS that the LPFM rules call for. I think
EAS participation should be total and complete as should all community
service requirements (which, by the way, also apply to all full power
stations... who, in turn manage to somehow "get around them" in a most
eloquent fashion with no repercussions to speak of)..

I really appreciate your help. It was selfless and kind. However, I
told you there were more than 19,000 messages in
rec.radio.amateur.antenna and in scanning the subject lines it didn't
seem that vast majority of Amateur radio operators gave a rat's
posterior about the topic.

I was shocked to find them actually discussing antennas. I haven't
fired up my HF rig in a few years. Maybe I'll have some incentive to
get back into it. My cell phone took the thrill out of noisy long
distance communication.

Of course. The 5,000 applicants who were turned down will be very upset to see the frequency dark, after all they could be putting it to good use. The Left Foot Only dance mix group will be incensed that they're being discriminated against.

I really wish I had taken those law courses my mother suggested. I see another profit center emerging.

No matter what the delivery system, if no one listens the effort
produces no fruit. Don't get hung up on ratings. You won't get any. Do
the research and find out how many people are likely to listen to
whatever programming you offer. If 3 people listen it's more cost
effective to invite them over to you place for drinks and play some
tunes while you drink.

>LPFM operators will not be concerned about "minimum ratings
>book requirement", no more than today's religious satellators are. That's not
>how they're going to be operating.

They had better find something to quantify the audience. Religious
groups are on a mission. They won't know the results until after
Armageddon. Billy Bob and his Left Foot Only dance mix is being done
to please Billy Bob. If Billy Bob gets a hot date on Friday with a
guarantee of scoring, I expect some technical difficulty on Friday
night.

Everything competes for everything. Anything that diverts a listener
from listening to my station is a competitor.

Now, before you get defensive, Rich, take thai as it's intended: As a
JOKE!

Have you began to seriously consider having men and women "fixed"? After
all, by this analogy, SEX is competition. (And, in fact, it IS competition!
Of a very generalized nature. Ok, enough screwing around, here...)

I doubt very seriously that many (if any) potential LPFM broadcasters will care if they make the ratings books. As long as they have a few loyal listeners and the funding to pay the light bill, they will be satsfied.

>Go figure. But I wouldn't trust New York research. These two
>'personalities' are the cat's ass in New York, from what we hear, but they're
>not missed up here.

New York Arbitron research is done exactly the way any other city's
research is done. It counts the number of people who fill out diaries
that mention the stations. Boston's is done the same way. How, as a
listener, would you know what kind of response a station is getting?
Do you call their research department and ask?

You're confusing newspaper publicity with actual ratings. The only
thing that makes a personality "the cat's ass" is ratings. I see New
York newspapers (and others in other cities) do profiles on lots of
radio personalities. It's usually based on an interest the reporter
has in that personality, not necessarily based on how many listeners
the ratings may show.

>Same with Mr. Stern - he is not and has never been #1 in Boston. I guess we
>don't get shocked by 'shock jocks' - we just go ho-hum and press the button on
>the radio to get another station.

Who is "we?" Do you represent a group that determines this? Have you
done personal research among young males to determine that they "just
go ho-hum?

>But the New York research would have you think that he is 'it'.

No. New York research would have you think he is "it" in New York.
Since his numbers in New York are very high, he qualifies as "the
cat's ass." Opey & Anthony don't have those numbers, so they haven't
been elevated to "cat's ass" status.

The industry runs by different standards than groupies do. Groupies
run on rumors. We run on results.

I have no problem with you charging. I have a problem with charging
after making a free offer. I suspect the original offer is in the
archives, somewhere.

I though a free offer was stupid. If an applicant afford the technical
analysis required to try and avoid interference, then he surely can't
afford to operate a station.

Fair enough. However "the public" has to accept the responsibility to
listen to that stuff. If you make a station broadcast it, you should
be willing to get together in a theatre, maybe, and listen to it as a
group. Our problem has been that no one listened to the stuff even
when it was aired in good time slots.

If LPFM stations aren't required to adhere to EAS rules, their
listeners will be in danger when that big sunami comes. I've always
wondered why it was so dangerous for a civilian car to park in front
of a fire hydrant because it obstructed hose connections. If civilians
and police drive the same cars, why isn't it dangerous when a police
car parks there when the donut shop is a block away?

The same rules of physics apply. The danger is going to endanger
everyone, so any broadcaster should be held accountable, LPFM
included. Unless, of course, God tells the religious broadcaster
directly and they can pass the info on.

>Of a very generalized nature. Ok, enough screwing around, here...)

Sex is a major competitor! Fortunately, in this country it seems to
last only a few minutes (or so women complain in Cosmo), so we can
still get some of the quarter hour sampling.

Having men and women fixed would be tampering with the sample and
would invalidate the research. Not to mention putting the fixing staff
in very serious danger.

Our job is to make our programming so compelling (like the Superbowl)
that men will lose all interest. Actually, radio listening by wives
during the Superbowl probably spikes.Good news. Bad news.

3037. Houston Radio Frequency Swap

Newsgroup: rec.radio.broadcasting
Date: 2000-07-19 00:00:00 UTC
From: Paul Van House <pvanhouse@ev1.net>
Message-ID: <3975F239.6215ED19@ev1.net>
Source record: 18588

KLDE (formerly 94.5fm) and KTBZ (formerly 107.5fm) have swapped frequencies. The swap has something to do with the sale of KLDE by AMFM to Cox. KTBZ is owned by Clear Channel.
I heard a promo on KLDE this morning pushing 48-hours of uninterrupted oldies. There were still jock cut-ins, promos and traffic reports, but I didn't hear any commercials. The Buzz is apparently programming as usual, although they aired a live "listener appreciation" concert last night.
In addition, KLDE is now simulcasting on KKTL (97.1 Cleveland Tx - was co-owned with KTBZ) but they don't seem to be promoting this on the air. KTBZ was also using this station as a simulcast -- probably to get coverage on Houston's north side since the 107.5 Transmitter is near Lake Jackson, well South of Houston.
Here's a link to the KLDE site with comments from the GM on the swap: http://www.klde.com/main/dialpos.htm
There's been little or no media coverage of this frequency swap, so perhaps someone "in the know" can step in and explain what's going on.

Here it is.. EXACTLY as it was first posted on April 3, 2000 at 9:19PM (I
archive EVERYTHING):

I am a consulting engineer and would like to offer my
services in locating frequencies and in preparing applications for the new
LPFM stations. I will include my usual rates, but the point of this is to
let you (and everyone else) know that I WILL NOT REFUSE A CLIENT DUE TO A
LACK OF ABILITY TO PAY! (This is my way of helping the LPFM movement along.
Besides, I feel that the people I help out will, eventually, return the
favor in one way or another.)

Now, here are the usual rates:

LPFM Frequency Searches: $189.00
Full Power FM Frequency Searches: $249.00
LPFM Application Preparation: $949.00
Full Power FM Application Preparation: $1,749.00
Upgrade Study: $895.00
Upgrade Preparation: $1,749.00
Full Color Coverage Maps (single station to any contour): $79.00
Full Color Coverage Maps (groups) $79.00 + $25.00 per station, beyond first
station.

Also, for every paying client that is refered (with proof of the referal),
I am willing to reduce the fee by 25% for the party making the referals!
This could, actually, get you a free frequency search and application...

> I though a free offer was stupid. If an applicant afford the technical
> analysis required to try and avoid interference, then he surely can't
> afford to operate a station.

Maybe. Maybe not. I'm sure that you may feel justified in condemning a person's due to a shortage of cash. I can not do that. Some of the most talented people i've ever known couldn't quite seem to get started due to a lack of cash. Some of the least talented people I've ever known not only got started but ended up in some awfully high places due to a surplus of cash (and being in the "right place at the right time")...

Gentlemen;

For the last several weeks several of you have been firing back and forth across this electronic forum about the relative merits of present day radio vs. LPFM vs. Internet radio vs. satellite radio. At times this thread has been interesting, but more recently it has turned into a name calling, finger pointing diatribe that is neither informative nor terribly interesting to read. None of us can know with any great certainty what the future will bring this industry, or the remainder of civilization for that matter. All that has been certain in the century that we are soon to depart are death, taxes and change.

Before you gentlemen manage to chase everyone else off of this forum, could you please either call a truce to this or continue to abuse each other on your own time (and your own e-mail).

There is no really satisfactory method of synthesizing stereo but
ther are some fairly decent devices on the market.
The problem with simple filtering as above is that the two resulting
channels will no longer combine to mono without sounding very strange.
Adding a delay in one channel results in a comb filter when the two
are recombined.
The recombined mono signal is important in stereo broadcasting,
where the bulk of listeners are still using mono receivers.
I think the poster above is refering to the Duo-Phonic system
Capitol Records used to use. It was pretty awful.

>ignored by the local media critics.

Was that based on the critics actually listening to the competition or hearing Stern say that? (Stern's oldest bit seems to be that everybody's stealing from him.)

And Marjorie Claprood? The seemingly-nice, attractive blonde former politician (unless, of course, you're a conservative) who had that short-lived show on Lifetime? OutSterning Stern? (Unless it was her wacky sidekick.)

As I said in my last post, Rich, don't think about being a lawyer. Stick to radio. Such an argument against LPFM only reinforces the opponent's view.

> Everything competes for everything. Anything that diverts a listener
> from listening to my station is a competitor.

So, you ARE afraid of competition after all?

The ratings are published in the papers here from time to time. Stern is not doing as well as had been hoped in Boston. You can look it up.

> You're confusing newspaper publicity with actual ratings. The only
> thing that makes a personality "the cat's ass" is ratings.

No, Rich, I'm confusing ratings with ratings.

The ratings, Rich. Staid old WBZ with its mostly-news format clobbers Stern. You could look it up.

> No. New York research would have you think he is "it" in New York.
> Since his numbers in New York are very high, he qualifies as "the

>

No IMHO they are at cat's ass status. I don't give a cat's ass about Dopey and Anthony. And they WERE run out of Boston, and that is not rumor.

> The industry runs by different standards than groupies do. Groupies
> run on rumors. We run on results.

I'm not a groupie, Rich. Can you keep your conversation civil?

Again, don't go into law.

> him.)

The critics. There were warnings that when Stern came into town, that the number one thing NOT to do is try to imitate him, or get down to his level. People will initially listen to him, but the market will (and has) determined if he will just survive, stick, or take it over. He has been moderately successful, but not dominant. However, while I don't know which companies own what here anymore, I think CBS owns WBCN now (these situations change from day to day) and overall, more people are listening to CBS stations, so it has worked out, even if Stern is not as popular here as he is in New York. Different tastes.

> And Marjorie Claprood? The seemingly-nice, attractive blonde former politician
> (unless, of course, you're a conservative) who had that short-lived show on
> Lifetime? OutSterning Stern? (Unless it was her wacky sidekick.)

She was a liberal Democrat in the state legislature here and a losing candidate for Lt. Governor before going into radio. It worked for awhile -- and no doubt Stern had an effect on their audience. But instead of sticking to what had worked for them and taking the hit, they went the low route -- inviting callers to tell jokes that weren't normally heard in such a forum, etc. And of course, her sidekick occasionally shouted callers off of the air. The mix used to be good but like whipped cream and baloney - the new mix didn't make it.

BTW, Richie, you're a VERY popular person on this mailing....

Rich Wood wrote:

"If the group can't take a variety of opinions on a variety of topics it should cease to exist."
---You're right, Rich. This group should allow, at all times, a variety of opinions on a variety of topics, which is what the last month's newsletters have afforded to all of us.

"If you really have a problem with the topic, learn how to use the twit filter in your newsreader. Just put the
offending poster on a list and they'll never be seen again."
---I don't use a newsreader for this newsletter, Rich. It's sent to my regular email address, which filters it to my main mailbox. I guess I'm sort of stupid on this subject, because I wouldn't know how to use the newsreader in my email program (which is Outlook Express). Oh, and BTW, I didn't say I was offended. I was asking for a little less personal attacks and a little more substance. I'm sorry that wasn't what came across.

"Of course you'll never see other postings that might interest you. In this age of technology we can wipe those who annoy us away. It makes some threads make less sense, but the purity of not hearing an annoying topics might be worth it."
---And purity is what I am aiming for, Rich, being a Catholic and all.......But, seriously, that's not what I'm searching for. Also, is there anywhere you can point me to where I can get information on how to use newsreaders in email clients? The help page in Outlook Express really doesn't make much sense to me.

"The best way to counter threads you don't like is to create some you do."
---Good point, Rich. That's why I've started this new thread called "Help from Rich." With it, I can call upon your expertise and knowledge. I have to admit I probably haven't the experience you do, but would like the opportunity to learn. Just call me "Grasshopper."

"Stop lurking and try and drown out the offensive ones."
---Hmmmmmmm. Lurking.........That's almost sounds as if I'm actually READING all of them. Well, I have to admit, I was for awhile, but now I just leap past them quickly, just glancing over them just in case there's some information I might be able to use in my profession.

"That way, it becomes a much more interesting group and no one gets told to shut up."
---If what you got from my post was asking you and others to shut up, then I again apologize. That is not what I intended. I meant for it to beg for

common sense to prevail. I hope mine has.

I anxiusly await the LPFM that spends hundreds of thousands of dollars a year to find out what local tastes are. Like "real" radio stations. Or, perhaps you think that LPFM licensees, by virtue of some process of osmosis or telepathy, are endowed with a prescient ability to know local tastes without study. Better they open a fortune telling salon. They will actually make money from that.

Wanna make a wager? There will not be enough of the stations with compelling enough programming to even get a minimum ratings book requirement in any major market. And for the same reason I don't patronize faith healers. Good intentions, no skills.

Argentina is the world cha;mpion in permissiveness in regards to community
(ne Pirate) broadcasting. Buenos Aires alone has over 100 pirate stations at
any time. Some runh as much as 10 kw at 200 meters HAAT. Surprise: none of
them even registers in the local radio ratings, despite the fact that the
ratings company, a European firm used to offshore pirates and such, will
list them if they get 0.1% of listening.

Big power. Crummy amateur programming. Good local FMs in the market. No
audience for the "community stations."

Does not work there, did not work in Italy, will not work in the US.

> Since the late 70's especially, when the NAB managed to get the rules

Some of us realloy want to hear music on a music station and news on a news
station. I don't pick my Church for its dances and I don't pick my gas
station for the religion of the owner. Irrelevant conjecture and biased
opinion.

>With the advice and consent of Congress and the FCC,
> broadcasters have been allowed to abrogate their responsibility to use

Some people like it better when we get groceries at the supermarket and hairspray at the drug store. We actually like specialization.

> been the coup de grace in eliminating diversity, responsiveness, dissent
> ....(even of the musical variety), and innovation in radio programming in
> the US, and much of the rest of the world.

Even if I accepted the US part, please be specific about the "rest of the world" and give some facts. Where? Ecuador? Mexico? Spain? Indonesia? Huh?

You have a big tarbrush if you can indict all the world's radio stations. How many languages do you speak that you can so criticize radio internationally?

>
> More choices is good, right? Or does that only apply when the "choices"
> are offered by the programming departments of a few holding companies in

Which really big broadcast company is in LA or NY other than CBS/Infinity?

How about Dallas, San Antonio, Atlanta, Miami and other more heartland cities? I'm surprised you don't know this with all the stones you hurl. Seems you are aiming at the wrong geographic areas.

I remember an easy listening station in the mid-70s that used to run a half-hour newscast at 1 am (they signed off at 1:30) Even tho their AM station had a big news dept., this newscast was strictly a half-hour of wire copy, with one guy drowning on without a break for 30 minutes. But it counted as news in their requirement for the FCC, although probably no one was listening.

Then there was the little AM country station in the same market with a 15-minute call-in talk show at 10:15pm Mon-Fri. Many nights it consisted of the opening, 15 minutes of instrumental fill music, and the close because no one called in. But it probably was logged as 15 minutes of public affairs programming.

Ron Chapman will move to KLUV on 4 September. Its a secret so don't
tell a soul!
Also KLUV 1190 will go POOF very soon! Its will be religious! (Now if
we could ONLY get another Hispanic noismaker it would just be peachy!)

ALSO KBFB will "bee" no more its signed off the air to return in a week
as an Urban Dance station....whatever the hell thats a copy of! I can
imagine the silly name it will use.

Notice that KLIF has let up a little on overdoing its silly name
BIG570. Its also added "Talkradio" to the name. Whatever they
do....the station is a real LOX!

A few stations...small ones will not change a thing! They got it right
the first time!!!

Auto races are judged by laps and MPH. Kids in schoool get grades. Cops give tickets based on relative speed. The olympics are judged by time and other measures. The stock market is judged by share prices. In radio, audience size is a measure that is generally accurate in measuring the revenue potential and thus, the profitability, of radio stations.

Radio is a business. Even noncommercial stations havd budgets and a fiduciary responsability for their donations and grants. The results of programming a radio stations can not be measured any other way than in the number of people listening. Where is the fallacy in this? Really, now, even a SCA operation that reads books for the blind is going to be measured in the frame of reference of how many sightless people make use of the service.

Radio is about listeners. Serve the principal interests of listeners insofar as aural entertainment and information is concerned, and you will be successful. Play your favoite mixes and hidden album cuts, and you won't.

Right. Because they won't have ratings to be concerned with, and will have to self-finance some other way since, statistically, no one will be listening.

>no more than today's religious satellators are. That's not
> how they're going to be operating.

Almost forgot: the religious organizations have thier own ratings: the amount of $ that comes in from each broadcast of each program from each market that runs them. Commercial religious stations are subject to the donation ratings if they want to renew Jimmy Swaggert and cohorts. It's still a rating as it is a measurement of effectiveness.

Whatever you said, it sounds correct based on my limited ESL abilities at interpreting the last 12 words. I think you got it.

If they publish anything other than 12+ 6 AM-Midnight numbers, they are violating Arbitrons copyrights and station who handed out the numbers is violating thier Arbitron contract.

Generally, newspapers screw up ratings numbers pretty handsomely in most markets, confusing share with ratings, dayparts, and a mess of other things.
>

"Groupie" is not a negative term unless you read it that way. Many of us, and I include myself, were radio groupies who eventually parlayed hanging around at a station into employment. Nothing wrong with a groupie, but they should not be confused with he PD.

We have an FM station here in Haverhill running as a Boston rimshot/wannabee and they had local political talk on a couple of hours of Sunday morning throwaway. In a memorable incident, the host giggled her way through an interview with the city council president. She mistakenly called him "Mr. Mayor" two or three times in a half-hour.

I think the discussion was going around in circles here, now we are getting right down to it..

You are making the assumption that all LPFMers are just going to be people playing their favorite music. While many successful applicants for LPFM licenses will probably do just that (indeed, many small college stations do just that, unfortunately) those writing the checks to pay the bills for many of these stations-- a city's council, or a church board of elders, for instance, will insist that certain requirements be met in regard to programming.

I agree with your last two sentences. However, LPFM (like Internet webcasting) will have lower costs than their full-power counterparts. Talent won't have to be paid, there won't be heavy debt services, and there won't be any stockholders expecting quarterly dividends or earnings recycled into shareholder value. This will permit the LPFMers to experiment and innovate - and some of the innovation won't work.

It would be nice for LPFMers to make the books, but they're not out to do that.

Doesn't matter. If they can't afford under $200 for a service to
ensure legal operation, then they can't afford to operate a station.
It has nothing to do with talent. If they really do have talent, they
should be using it in some entertainment business that's likely to
make it bloom, not LPFM where no one will hear them and it'll die on
the vine.

I've never been kicked out of a party, so I can't speak to that issue.
If this group is so bad, why are you still here? Why are you
contributing to the problem you're complaining about?

Put us "twits" in your twit filter and get rid of the problem. Simple.
It seems the option I offered of actually contributing a viable thread
is too much work.

>No, Rich, I'm confusing ratings with ratings.

No you're not. Newspapers can't publish the ratings that are important
without being a subscriber to the survey. They can publish overall
figures, but not the hour by hour or daypart figures that would give
an accurate picture of how a show is doing.

If you were a radio person, you'd know what the Arbitron contracts
allow and what they prohibit.

>> Who is "we?" Do you represent a group that determines this? Have you
>> done personal research among young males to determine that they "just

First, I'll admit to being the world's worst prognosticator. I heard this
rumor but didn't buy it.

Second, I'll stand by my reasoning for not believing it: I don't think it's a
good idea.

It's been my belief that you just don't screw with a successful formula.
KLUV is doing okay.
KVIL is doing okay.
Both could do better.
KVIL's strength is Chapman.
KLUV's strength is their music.
I can see this move *possibly* helping KLUV's ratings - but maybe not. Changes
like this can have untold consequences.

I don't see how this show helps KVIL's numbers in either the short or long run.
KVIL's numbers after Chapman leaves the air each day go down hill. I think
they run a high risk of getting lost in the AC shuffle with listeners without
Chapman.

I have over 15 years of experience participating in a radio station whose talent is all volunteer. While I wouldn't have it any other way, believe me when I say it certainly isn't all a bed of roses...

> there won't be heavy debt services, and there won't be
>any stockholders expecting quarterly dividends or earnings recycled into
>shareholder value.

No. But there is still the electric bill, the phone bill, and the music licensing bills, at the very least, that have to be paid. Also, every once in a while, the equipment breaks down. If you're lucky, you might have someone volunteer to deal with that, too, but don't be surprised when that person's paying job requires them to spend time doing that first. If your transmitter happens to be down at that moment, things can get frustrating pretty quickly.

> This will permit the LPFMers to experiment and innovate -
>and some of the innovation won't work.

And some of it will. And sometimes there will be arguments over what is innovative and what isn't. You can get a lot of interesting arguments started amongst an all-volunteer staff on that very topic sometimes...

clearly this helps KLUV and when you say both are doing OKAY...that may
be a stretch...both are DOWN...SIGNIFICANTLY...
KLUV has much more competition today, so the music can't carry the load
as in the past...they need something else to get attention..this will do
that, but they also need to become innovative in programming, promotion
and information...who knows that game better than Chapman in Dallas? NO
ONE!
At KVIL, there is no secret they've been attempting to "younger" the
station for some time and while they may beleive Chapman is a liability
vs. an asset, his morning show couldn't have really been hurting them.
But, situation as it is, they obviously DO beleive this and want to make
the morning show more like the rest of the day. It may take time and I
personally wish them lots of luck, but that may be a long haul project!
So what is the end result of all this? KVIL is the number one biller in
revenue and has been for years. Even with ratings downswings that
continues and probably will for some time. They can play off of them
for a while and maybe get the ratings back up and not miss a beat
financially. KLUV is a money maker (not as big as KVIL, but...) and up
until recently has been one of the most consistently rated station in
the market...their billing is not a problem TODAY, with a ratings boost
like they are LIKELY to get with the addition of Ron Chapman in the
morning, his philosophy and promotional mind in the mix, chances are
they will ascend again perhaps to heights greater than they've ever
seen. Anyone who knows Ron, knows there is nothing that gets his
adrenaline going like a challenge. He has just accepted a big one, and
I doubt he'll "roll over"! My 2 cents.

But it
>probably was logged as 15 minutes of public affairs programming.

And it wasn't just the small market stations who played funny-buggers with public affairs. WCFL in Chicago got fined by the FCC in the early 70s for trying to pass off Dick Biondi interviewing pop music stars for a half-hour every Sunday night as public affairs programming.

The bad thing was that 'CFL did on Sunday nights for a while an amazing block of public affairs programming from 10 to 11 p.m., some of it that could be called "NPR before NPR," with the highlight being Jeff Kamen's weekly 10:30 p.m. show, which began every week with Bob Dylan's "The Times They Are A-Changin'" and featured some truly incredible investigative reporting and commentary. However, Kamen wore his political views on his sleeve, particularly with regard to Vietnam, and although that was OK when Ken Draper was running the station, Draper's replacement as GM, Lew Witz, was more of a Chicago Federation of Labor butt-kisser and when the union told him to get rid of Kamen, he did. (Kamen became one of NPR's charter correspondents--I don't know what he's doing now.) At the same time, John Webster left as ND and 'CFL set about reducing a smart, competitive news department to a typical Top 40 operation, with more gimmicks than substance. But those were the days...

Depends on where the money is coming from. F'rinstance - I noticed that you have an MIT address.
I would guess (and this is just a guess) that during some periods of time, there aren't 500 people listening to the MIT station (do they have one) or the Tufts station.

Would either school pull the plug ? I don't think so. What goes on at these stations is probably going to be typical of some LPFM stations.

> Realize, too, that not every listener is going to be a contributor. I've
> heard other non-comm stations say that, for every listener who donates,

Some of these stations will be underwritten by organizations. An example- the Haverhill School Department applied for its own non-comm (pre-LPFM application). The school department has already allocated $30,000 in startup costs, and if the license is granted, its operation will be (preliminarily) funded by the school department.

They won't need contributors - they already have 'em - either a board of trustees, or even, in the case of state schools, the taxpayers.

As it turns out, today's Dallas Morning News confirms that this change
will indeed be occurring. After 31 years on one station, Ron Chapman is
moving.

When the FCC ended AM-FM simulcasting, some AM stations just sold off their FM sides. Others decided to use them and experiment with them. Some things worked, like the "freak" radio format at WBCN-FM in the late 60s-early 70s, where some of the announcers were , I guess, supposed to sound like they were high. A lot of "umms" and "waows" by the staff. Classical music worked, of course. So did instrumental "dentist music" for a while. On the other hand, one station tried an "all automated format" which didn't make it.

A lot of this experimenting continues on AM today, and undoubtedly new things will be tried on LPFM. Some will work, some won't.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

It was called Progressive and was not supposed to sound like
druggies-at-work. It was supposed to be freeform, in the spirit of the time,
and contrarian.

>Classical music worked, of course.

Not always. Most Classical stations in the 60's were marginally profitable,
if at all.

> So did
> instrumental "dentist music" for a while.

It was called "Beautiful Music" and lasted for the better part of three
decades, frequently with market leading revenues and ratings. Hardly a
"while" unless you are measunring from the beginning of creatio, rather than
the beginning of FM.

>On the other hand, one station tried
> an "all automated format" which didn't make it.

What, pray tell, is an all-automated format"?" The sounds of robots and
machinery 24/7?

Automation is not a format, it is a way of executing a format. You'd be
surprised how many highly successfull totally automated stations there have
been and how many there are now and how many are live-assit automation. Of
course, I should think that you are knowledgeable about the industry...
>
> A lot of this experimenting continues on AM today, and undoubtedly new
things will

> be tried on LPFM. Some will work, some won't.

The last significant experiment on AM was the origination of the all-Sports effort at WFAN. Mostly, AMs are experimenting with paid religion, conservative and older leaning (but eminently successful) talk formats and male-talk Sports. Even most of the ethnic programming has left the band. Where has there been a truly innovative AM programming in this decade?

> how to not take sarcasm personally.
>

No, Shawn. If you'll go back and re-read the posts, you'll find that I am
simply "returning what is sent". nothing more. I've said this before and
I'll say it again: I only harbor a deep respect for Rich wood. He has
excelled at what he does and he continues to do so. I do sincerely hope that
he will continue to do so. however, I fear, at times, that this has given
him a "things are better EVERYWHERE in this business because they're good
for MEEEE!" take on things.
In each and every country on this planet, there will be (at least) two
classes of people: Those who have done very well (either through talent,
intelligence, good luck or whatever) and those who have done "average"
(those who may or may not have the same abilities or, just through a "roll
of the dice" happened to be "in the wrong place, at the wrong time").
Ask one of the more fortunate citizens what they think of changing "the
way things are" and, I'm quite sure, the answer will be a VERY adamant
"NO!"... Now, ask a member of the remaining class what THEY think of
changing "the way things are" and you'll probably get a much different
answer. My point being: There may be 50 to 100 "Rich Wood" equivalents (at
most!) in this country. But, for ever one of these "haves", there will be AT
LEAST ten "have nots". But, keep in mind, the "haves" are much more vocal in
their opinions while the "have nots" tend to remain the "silent majority" as
the "haves" usually are the people who both hire and fire the "have nots"...
If you have trouble believing this, go into your bosses office tomorrow
morning and immediately tell him that you disagree with the very things that

made him your boss and you're going to do everything in your power to see that these things are changed including bringing more competition into whatever industry it is in which you work. Then, call me a few days after you're approved or denied your unemployment compensation... Rich Wood reacts in the manner your boss would probably react (I say "probably" because not every person reacts the same but, when confronted with the issue of changing a system that works for "ME SPECIFICALLY", most would really rather not...). In fact, take a look at Rich's reply to one of my posts concerning these issues back on August 5, 1999:

>> It's called a "marketplace decision". You don't seem to object so
>>vehemently when it goes in _your_ favor...

>Would you?

>Rich

Just a few thoughts...

WRKO, Boston featured "ARKO The Shy But Friendly Robot" in the '60's It was pretty popular as I recall and was unabashedly automated. It resulted in the old line WNAC, 680, Boston, changing formats to a Drake programmed Top 40 format. WRKO was very successful on both AM and FM.

Well, it's gone now ....

> >On the other hand, one station tried
> > an "all automated format" which didn't make it.
>
> What, pray tell, is an all-automated format"?" The sounds of robots and
> machinery 24/7?
>

Yes, it was - the sound of robots and machinery (almost 24/7). WRKO-FM used
it. The gimmick was that a "robot" was the DJ - there was no human DJ. Outside

of the songs, you only heard human spoken voices during the commercials, which were few and far between. You heard the standard jingles sung out - "WRKO-FM, More Music" and occasionally the robot (R-KO or Ahr-Kho) would speak.

I was in high school at the time, and we would listen because there was a lot of music, high fidelity, and no commercials. Of course, we weren't thinking that the reason there were no commercials was that not many people had FM stereo radios then, and also that not many people were listening.

That's worked? I don't know. I've seen attempts at "show tunes" -- the station played a steady diet of tunes from Broadway. It didn't work. There have been different formats on the ethnic, mostly Hispanic side, and most of them have been done on AM.

Yeah, but ARKO only lasted around a year and a half.

Perhaps the station management pulled the AR-KO format because it was going to compete head-to-head with the AM station. I'm assuming it was unsuccessful because it never had any advertising on it. WRKO-FM became WROR and if I recall correctly, became an oldies station.

You are correct as far as my foggy memory is concerned. The AR-KO format was pulled from FM when 680 went Drake-Chennault top 40, because it represented significant competition for the AM. RKO General changed the FM's call letters to WROR and made it into a very boring oldies station. For a while, I had the job of unjamming the very tempremental Gates (Even worse than Shaffer) Automation System that ran the thing. When it went down, it went down in a big way. An automated "silence sensor" would kick in and start an auto reverse reel to reel machine that had a very worn out reel of Muzak quality tape to fill in until someone unjammed the infernal machine.

AR-KO was cool. WROR (at least then) was not.

With Clear Channel's purchase of AMFM, they had way too many outlets in
Houston, and this is part of the spin-offs.

Clear Channel sold Cox KKBQ-FM-92.9, KKTL-FM-97.1, and the facilities of
107.5 and the intellectual property of the KLDE oldies format on 94.5.
Clear Channel kept KKRW-93.7, the 94.5 facility, KHMX-96.5, KODA-99.1,
KLOL-101.1, and the intellectual property of the KTBZ modern rock format.

Cox put the oldies format on 97.1 and 107.5; Clear Channel moved KTBZ to
94.5. Most seem to think 97.1 will eventually get a format of its own.
Cox has also bought KKHT-106.9 from Salem and will change it from religious.

The other Clear Channel Houston spin-offs were KBXX-97.9 and KMJQ-102.1,
which went to Radio One, and KSEV-700, KQUE-1230, KJOJ-880, KHYS-98.5,
and KJOJ-FM-103.3, which all went to El Dorado.

New format for 106.9, possible format for 97.1, El Dorado's plans for
all those AMs, plus Cumulus getting a CP to move KAYD-97.5 Beaumont's tower
between Beaumont and Houston -- looks like Houston will have a lot of
activity to come.

A lot? Some companies did not understand FMs, like Storer. They ultimately left the industry. Folks like Doubleday and Woody Sudbrink and Bartell did very well. Fore every non-believer, there was a group of believers. In fact, those who gave up or sold FMs tended to be old-liners who had had the FMs on the air since the 40's and early 50's and had just waited too long for receivers and stereo to come along. They thought they were cutting losses, and that is not hard to understand.

That was simply an isolated incident of an automated station that chose to
make a gimmick out of it rather than doing it right. Not a representative
sample of stations.

WDBN in Barberton (between Akron and Cleveland) trid that briefly in the
early 60's, and on FM. Did not work, either. However, doing it today is not
innovative.

> There
> have been different formats on the ethnic, mostly Hispanic side, and most
of
> them have been done on AM

Wrong. Most Hispanic listening is on FM, and there is 0% innovation on AM, and there has not been for several decades. Generally, you only find Hispanic targeted Spanish language AMs where the market can't support the cost of an FM, or for Spanish news talk. Spanish language music AMs are good only until competed with by an FM, and the N/T stations are about as far from being an innovative use of AM as is possible in the history of the industry. If you had to base most of your answer on a few crummy Hispanic targeted AM stations and, after that, truthfully call them innovative, you are really out of your league.

I believe that what happened in Boston was likely parallel to other Drake
consulted situations. The AM stations became Top 40 monsters with PDs like
Jacobs, Rounds, Seagraves and Klein. The FMs in many cases ran Drake's "Hit
Parade" syndicated format and eventually became full oldies operations. The
model, of course, was KHJ and KRTH in LA.... was KHJ-FM for a while and then
became KRTH.

> FMs here.
> They are all on AM up here.

As I said, Spanish language AMs exist only where FMs are not viable. The total MSA Hispanic population for Boston is in the vicinity of 5.3% if I remember right. Of that group, we can assume that Arbitron is close to the mark in saying that 49% of area Hispanics are English dominant. Extrapolating from experience, we can guess that about 60% of Hispanics will cume Hispanic targeted Spanish language radio stations and that there are probably around 2.5 share points of listening available at best.

Considering that no Spanish language format will possibly get all the listening, it would be optimistic to think that an FM in Boston could get much above a 1.8 share in Spanish. Further, rates on Spanish language stations are generally lower for comparable audience sizes than general market stations and the client base is often smaller. So, to take a full coverage FM, worth, let's say, $50 million and then to bill perhaps $2.5 million with that 1.8 share would produce less than 1% on investment if the station were frugally run.

So, we have low-cost Spanish AM stations pretending to be FMs. Where is the innovation on AM that this represents? That was, of course, the original statement you made... that among the innovations on AM were Hispanic (sic) stations. Again, what is innovative about presenting tired, old formats on AM due to the fact that an FM could not pay its way?

Here in the DC area there are at least 5 different Spanish AM formats.
Mega, owner of three of them, has purchased two rim-shot Class A FMs,
but hasn't yet switched them to Spanish.

From: "Rock-it Radio listeners club" <Rockitradio@earthlink.net>
Subject: Lane Quigley and the Memory Lane show launch show #188

Rock-it Radio listeners club - http://www.rockitradio.net

Guess What everyone,

Lane has done it again, as Rock-it Radio Show Number 188 features THE MEMORY LANE SHOW, with 90 minutes of hard core roots r&b, rockabilly and rock and roll.

Mixed in with a bunch of listener requests, host Lane Quigley gives you the histories of some of the great artists featured in the show, as the Memory Lane Spotlight shines on The Chords, Lloyd Price, The Hawks, Marty Robbins
and Brook Benton.

You'll also hear a 1958 release by Willie Nelson on the Liberty label -- maybe YOU can solve the mystery of whether this was the same Willie Nelson that went on to great success as a songwriter and singer in later years.

And, as a special treat, you will hear a rare, controversial recording that has never been officially released. Lane will play the song and explain WHY the artists convinced their record label to leave this recording on the shelf.

All this and more!! -- Here's the playlist; listen and enjoy:

1. Betty In Bermudas - The Dovells 1963
2. Broke - Chuck Higgins with Daddy Cleanhead 1954
3. Red Tape - The Chavelles 1956
4. The Wedge - Dick Dale 1963
5. Sh-Boom - The Chords 1954
6. Lulu - The Sh-Booms (aka The Chords) 1957
7. No Dough - Willie Nelson 1958
8. Betty Lou Got A New Pair of Shoes - Bobby Freeman 1958
9. Hello Little Girl - Lloyd Price 1957
10. Lawdy Miss Clawdy - Elvis Presley 1956
11. The Hungry Eye - Sil Austin c1959
12. Mr. Cupid -The Vespers 1963
13. Sexy Ways - Gene Vincent 1970
14. Shame Shame Shame - Smiley Lewis 1956
15. Only In America - The Drifters [unreleased] 1963
16. Hey Girl, Hey Boy - Oscar McLollie & Jeanette Baker 1958
17. Chick Safari - Bill Haley & The Comets 1960
18. Sweet Baby of Mine - Ruth Brown 1956

19. He's The Fat Man - The Hawks 1954
20. Red Hot Rockin' Blues - Jesse James 1958
21. Long Tall Sally - Marty Robbins 1956
22. We're Gonna Rock This Morning - Doles Dickens 1949
23. More Handclappin' - Red Prysock 1960
24. Rave On - Buddy Holly 1958
25. Judy - The Ray-Vons 1964
26. I Like My Baby's Pudding - Wynonie Harris 1949
27. Three Way Boogie - Spade Cooley 1946
28. Hurtin' Inside - Brook Benton 1959
29. Jumpin' Tonight - Joe Turner 1950
30. Just Once More - The Paramounts c.1957

To tune into show #188 all you have to do is simply go to our archives page by going to our main website at http://www.rockitradio.net and click to where it says go to archives page towards the top of the page and then click to show #188, for this great show that Lane and the Memory Lane show has come up with.

Remember also that we currently as of this printing have lucky #777 members in the Rock-it Radio listeners club. and if you would like to join and keep abreast of what is going on here at the Rock-it ... and be eligible to win Rock-it prizes .... simply enter your e mail address at the top of our website at http://www.rockitradio.net and click the red "listbot" button, and follow the instructions in your e mail and you are in.

In closing we got some requests for some early Johnny Cash and we will be featuring some of him in an up coming show we promise.

In the mean time .... all the Rockin' Best!

Bennie Dingo

From Greg & Joan...

>>Actually, it is not. It is alive in a new version, called soft jazz. Long
TSL, gentle voices, matched flow sets. Jim Shulke and MArlin Taylor all over
again.<<

Quick and true story about Marlin Taylor...In the late 1970s, I was working booth at TV5 in Cleveland and the late movie one night was Reflections In A Golden Eye, which stars Marlon Brando and Elizabeth Taylor. Of course, in every single bumper, I announced the stars as Marlon Taylor and Elizabeth Brando! Pissed off the PD something fierce, but I never caught the mistake because Marlin Taylor was a familiar name to me. The mistake probably glared to most people, but slipped right by me.

>>WDBN in Barberton (between Akron and Cleveland) trid that briefly in the
early 60's, and on FM. Did not work, either.<<

WDBN was in Medina, not Barberton, and the show tunes format experiment of the early 1960s was a failure for several reasons, signal being the major problem. Medina is west of Akron and south of Cleveland. There is a ridge of high ground south of Cleveland (where Cleveland's antenna farm is) that blocked WDBN's signal from penetrating Cleveland. The station suffered with a lousy signal in Cleveland well into the 1980s when it became WQMX, Akron's country station. One thing WQMX did right was ignore Cleveland and concentrate on Akron, where its signal is excellent.

After the show tunes, WDBN's format evolved into a homegrown Beautiful Music format, and one of its architects was a young Jim Shulke. In its heyday, Jeff Baxter took over the format and, at one point, the morning show was misled by me with the great Walt Henrich handling middays.

From Greg & Joan...

>>Actually, it is not. It is alive in a new version, called soft jazz. Long
TSL, gentle voices, matched flow sets. Jim Shulke and MArlin Taylor all over
again.<<

Quick and true story about Marlin Taylor...In the late 1970s, I was working booth at TV5 in Cleveland and the late movie one night was Reflections In A Golden Eye, which stars Marlon Brando and Elizabeth Taylor. Of course, in every single bumper, I announced the stars as Marlon Taylor and Elizabeth Brando! Pissed off the PD something fierce, but I never caught the mistake because Marlin Taylor was a familiar name to me. The mistake probably glared to most people, but slipped right by me.

>>WDBN in Barberton (between Akron and Cleveland) trid that briefly in the
early 60's, and on FM. Did not work, either.<<

WDBN was in Medina, not Barberton, and the show tunes format experiment of the early 1960s was a failure for several reasons, signal being the major problem. Medina is west of Akron and south of Cleveland. There is a ridge of high ground south of Cleveland (where Cleveland's antenna farm is) that blocked WDBN's signal from penetrating Cleveland. Another Marlin Taylor story.

Shortly after we got the original CP for WHFS(FM), Bethesda, MD, my doorbell rang one Saturday afternoon. The fellow standing there was Marlin Taylor. He was in the Army at Ft Meade and was going to get out soon and wanted a job at WHFS. We hired him for his first real job in radio. He wasn't the best announcer in the world, but he was what we needed to run the station and was a real whiz at music selection for our wide-ranging format. He went from WHFS to the 101.1 MHz startup [WDVR] in Phily when we were about to sell WHFS.

>the Tufts station.

Yep, MIT sure does have a station - WMBR Cambridge MA, 88.1 FM. That's
the one I've been at, in various capacities, all these years. (I'm
not claiming to speak for the station as a whole, though...)

>Would either school pull the plug ? I don't think so. What goes on at
>these stations is probably going to be typical of some LPFM stations.

I don't know what the situation is at Tufts w.r.t. WMFO. At MIT, WMBR
falls under the category of student activity. Student activities here
are pretty much allowed to live and die on their own, depending on whether
there is interest in keeping them going or not. At one point, a couple
of years before I got here, WMBR came pretty close to shutting down
entirely, owing to a combination of an aged, decaying technical plant
(heck, we were still mono up until 1987!) and a lack of student interest.
MIT provides funding for operating expenses, but they weren't interested
in paying the tens of thousands necessary for new equipment. Fortunately,
our listeners have been very generous, and we were able to rebuild with
the help of their contributions. Had it not been for that, I don't doubt
that the 88.1 frequency would be in other hands today.

>They won't need contributors - they already have 'em - either a board of
>trustees, or even, in the case of state schools, the taxpayers.

Be careful. Taxpayer support can be awfully fickle, particularly if some
group of them decides that they don't like what you're airing. Especially
when they get the elected officials on their side.

\
Interestingly, in the 1959-1963 period while working at WCUY and WJMO, my
two favorite stations were WCLV and WDBN. I recall DBN's early beautiful
music incursion. I was in the far eastern suburbs of Cleveland and got them
fine on a portable! I'll bet that the lack of quality FM radios at the time
did have some effect on the ability of WDBN to penetrate the Cleveland
market. It was a nice sounding station! What years were you there?

I don't think KVIL is trying to be a contender to KHKS. The music isn't quite "young" enough. I think KVIL will be somewhat adrift for awhile.

Kidd Kraddick is a great DJ and could do his thing well at KVIL - but I don't know that his audience would follow him to KVIL.

3114. New underground music web radio station

Newsgroup: rec.radio.broadcasting
Date: 2000-07-21 00:00:00 UTC
From: Clicks and Klangs <graham@clicks-and-klangs.com>
Message-ID: <8la3vmoiv1@neptunium.btinternet.com>
Source record: 18520

A new online music zine and web radio station is arriving at
http://www.clicks-and-klangs.com.

Covering a wide range of adventurous and underground music from this and the
last century, Clicks and Klangs features a monthly selection of articles,
interviews, reviews and more.

The first issue features:

** A look at the life and career of Nina Simone
** An in-depth investigation into why the avant garde is such a
male-dominated domain
** A Q&A with the virtuoso saxophonist Tim Berne
** A look at the first four classic albums by Nico
** The first instalment of a regular column from Colin B Morton, who brought
us the acclaimed Great Pop Things cartoon strips.

Clicks and Klangs' weekly web-radio show is now available, covering
everything from hip-hop to Krautrock, free-jazz to drum and bass, post-rock
to psychedelic punk, country blues to electronica. The first edition of
every month will feature music by the artists featured in the latest issue,
giving you a chance not only to read about some of the best of everything
that crackles, beats, swings, samples or soothes, but also to hear it.

For more information, please see http://www.clicks-and-klangs.com Cheers.

All the best,

Graham <graham@clicks-and-klangs.com>

* http://www.clicks-and-klangs.com - The online underground music monthly

Last I heard Kraddick was under a multi year deal at KISS which began
last year. Kraddick would be a great choice - IF he were available,
which apparently won't be anytime soon...Meanwhile, Ken Barnett IS the
guy...they're rebuilding the control room to suite him as we speak.
The fact is, KVIL has the straight ahead AC audience all to themselves.
Mix is Hot AC, KMEO is soft AC oldies, and KLTY is Contemporary
Christian AC. KVIL has it all to themselves at present and may take a
dip initially in mornings, but the rest of the day remains the same.

Actually, WMAQ was changed because Infinity had two viable formats on three signals, and had to sell one of the three stations to conform with the DOJ. They definitely wanted to keep the sports station and one of the news stations so the second news station got the axe. Remember that sports stations when reasonably well don, like WFAN in New York, bill much more than news stations on a ratings point to ratings point comparison. They are usually cheaper to run, too. Why have two news stations an no sports station when you could have one of each?

Oh, are you mad at us or mad at Infinity? Could you turn the caps lock off, as all caps means YELLING.

OK David ..

I didn't mention anything about soft jazz or Martin Taylor -- but when there is a constant exchange of messages, the original poster's tag can wind up over something he didn't post.

But anyway -- yes - but the "automation" I was referring to was a station with a format intended to sound like a robot was running an all-automated station. A soft music station (we in the "unwashed audience" called it dentist music) may have been automated but didn't have an electronic-robot-sounding DJ by design.

You said Beautiful Music (what you called dentist music) was dead and gone.
I mentioned that it had simply changed and was now Soft Jazz. Marlin taylor
was one of the significant Beautiful programmers of the peak years of the
format.

Dip in ratings will be an understatement. KVIL is giving up it's whole
morning team that's been together for a long time. Morning crash is
closer to the truth. KVIL has been on a slide and I believe Ron has sat
and watched the station he gave birth to bleed long enough. KVIL will
never be the same again and as most would guess will be just another
copy of several other stations in the market.

Yes. Duo-Phonic is the term Mike Love of The Beach Boys used when I asked him once about their early mono hits.
A 30 ms. delay is too long to cause a comb filter effect. But it will have an obnoxious echo effect.

WMBR started out life as a ten-watt station, then known as WTBS.
The original transmitter may still be there in a sort of
cubbyhole/closet in the stairwell of the Eastgate building. In any
case, somewhere along the line, Ted Turner decided he wanted the
call letters and so made a handsome donation to the station in
exchange for it giving up the call letters. The station then
became known as WMBR (either "Mass Bay Radio" or "Walker Memorial
Basement Radio" depending on who you ask) and used the infusion of
capital to upgrade the transmitter to approximately 200W ERP.
Although the consoles (hand-built by MIT students in 1960 and 1962,
if memory serves me correctly) were mono, the station was fully
stereo-capable as a result of this upgrade. Henry Holtzman and
Ralph Spicer broadcast a show in "GuanoVision" in about 1984. This
consisted of two completely separate shows, one in the right
channel and one in the left. I believe that was the first true
stereo broadcast from WMBR. In any case, the studio equipment
was not upgraded with the Turner money and although it was old, it
was not really falling apart. The big problem came when the Eastgate
building's roof was redone or mopped or something. The roofers bent
the transmission line to get it out of there way, and it became
incontinent. This led to the transmitter deciding to shut itself
off at random, not a very happy scenario... Except for this, there
was no indication to the listening public that anything was wrong.
The station at that time was staffed mainly by community members who
had no connection to MIT. However, the station's charter required that
the General Manager be an MIT student. The particular GM at the time
was perhaps in over his head and abruptly quit, disappeared even.
The Chief Engineer and Technical Director wrote a letter to the
corporation board that oversaw the station, indicating that the station
was in their opinion dying and the board needed to take action, and that
they would resign if the board did not take action. Well, they ended
up resigning (though they still continued to hang around the station)
and the station went off the air for about a week. At this time, the
board did take some action, putting Bob Connolly (not an MIT student,
but a long-time station member) in charge. His official title was
Program Director, but his unofficial title was God. He got the
station going again and started the first real fundraising effort
(is it still Dept X?). At that time, there was an effort to bring

more MIT students into what was supposed to be a student activity.
The aforementioned Messrs Holtzman and Spicer were two of the first
to show up.

That's the way I remember things, anyway, as one who was there.
And that Chief Engineer? He's applied for an LPFM license in Utah...

Since you obviously did not read the previous posting regarding smooth jazz,
I assumed you had not read the comment about the isolated automation
experiment either.

Of course, you were no doubt listening to one of the innovative Hispanic
programmed AM stations in your market and were distracted by its supreme
entertainment value.

>could be profitable, right?

It not only "could be" profitable for the City of Dallas, it is profitable. They do quite well especially when you consider they have no debt load to service, unlike many of their competitors.

WRR is professionally run just like any commercial large market FM station. It happens to have a Classical Music format, and it is owned by the City, but otherwise it is no different than other stations. It has a very loyal following and actually is quite popular in the market. There is a non-profit organization called "The Friends of WRR" who are well enough connected politically to keep the city from selling it and to keep the format Classical. Without their intervention, I'm sure some other format would be on their frequency.

Speaking only for myself, I'm glad it's here. (I'm not alone.)

Actually, WDBN/94.9 *was* originally licensed to Barberton, Ohio.
I know...I heard the legal IDs on the air back in the early 60's.

WDBN was only licensed to Barberton for a very short time.

Then, the station requested and was granted a change of city-of-license
to Medina.

> > GET OLDER,

But we're doing the reading. You're writing, remember? What YOU
are reading is mixed case.

Makes as much sense as shouting because you're hard of hearing.
The rest of us are not, shouting doesn't help us. And since we're
not shouting, your being hard of hearing requires you to listen
harder. Not talk louder.

Meaning if you're finding it difficult to read mixed case, get
stronger glasses, or a larger monitor. But typing larger, like
shouting to the non hard-of-hearing, only makes it difficult for the
ones who are NOT handicapped.

WRR runs commercials and makes a profit for the City of Dallas. (albeit a small profit) The budget, salaries, and income are all available for viewing in the budget office at city hall.

Well, frankly the recommendation to use a radio station or not to market
a product certainly should not depend on whether they return a DAT or
not!
If your organization is on such a shoestring budget as to not be able to
afford DATs, I think it speaks more for you than them.
If you're in the agency business or whatever it is you do, your client
is not being served if you really aren't using a particular media
for reasons other than them not being affordable or giving you the
demographics you are trying to reach. Have you ever worked for an
organization with as much business as KVIL? It is just possible that
they don't have time to return DATS...

3148. Re: Automation

Newsgroup: rec.radio.broadcasting
Date: 2000-07-22 00:00:00 UTC
From: DAVID MARK <verbiage_spewificator@juno.com>
Message-ID: <20000722.093949.-480091.2.verbiage_spewificator@juno.com>
Source record: 18541

For some strange reason, my last post was on twice. If that happens with this one, sorry.

From David Eduardo...

>>Interestingly, in the 1959-1963 period while working at WCUY and WJMO, my
two favorite stations were WCLV and WDBN...It was a nice sounding station! What years were you there?<<

I think I was there around 1979 or 1980, but only for a few months. Management at the time (Bob and Pam Miller) couldn't decide what they wanted in a morning show and would change their minds about how they wanted me to approach it three or four times a week (really!). Finaly, I told them what they want in a morning show is anybody else, and I quit.

As for WCUY, I have many fond memories of the old place at Cedar and Lee. I was there in the mid-60s and left for good in 1970. Remember how the whole building would creak in a windstorm under the old WSRS 250' self-supporting tower on the roof? Or running the old Wollensak reel-to-reel with the teletype SFX under the newscasts (except that the tape was mostly "clicks" made by stopping the tape while the heads were somewhat magnetized)? Who was there when you were? I worked with Ray Allen, Stu Kovar, Dave Smith, Gary Stark, Shawn O'Meara, Chris Columbi, Ray Hart, and a few others.

You mentioned WCLV. My son is one of their engineers, and I worked there three different times over the years. I was there in the mid-60s (not on the air), around 1970-71 (on the air), and in the mid-90s for a few months (on the air). I must have slept through the 80s.

>>I recall DBN's early beautiful music incursion. I was in the far eastern suburbs of Cleveland and got them fine on a portable! I'll bet that the lack of quality FM radios at the time did have some effect on the ability of WDBN to penetrate the Cleveland market.<<

There were pockets in the Cleveland area where WDBN's signal did penetrate well, and the eastern suburbs were one of those areas, due to being high ground. In the city itself and many other areas, coverage was poor. In fact, the station had a small studio downtown at 18th and Euclid, and you could almost hear them there. Sometime in the late 80s (I think), WDBN was sold and became WQMX. The new owners did something the Millers never wanted to do. They gave up the grandfathered 178,000 watts and opted for a different transmitter site and the equivalent of 50kw/500'. They concentrate on the Akron-Canton market and are doing very well, even though they now have a decent signal in Cleveland. My

son used to be their assistant CE.

> for reasons other than them not being affordable or giving you the
> demographics you are trying to reach. Have you ever worked for an
> organization with as much business as KVIL? I have worked with an organization in
advertising that allowed me millions of dollars in my budget!!! More than KVIL ever thought
of......and had nuclear weapons too! <G> AND I wouldn't say KRLD was small potatos!! It is
just possible that they don't have time to return DATS...
>

Well aren't you special! Thats not the point at all....and you are
misinformed. They SAID they would return the DAT. They said it several
times. Since the client was a non-profit company, I donated my services
and the DATS free. (Some people do that) All I asked was to get it back
in the postage PAID return mail package I furnished to KVIL. All other
stations returned them.....so why can't snooty KVIL? Other stations
appreciated the business. And if KVIL lies about returning
tapes....what else will they lie about?

As for a shoestring budget....you are again incorrect. A LOT of money
was spent. We now spend it elsewhere which is our decision to make, not
yours!

Actually, I think you are just one of the folks on here that likes to
argue no matter what!

I hope you aren't the salesman at KVIL that lied to me several times

Is WJRR in Orlando slowly migrating it's format to something different? It would seem as though the station is going from Alternative Rock to Classic Rock - is there another station in Orlando that is going to take over Alternative Rock? Thanks!

Ray,

Books and newspapers are printed in mixed case because it is easier to read. If otherwise, we would see magazines, menus and such all in upper case. It has nothing to do with PC (whether you mean Personal Computers or Politically Correct) but with readability. Give it a try. I'll bet most readers skip all-cap messages.

Sports formats have considerably greater profit potential than all news, and having one of each is better than having two of one and none of the other. According to BIA, WBBM billed $1 million, WMAQ $20 million and WSCR $9 million. I'd guess that a portion of the WMAQ revenue would go to WBBM, as it is probably going to get somewhat better shares and be the only all news with a good signal for a long time. And moving from signal-impaired 1160 to 670 should give The Score a chance to break into the high teens on lower expenses. Both stations win.

As to persons losing jobs, what about the WSCR people? One or the other of the groups was definitely going to get the axe, as it is possible that 1160 will become a Spanish station if rumors are running true. In either case, some folks lost jobs. Those of us who have been in radio a while know that that is one of the risks of the industry. You have not really been in radio until you have been fired.

The tower at Cedar and Lee was rather interesting as it carried for many
years one of the early pylon FM antennas showing that original owner Sam
Segue had had the vision to keep the FM on the air despite zero revenue
through the 50's until selling to United Broadcasting. Which is another
whole story.

Chiris Columbi was arriving there when I was leaving. I was 1959-1963 with
Dick Ferguson as GM. Ron Seaman was PD. there is a blurry Heights Press
photo of me at CUY at http://www.davidgleason.com/1959-1964.htm

The 60's part would have been when the station was out towards Gates Mills
on Mayfield, if I recall?

From: Paul Kerin <paul@macsandrelax.co.uk>
Message-ID: <964286472.29316.0.nnrp-09.c2dec822@news.demon.co.uk>
Source record: 18546

I was reading some info on MP3s and stumbled across an address for the webcasting ISP site Live365.com.

I am a little confused about Live365s claim to have copyright agreements with ASCAP, one of the organisations that represent recording artists in the states. The interpretation I have drawn from their help pages is that, provided I comply to the broadcasting rules published on the site, I would be able to legally webcast my CD collection via their service with impunity.

Surely not?

Any help from seasoned broadcasters who know about copyright, or pointers to websites, newsgroups or FAQs where I might find the facts about copyright in respect to webcasting would be welcomed.

I would not want Madonna's lawyers on my doorstep the moment I went on air :-)

Well said! In fact I'll admit I added Ray to the killfile, simply because he posts messages in ALL CAPS. Mixed case has nothing to do with political correctness, and in fact it is taught as a standard form of writing in most English classes.

I also forgot to mention that persons with weaker eyesight as well as
dyslexic persons have greater difficulty in reading all-caps as a rule. I
use a large monitor, but still feel the strained visual effects of too many
nights under the dim lights at the transmitter poring over schematics and
little tube sockets populated with color-coded resistors and caps with 6
point type on their labels!

Can you clarify the status of WRR for me? It's owned by the City of Dallas and is non-profit, right? But it's not in the educational/non-profit part of the spectrum so they can and do air commercials. So far as FCC is concerned, it could be profitable, right?

3161. Read this, please

Newsgroup: rec.radio.broadcasting
Date: 2000-07-23 00:00:00 UTC
From: Mike Anderson <mistera@stlradio.net>
Message-ID: <200007230713.AAA00753@mail2.bigmailbox.com>
Source record: 18417

A few years back, Pam Mundy, who did traffic for Brad Hildebrand's CompuTraffic as "Donna Miller" and also did the occasional airshift on KIX104 as her own self turned me onto a pretty neat website/newsgroup/newsletter...Bill Pfeiffer's AIRWAVES.

Eventually I wound up in semi-regular contact with Bill, occasionally by phone, mostly by email. If we were not real friends, we were certainly associates-in-kind, with a common interest if not common goals.

Bill was a unique sort of guy. Economically, I think, he was a conservative, but socially he was a liberal. He was very much in favor of the LPFM movement, for example. Bill's time was entirely consumed by his webwork.

At Christmas-time 1996, a fire destroyed the mobile home in which he and his Mother lived in central Missouri. He lost everything, absolutely everything. Within a few hours he was online telling us the tragic story. Many of us responded by sending him money and equipment to restart because selfishly we didn't want to be without AIRWAVES...and because we all loved Bill.

Bill continued his online work for an interrim period by using public library facilities. His dedication to the services he provided was incredible.

I was able to set up his AIRWAVES server at the ISP I use for many of my websites and AIRWAVES was back in business. The cost was less important than the impact that AIRWAVES had on the radio community. Bill had dropped off a computer to me (we met at a Denny's late at night in Maryland Heights MO while he was on the road to Chicago) to function as the newsgroup server.

Bill's Mom succumbed shortly thereafter because of health complications caused by the fire and he eventually moved to Minneapolis. Then, on September 16th, 1999, Bill Pfeiffer died in an automobile accident. Within minutes of this tragedy, many of us congregated online, trying to figure out what to do.

Bill had created the newsgroup and digest in 1991 and maintained it for eight years, through nearly 5,600 issues. None of us wanted to see it end with Bill's passing.

I did an online research project, which some of you may remember, trying to determine which aspects of AIRWAVES were most important to users. I learned from that project that the newsgroup was least important to users and that the email digest was the most important. The website itself, presenting certain features and access to published copies of the digest came in somewhere in the middle.

I presented this information to Cindy Freeman, who had been Bill's fiance&#65533;, and she asked me to take over the AIRWAVES.com website; she also made an arrangement with Patrick Townson to manage the newsgroup. Unfortunately, Patrick also wanted to manage the website. He had very different goals for it than I did; his intention was to make it simply a weblog of audio streams. After a brief period of intense disagreement we all parted company.

I registered AIRWAVESRADIO.com/net/org and proceeded to develop my new site in a direction that I believed Bill would have wanted.

This made me an evil person in the hearts and minds of many AIRWAVES subscribers who assumed that, without knowing the background info, I was hijacking Bill's work. My site was judged as the "anti-site". I ran it for almost a year but eventually gave it up because I just didn't want to hear any more recriminations. The domain names that I registered are now for sale.

Patrick Townson's vision of AIRWAVES is online at this address; it hasn't been updated since November 1999. The USENET newsgroup that Bill Pfeiffer founded all those years ago is on autopilot (and thanks to John Levine for making this, at least, happen)...if you submit a message and are on the "approved list" it gets posted, regardless of content.

Oddly, Patrick's other websites have been updated regularly and the telephony newsgroups he manages are all being carefully edited by him. I do not understand why AIRWAVES is being ignored.

One more thing: the domain, AIRWAVES.com has finally been moved to a new server, cutting Cindy completely out of the picture...(info directly from the Network Solutions "whois" page):

Who did the hijacking? Looks like Patrick, who actually lives in Kansas, is the culprit. He stole the domain from Cindy (who thought she would own it and apparently does not); I guess that the wonderful thing that was AIRWAVES is gone.

It makes me sad.

Oddly, you're talking utterly through your hat. Pat's
flagship newsgroup was (or is) comp.dcom.telecom, which hasn't
had an article posted since May 15. Its denizens have mostly
moved to the unmoderated comp.dcom.telecom.tech, where Pat's
absence is discussed in current or recent threads such as "
www.telecom.digest.org" and "Moderator of comp.dcom.telecom".

Pat moderated c.d.t for awhile after his Kansas City
hospitalization, but the last that anyone offers on that group is
that he moved to Chicago, experienced other setbacks and has no
access to the net. Like Bill, he has had a long history as a
very honorable, informed and selfless moderator. Given his
circumstances, the reregistration of Airwaves may very well be
John Levine's work. Pat and John's track record inspires me to
give them the benefit of the doubt in this case. I'd bet they're
prepared to do right by Cindy as well, but note that there are no
prospects for ownership "profits" for Airwaves. The best anyone
can hope to do with it as a commercial site...if they're
incredibly diligent and talented...is to use it to own their own
job. Cindy has zero chance of accomplishing even that. I
certainly respect her claim...but she needs to be communicating
her wishes, not you.

Automoderation of rrb is working just fine...and there has
even emerged a sense of collective moderation, of
self-government. So that, if someone takes the discussion in an
obviously non-constructive direction, and someone else comments
on appropriateness, the latter person is more likely to be
supported by the rest of the group, rather than castigated for
anointing himself moderator, as would more likely be the case in
traditionally unmoderated groups. And people who want the digest
format rather than a newsgroup can visit Remarq. We miss Bill
and Pat but have moved on, deep into the future of radio, and
have gone way beyond Airwaves office politics.

Sheesh, what a bunch of hogswallop.

> I was able to set up his AIRWAVES server at the ISP I use for many
> of my websites and AIRWAVES was back in business.

Well, that much is true.

> I presented this information to Cindy Freeman, who had been Bill's
> fiance, and she asked me to take over the AIRWAVES.com website;
> she also made an arrangement with Patrick Townson to manage the
> newsgroup.

That differs, to put it mildly, from what Cindy's told me. Her main concern has been to get the web site and newsgroup to a place where she and Pat can run it and Mike can't interfere any more. I used some informal contacts at Verio, their old ISP, to change the registration so that Pat and I were the visible contacts.

> One more thing: the domain, AIRWAVES.com has finally been moved to a
> new server, cutting Cindy completely out of the picture...

For anyone who doesn't already know, here's the short version of the story: after Bill died, with Cindy's concurrence Pat Townson, who'd been running the Telecom digest for ages, started running it due both to his being an old friend of Bill's and having the technical knowledge to do so. But shortly after that, Pat also got sick with severe cranial bleeding, was in a coma for a month, and I really figured he was done for. But remarkably, he woke up and was able to come back and and do at least a little moderating of Telecom and update the web sites. He's a lot slower than he was (not dumber, just slower) and clearly didn't have the energy to run two newsgroups, so I put r.r.b under the same robomoderation software that I use to run other groups including soc.religion.unitarian-univ (the original robomoderated group) and comp.org.cauce. As others have commented, the robomoderation scheme works reasonably well.

Pat then disappeared again. I don't understand exactly where he is except that he's somewhere in Illinois without a computer and nobody seems to know quite when he'll be back.

In the meantime, I've been in frequent contact with Cindy, and have asked one or two r.r.b regulars to help her update the web site. With luck they'll get to it sometime in the next month or so.

Has a bar and grill ever had a live radio staton based out of it??

When I was in Springfield, MO Hot 106.7 broadcast live from a local club for a few hours once a week, but never have I heard of a Bar/grill with a radio station based out of it full time.

I had a similar idea of having a sports bar with a sports format station inside, but I never heard of anyone actually doing it.

Comments...please!

I certainly am no expert on Swedish or EU labor laws, but this scheme
would be illegal in the US whether the worker was a US citizen or not.
For profit entities are not allowed to use volunteer labor. It is
contrary to Federal and State Wage Hour laws. All labor done for a
for-profit entity MUST be recompensed at at least the minimum wage set
by the applicable wage hour laws for the industry in question.

David...Believe it or not, the original WDBN license was for Barberton or Wadsworth...and it was moved to Medina. I'm not sure how long DBN was licensed to one of those 2 cities (can't remember which town)....but I specifically remember hearing a different city of license as a young radio hobbyist back in the early 60's!

They sure will need contributors. When have you everb seen a board of
trustees to anything more than sit around a table having meetings. Do
you honestly believe a board of trustees is actually going to do some
grunt work?

Actually, WROR in Boston did try the robot approach for a while. The
"announcer" was a robotic voice. Of course, he was supported by a
large cast of behind the scenes humans. It was a nice novelty, but
quickly got boring.

>for MEEEE!" take on things.

Things can be good for "MEEEE" unless they're good for a lot of other
people in this business. If you take a look at my history in this
busines you'll find that I was right on the FM bandwagon. My first
major market FM (WJIB, Boston) was sold for the highest price ever
paid for an FM in its day. It whipped the butts of its competition in
most dayparts. Set penetration at that time was 35%. It was and
exciting change in broadcasting. No fear there.

I got into syndication as it grew to be a dominant form of program
distribution. Again, very exciting. No need for fear.

>answer. My point being: There may be 50 to 100 "Rich Wood" equivalents (at
>most!) in this country. But, for ever one of these "haves", there will be AT

>their opinions while the "have nots" tend to remain the "silent majority" as
>the "haves" usually are the people who both hire and fire the "have nots"...

Most of the changes I've been instrumental in making came from
presenting a viable proposal to an employer. If the have nots keep
their mouths shut, they'll remain have nots. No one came to me and
begged me to speak up and offer something. I did it because I love
this business and wanted to try the stuff. Most important: it wasn't
stuff that would please MEEEE. It was stuff that, I felt, had
audience potential.

>If you have trouble believing this, go into your bosses office tomorrow
>morning and immediately tell him that you disagree with the very things that
>made him your boss and you're going to do everything in your power to see
>that these things are changed including bringing more competition into
>whatever industry it is in which you work.

A good boss would wish you luck in your new endeavor in spite of the
fact that you were a fool to approach him as though he's screwed
everything up. That usually happens to wet-behind-the-ears newbies who
haven't the social skills to negotiate their way into a place where
they can make changes.

> Rich Wood reacts
>in the manner your boss would probably react (I say "probably" because not
>every person reacts the same but, when confronted with the issue of changing
>a system that works for "ME SPECIFICALLY", most would really rather not...).

If someone comes to me with a great idea, it isn't a threat. I've worked in a lot of systems. I've been fortunate in making those systems work for me by making them work for my employers.

My company is spending a lot of money experimeting on the Internet. We've been webcasting our signal for more than 5 years (my idea). We're starting 2 new webcast "stations" very soon. We've had a website even longer than we've been webcasting (my idea) and soon will be available on your cell phone, Palm VII and any other wireless device in whatever form makes sense (my idea). My company said "give it a try."

Far from being afraid of all this, I'm a gadget freak. I love playing with this stuff almost as much as I love playing with big transmitters and successful radio stations. I'm extraordinarily fortunate in having great content, a monster radio signal and a company that wants to expand its brand wherever it can. We're content providers. The technology used to do it is irrelevant so long as it reaches the human beings that make up the listening and buying public.

>>> It's called a "marketplace decision". You don't seem to object so
>>>vehemently when it goes in _your_ favor...

>>Would you?

That would be arguing with success. Not a smart thing to do.

Very little difference. Both are viable. That's why God invented
Subject lines to warn the faint of heart that something fearsome is
enclosed. He also invented twit filters for the faint of heart so
they'll never have to deal with unpleasantness in topics or deal with
individuals likely to disagree with them and upset their Karma.

There are several people/companies who refuse to do business with others
on matters of principal. Look at Dr. Laura's situation. P&G and other
companies now refuse to advertise on her programs despite the high ratings,
on matters on principal. They know Dr. Laura is an effective buy, yet they
refuse based on principal.
As for KVIL..
If KVIL is on such a shoestring budget as to not be able to employ enough
people to adequately run their production department, it says more for them
than Milton.

Rich, this is actually a major change in your perspective. It's not that you haven't always been a tinkerer and an innovator. It's that your broadcaster politics have been straight out of NAB.

So you're looking to cellcast WOR personalities. Will that be one-to-one or one-to-many? Try and do it one-to-many and you're up against NAB. They don't want you bypassing poor little Clear Channel. Broadcasting is for broadcasters, whoever happens to be licensed to AM or FM in a given area, even though your content doesn't get sucked out of the air when one person listens on cellular, any more than when on radio.

Do it one-to-one and your share is shattered because the recipient has to pay, in effect, an exhorbitant nab tax on every increment of content.

If you're ready to support one-to-many cellcasting, you're a content provider. Otherwise, you're still a nabcaster. Please take a stand and let us know where your loyalties really are.

Believe me, we'd love to have your wit and genius on our side. You're downplaying the change, but if you talked to the Times it would probably make Page 1 of the business section. Because you'd be saying that artificial scarcity is a lost cause. That containment ala IBOC is hopeless. That radio broadcasters' only option is to shift gears and leverage their signals for mindshare in an environment of limitless content choice.

To put it in the new RRB vernacular...if content providers get to bypass the broadcaster and use every wireless delivery mechanism the technology and marketplace permit, the competitive significance will be enough to make 80/90 rimshits look like GNATS.

>when you could have one of each?

However, The Score has not pulled in the billings at all in its history in Chicago. If you listen to the station for any particular length of time (and I admire you if you can), most of their spots seem to be either car dealers (trade-outs for company cars for their air staff) and so-called "gentleman's clubs." Not exactly the formula for high billing. That is not going to change by moving the station from 1160 down to 670--unless they start carrying Imus or another high-profile general morning show--that's why WFAN bills as well as it does.

But you are right about why Karmazin sent 'MAQ packing--all-news is a high overhead format and, except for the Gulf War period when they were plugging their CNN Radio affiliation heavily, 'BBM's always beat them bad. In the winter book, WBEZ, the NPR station, beat them. But they still beat The Score--and next Monday for me will be a very sad day for Chicago radio.

Message-ID: <1971394723@mail.krw.com>
Source record: 18445

>As to persons losing jobs, what about the WSCR people? One or the other of
>the groups was definitely going to get the axe, as it is possible that 1160
>will become a Spanish station if rumors are running true. In either case,
>some folks lost jobs. Those of us who have been in radio a while know that
>that is one of the risks of the industry. You have not really been in radio
>until you have been fired.

WSCR's people are all staying. A few 'MAQ people (most notably morning drive anchor Pat Cassidy and sports director Jeff Joniak) are going to 'BBM--Cassidy may've started at 'BBM this morning because Pam Riesmeyer was filling in as main anchor today. Otherwise, a lot of talented people are out on the street as of next week.

The big question mark is evening sports talk show host Chet Coppock, who by all rights should be staying on with the new station. However, a number of the Score's on-air people, including hot-dog-stand-owner-turned-professional-moron Mike North, hate his guts and don't want him on. It also doesn't help that Coppock's well-respected producer took off on her own a few weeks ago for the new Fox Sports Radio network in LA. Coppock may be a blowhard and a weak interviewer, but his show gets the names to come on and he has a good relationship with Budweiser--and car-dealer-trade-out and "gentleman's club" spots-heavy the Score needs all of the money clients it can get.

In addition, the Bears are moving from 'MAQ to 'BBM thanks to a clause in their contract--the owners don't want to be associated with a station that often confuses penis jokes, gay-bashing and sexism for sports discussion.

Meanwhile, 1160 remains unsold--a deal with SBS fell through. The owners of urban talk WVON want to buy 1160 and move their station there from 1450 (which they share with brokered-ethnic WCEV). I think this would be great--it would give Chicago a true alternative to WGN and WLS--but common sense tells me that it won't happen.

Considering WSCR's mediocre ratings & billings, plus WMAQ's already considerable sports content, "Sportsradio WMAQ" probably would have made more sense.

It's actually surprising the WMAQ calls didn't disappear quite a while ago when NBC sold the AM and kept WMAQ-TV.

As far as WOW, the really stupid thing is they don't even use the new calls (KOMJ) except on the top of the hour. (WOW-FM does continue.)

From: Steve Crowley <stevecrowley_iia@hotmail.com>
Message-ID: <20000725044109.52998.qmail@hotmail.com>
Source record: 18354

J Ballard (TK41C) <tk41c@aol.com> asked about Bruce Bradley's 1960's WBZ colleague Ron Landry...

"Buffalo Ron" Landry's experience prior to Boston was on WJMA Orange, CA; WBTM Danville, VA; WSLS Roanoke, VA; with Armed Forces Radio; and as the morning man at WDRC Hartford between April 1960 and March 1966. He developed an extensive cast of characters, with whom he performed "live" by pre-recording parts of the dialog and adding more as the taped parts played back.

Although he relied on tape to make his sketches come alive, his East Coast work was before skimmer cassettes. Landry preserved far more of his material as scripts than airchecks.

In the Spring of 1966, when Landry took over PM Drive in Boston (as Jefferson Kaye departed to program Buffalo's WKBW), WBZ listeners first exposure to Landry was to hear teenage paperboy "Oogie Pringle" take the mike to apologize for Mr. Landry's late arrival for his first shift.

Landry is probably best known nationally for the early 70's comedy album "Ajax Liquor Store" with his Los Angeles broadcast partner the late "Emperor" Bob Hudson at KGBS, 1969-74 and KFI, 1974-75.

After radio, Ron Landry became a comedy writer on the series "Szysznyk," "Benson" and "Gimme A Break" plus supervising producer for the 1980's TV series "Flo." He released his last comedy album with comedian Tom Beiner in 1989.

According to Don Barrett's LA Radio People and the WDRC tribute websites Ron now lives in California and travels extensively.

I don't see it, since I've disagreed many times with the NAB. I do agree (not with the audio demo) but with their stand on LPFM. For me it has nothing to do with fear of competition. It has to do with interference and the nearly 100% chance it won't serve anyone but the preachers and politicians who finally get to own them.

>So you're looking to cellcast WOR personalities.

No. Not to cellcast. That would be terrible waste of effort, battery life and sore arms and thumbs. With a 50,000 watt transmitter that's often receiveable in teeth, it doesn't make sense to reinvent a well functioning wheel. It does make sense to provide other information to WAP enabled devices - program schedules, guest lists, call-in numbers and other stuff listeners regularly request by phone and email.

>They don't want you bypassing poor little Clear
>Channel.

Clear Channel is one of my biggest customers. I don't want to bypass them. I like them. Whenever I talk to a Clear Channel person I get into long, futuristic and nostalgic conversation about how much fun radio is. I'm not giving that up.

>Do it one-to-one and your share is shattered because the
>recipient has to pay, in effect, an exhorbitant nab tax on every
>increment of content.

I have a WAP enabled phone and a Palm VII. I've checked my bills and, nowhere, is there mention of the NAB. I pay Palm.net and Verizon Wireless. The taxes come from the Gummint ("We're here to help").

>If you're ready to support one-to-many cellcasting, you're a
>content provider. Otherwise, you're still a nabcaster. Please
>take a stand and let us know where your loyalties really are.

I'm ready to support whatever works and gives listeners something of real value. You have no idea how many people come to me with webcasting and other non-broadcast ideas. So far, the one I liked best was Cameron Audio (audionet, broadcast.com, then Yahoo Broadcast).

When Mark Cuban and Todd Wagner first came to me the company was
Cameron Audio.

>Believe me, we'd love to have your wit and genius on our side.

Thank you. Come up with something as efficient and reliable as
broadcasting and I'll probably be fascinated with it.

>You're downplaying the change, but if you talked to the Times it
>would probably make Page 1 of the business section.

Nah. The New York Times would probably say "who's he?"

>the technology and marketplace permit, the competitive
>significance will be enough to make 80/90 rimshits look like
>GNATS.

So far, everything trying to deliver audience, except broadcasting, is
a gnat (tiny bug) even GNATS (Guys Nurturing Awfully Tiny Signals), my
suggestion for an LPFM lobbyist group.

Life is rarely black or white. Some of these technologies will have no
reason to exist. Others will take their place among other delivery
systems and life will go on with cigar smoking, pudgy executives
reaping the rewards just like always.

>bird anytime whoever's footing the bill gets tired of the BS.

I give up. Who is? There must be a list of approved topics laying
around, somewhere, so unsuspecting readers won't be shocked by things
they wouldn't like to read.

Do you suppose our benefactor gets a telephone-like bill with topics
and their charges listed? Since this is a newsgroup and not a private
list I assume the awesome cost of "messages Tim doesn't like" get
swallowed up in the general fund and Sprint, MCI, AT&T and other
struggling companies lose stock price whenever they're discovered.

C/Net probably has a financial expert sniffing the net like Carnivore
trying to get a handle on how damaging "messages Tim doesn't like"
really are to the stock prices and the viability of the net.

3203. Re: airwaves-digest V2000 #131

Newsgroup: rec.radio.broadcasting
Date: 2000-07-25 00:00:00 UTC
From: Tim Mauch <tc_mauch@telisphere.com>
Message-ID: <397DC676.2B30670@telisphere.com>
Source record: 18359

We're not talking about topics Tim doesn't like. We're talking about bandwidth-wasting adolescent behavior and attitudes.

Twit filters, IF you have them, don't necessarily mean that the message doesn't get downloaded from the server. And when the subject line is "airwaves..." it's kinda hard to ignore.

Perhaps if you changed the subject line to something like "Rich flaming John" then the rest of us could ignore it the way you want us to.

Or do you consider calling people names to be an appropriate use of a BROADCAST newsgroup?

You're wasting my time, you're wasting my bandwidth, and you're wasting my money, all because you stopped growing-up sometime in the '60s.

THAT is what I'm objecting to, not your so-called choice of "subjects"

BTW, I'm a diehard free speech advocate. Every right has a responsibility associated with it.

You have the right to speak. You DON'T have the right to speak any place you damn well please. Especially when others don't have the right or ability to ignore you without ignoring a whole lot of other people who ALSO have the right to speak.

It all depends on your perspective. See, I think LPFM is
bandwidth-wasting, adolescent and pie-in-the-sky. However, I think
those foolish enough to fall for it should have their say. I don't
want them to "shut up and conserve my bandwidth."

>Twit filters, IF you have them, don't necessarily mean that the message doesn't get
>downloaded from the server. And when the subject line is "airwaves..." it's kinda hard to
>ignore.

Life is dangerous.

>You're wasting my time, you're wasting my bandwidth, and you're wasting my money, all
>because you stopped growing-up sometime in the '60s.

No. It's your choice to be here. Therefore YOU'RE wasting your time
and your money. I hope never to grow up, completely. It just sounds
too boring. I can assure you the '70's was a major growth spurt, so
your timeline is slightly off.

>BTW, I'm a diehard free speech advocate. Every right has a responsibility associated with
>it.

Spare me, please. This is the Internet, not the war room at the
pentagon. My responsibility here is to be reasonably entertaining,
offer a few insights and keep my spelling and grammar fairly close to
English standards.

>You have the right to speak. You DON'T have the right to speak any place you damn well
>please. Especially when others don't have the right or ability to ignore you without
>ignoring a whole lot of other people who ALSO have the right to speak.

I have the right to speak here. That's all that really counts in this
context. That's one of the fascinating things about a Democracy, you
get all sorts of rights, but have to bear with stuff that irritates
you, too.

I think you have a defective or inadequate twit filter. I guess there
aren't any big enough twits to trigger it. Maybe it you who's too
sensitive.

Have a nice day.

From Tim D...

>>...Believe it or not, the original WDBN license was for Barberton or Wadsworth...<<

I believe it. I really don't know everything - I just come across like I do. I'm getting old and my memory isn't what it used to be. After all, they say memory is the second thing to go.

WDBN was only on a couple of years at most before the COL was moved to Medina, where it continues to be licensed to this day, though the station has no physical presence within the town limits (or even in Medina County).

3206. Tower lamps, where to buy

Newsgroup: rec.radio.broadcasting
Date: 2000-07-25 00:00:00 UTC
From: Gene Heskett <engineering@wdtv.com>
Message-ID: <00072412031800.27700@planetx>
Source record: 18362

Hi folks;

On attempting to reach my friendly neighborhood DuroTest salesman last friday, after many phone calls to lots of different numbers I finally was told that DuroTest had filed for Chapter 7 back in Febuary!

As they had the best, longest lasting lamps in the business, this is a major problem IMNSHO.

Attempting to reach someone at Superior Lamp has been equally futile so far today. Friday, at 2:30pm in NJ, everyone had already left for the day. The salesman did return my call, hitting my voicemail while I was up making another tea just now, but a return 10 minutes (and several times since) later has not been successful in reaching a human other than the answering service.

I need a few 660 watt code beacons, and a few 116 watt traffic signals for side lights.

Soo, kind folks, where are #you# now getting good, quality, tower lamps now that Durotest is gone?

Source record: 18365

Just a small clarification of the issue:

The bottom 20% of the FM band is set aside for Non-Commercial / Educational stations. (For now, forget the term "non-profit". That's not really "it". I don't think you'll find that term in the Rules.)

Anyway, If no channels are available for a Non-Commercial / Educational station, they can be (and often are) granted a channel assignment in the other 80% of the FM Band. I suppose this can also happen if an NC/E buys out a commercial station, but they probably get bumped later to the NC/E band, if there's space. (88.1 to 92.1, if memory serves.)

Interesting to note that this does not work in reverse according to the Rules. There should be no Commercial stations in the bottom 20%. (And none that I know of, but surely someone will come up with one somewhere...)

Anyway, just wanted to help you out on the issue of advertising, non-profit, non-commercial / educational and channel assignments. I hope that clears it up.

Perhaps a better question would be whether these rules will hold up under IBOC ?

WJRR switched to active rock almost 4 years ago. It probably is weeding out what is left of the more pop oriented alternative rock songs on its playlist and playing more bands like AC/DC and Van Halen as active rock stations usually do.

An obvious **guess** would be George Washington Univ. [GWU] in
Washington. They have a law school.

People used to razz GWU as standing for Govt Workers U., since so many
of the classes were only given at night school back then.

Oh, la-dee-da! "This is the internet" is exactly the attitude that's going to get Congress to
pass unreasonable laws that will make everybody unhappy.

THAT is what democracy is about, exercising rights with responsibility.

Or, hasn't it dawned on you that, just perhaps, the reason a lot of people are complaining about
flame wars, is because most of them don't approve of flame wars in public? I think it's called
"democracy?"

Duh!

Has it dawned on you that the popularity of daytime TV, essentially,
thrives on "flame wars?" How about morning drive radio?

I always enjoy reading "I'm the last person to favor censorship"
followed by a proposal to censor something.

"Flame wars" on the Internet aren't what will prompt government
intervention. Scams are. Kiddie porn is. Privacy invasion will.
Intolerable spam will. You complaining about me won't.

Even more enticing is the fact that the Internet is something they
don't control. Governments hate it when that happens.

But you're willing to give them the excuse to try...the hallmark of self defeat.

Of course, once they do, you'll be the first to jump up and down about how your rights are
being
violated, AFTER you bring the house down on yourself.

Syracuse University COM 505 Communications Law and Ethics......

An excellent class when I took it back in 1990.

Received near Dayton between 9:30 and 11a Wed, July 26...

From MIA/FLL
-- Love 94
-- WTMI 93.1
-- Power 96
-- Zeta 94.9
-- WRTO Salsa 98.3
-- Coast 97.3

From WPB (or PBI, if sticking with airport codes)
-- WRMF (a little bit of an assumption....the music fit, but I never actually heard an ID)
-- 95.5 (another assumption)

From I'm not sure where
-- 94.3 (basic automation or sat-sounding station playing some variation of AC/bright AC with a straight seg into network news @ ~:50)
-- Salsa on 98.1

It's been a long time since I've caught a good duct / tropo / whatever...glad to have stumbled across it. There's something much more satisfying about it than the relatively easily comprehended "data packet streaming / listening over the internet."

Brian Kelly / Dayton, OH

A man from KVIL contacted me and assures me he finally returnrd the
tape. While I do no remember this, he has no reason to lie. AND I am
on a narcotic pain killer for a while....so I am now rather fuzzy! I do
KNOW that the salesperson involved told me twice he would return the
tape and did not. The man that siad he finally returned it was someone
else.

And, yes, principle does count....even today. So does truth.... even
with a broken arm.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

From: Rich Wood <richbwood@compuserve.com>
Message-ID: <22a0os0dfqf5dt5tqjqtbsl4dr1a7slnno@4ax.com>
Source record: 18379

On 26 Jul 2000 15:38:37 -0400, Tim Mauch <tc_mauch@telisphere.com>
wrote:

>> Even more enticing is the fact that the Internet is something they
>> don't control. Governments hate it when that happens.

>But you're willing to give them the excuse to try...the hallmark of self defeat.
>
>Of course, once they do, you'll be the first to jump up and down about how your rights are
being
>violated, AFTER you bring the house down on yourself.

And you're suggesting that we keep quiet and not wake up a sleeping
government because it might do something we don't like. That's fear of
a government WE'RE supposed to control as citizens. The government IS
going to do something we won't like. It always does.

The bottom line is that "Tim doesn't like it, so it should stop."
Arguments and "flame wars" have become a tradition on the net - have
been for years. In fact, it's one of the best indications that the net
is uncensored and functions just fine, thank you, among people who
don't take themselves too seriously.

I've seen a lot of proposals to govern the net. Not one of them made
any mention of unruly threads of arguments and people not being
"nice." They all had something to do with illegal activity from
pyramid scams to kiddie porn. The religious folks want porn (anything
naked) banned. Brokers want amateur investment discussions stopped.
The gummint doesn't care as much about this stuff as it does about the
net not being sucked dry by taxes.

Imagine a prosecutor going in front of a judge with a case that Tim
and Rich are arguing on the net. Let's fry em. Worry about the big
things. I've changed the subject line to make it easy for you to
filter the messages out and live happily ever after. The electronic
version of burying you head in the sand.

Rich

"Rich Wood" <richbwood@compuserve.com> wrote in message
> I don't see it, since I've disagreed many times with the NAB. I

Rich, you identified yourself as a content provider. The tension between content providers and bottleneck content distributors is at the heart of the public policy debate these days, whether we're talking about Napster, AOL-TW, Microsoft, or CCU/SFX, (the subject of an excellent article in Salon two days ago.)

Content providers and bottleneck distributors have very different biological imperatives. Content providers respect and depend on their distributors. For various reasons you're not going to say anything unpleasant about Clear Channel in this forum, and I have no doubt your esteem is genuine.

So let's talk more obliquely. If you were a shipper of steel beams and spoke about your friendship with the railroad magnate and the importance of a strong railroad system, you'd mean it too, but your interest would not be in dealing with a monopolistic railroad; your interest would be in distributing your "content" at least cost and greatest speed and reliability throughout the world, with an adequate number of alternate conveyance mechanisms competing for your shipping business.

Now, many of your fellow railroad customers would be overjoyed if, as time progressed, new conveyance technologies that promised to greatly reduce their shipping costs became economically viable.

Can we agree that things would be especially intriguing for you if...

(a) the megarailroad was also a major customer for your steel beams, but had lots of choice in beams and was controlling more and more of the distribution chessboard

(b) you still controlled a railroad yourself in a critical hub and had historically argued for railroad owner privilege rather than than for the interests of shipper and end customer

(c) railroads were not regulated as common carriers but had enormous discretionary power to reward friends and punish enemies

(d) your beams, unlike real ones, had a vanishingly small incremental cost of production; your costs were overwhelmingly in the first unit, and you needed widest distribution to amortize them.

These issues would be awkward to address in a public forum, so instead you might downplay the inherent tension and emphasize these interesting side issues:

(1) Your friendship, interdependence or identification with a key player in the railroad industry
(2) The inadequacy of one or another alternate conveyance technology at any particular moment
(3) Your comfort in the certainty that all conveyances would in time be controlled by similarly situated pudgy, poorly-dressed white guys.

(BTW, so are UPS, Bell Atlantic, USPS. Your interest as shipper and mine as end customer are not in the girth, pigmentation, wealth or sartorial preferences of the distributor, but in assuring that the distributor is structured to take the low-cost, high volume approach and has the least political or economic stake in the contents of the package, beyond that required to deliver it properly. I can use Bell Atlantic to attack Bell Atlantic if I so choose; I can't use commercial radio to attack commercial radio.)

Tiptoe if you must my friend; this merest steel beam groupie is here to tell you that he's delighted you're beginning to identify more as a provider of content rather than as one who intensely controls distribution. Our interests will be far more closely allied.

Jerome

hi everyone.
I have an interesting problem and would welcome imput from you. i have a variety of experience in broadcasting, both in front of and behind the microphone. I am presently looking for work, but come up against this concern before each interview. I have a disability, and am never sure weather to inform the interviewer before i come in? on one recent cover letter i made it quite plain, and got a major brush off, while they were rather interested before hearing of my challenge. by contrast, using the same resume without the reference, got me an interview call right away. granted, no one wants to feel uncomfortable, so when interviewed, i am invariably liked, admired, and thought interesting and amazing, however i am *not* hired. I am not seeking jobs for which i want any accomidations, or that i do not already have some experience. Thus, I am not asking anything unusual. I just want to use my ability in an industry i love, and get paid for it. I have another interview on monday, and so am seeking some opinions before i go in. any ideas?
thanks,
karen lewellen

3229. Reposting [WILL-TV] Station Manager position open

Newsgroup: rec.radio.broadcasting
Date: 2000-07-27 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <3980d147.272031195@news.cso.uiuc.edu>
Source record: 18385
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

STATION MANAGER, WILL-TV
University of Illinois at Urbana-Champaign

THE EMPLOYER: The Division of Broadcasting of the University of Illinois operates public radio and television stations serving much of Illinois and half of Indiana. WILL-TV has been on the air since 1955, and is the local PBS affiliate. WILL-AM, on the air since 1922, is an all-news/information service. WILL-FM, which began in 1941, serves 18,000 square miles with 105,000 watts, and is the most powerful station in Illinois. The Division of Broadcasting is housed in a housed in a new broadcasting facility, and is committed to a policy of encouraging the growth and development of its employees. Although results are important, the working environment is friendly, collegial, and mutually supportive.

THE LOCATION: The University of Illinois is located in the two adjacent cities of Urbana and Champaign, Illinois, which offer the advantages of medium-sized city living (110,000 population), with easy proximity to Chicago (135 miles), St. Louis (175 miles), and Indianapolis (120 miles). The university setting (35,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a full-time, academic-professional position. The Manager of WILL-TV is responsible for all day-to-day activities and operations of the station. He/She reports to the Director of Broadcasting and is a member of the Executive Committee, which involves participation in development of policy at the Division level as well as the usual planning, personnel management and budgeting activities of a station manager. A carefully articulated mission statement guides activities. There are substantial opportunities for personal and professional growth in a stimulating environment-as well as challenges and aspirations, which will both encourage and test that growth.

DESIRED QUALIFICATIONS: A baccalaureate degree is required; a graduate degree is preferred. We seek a person with not less than seven years experience in television broadcasting, not less than three of which is managerial in character. Knowledge of the structure of public and commercial broadcasting is essential, as is the ability to work with PBS, APTS, CPB, other public broadcasting stations, and professionals in the field. The candidate must be a person who has the respect of colleagues at other stations and the ability to represent this licensee well in the national discussion about the future development of the system. Leadership ability, good communication skills, a sense of commitment to the mission of public broadcasting, and an understanding of the role of public television in the context of a university environment are all essential.

SALARY & BENEFITS: A starting salary of not less than $75,000 plus a very generous benefits package-including one month of vacation annually, health insurance, life insurance, disability insurance, choice of three retirement options with an employer contribution, sick leave, opportunities for advanced education, and opportunities for professional growth. The WILL stations offer exceptional employment stability to staff members who conscientiously help us meet our goals, maintain the quality of operations, and accept the responsibilities of our Character and Aspirations Statement.

TO APPLY: Send a complete resume with the names of three professional references to the address below. Receipt of applications will be acknowledged, and should be received by September 15, 2000 for full consideration. The position will be available as soon as possible following a decision by the search committee. Applicants are strongly encouraged to request a packet containing further information before applying. The information packet is available from (and applications should be sent to):

Ms. Marge Moluf

3230. [WILL-AM-FM-TV] Assistant Director for Technology

Newsgroup: rec.radio.broadcasting
Date: 2000-07-27 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <3980d180.272087772@news.cso.uiuc.edu>
Source record: 18386
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

ASSISTANT DIRECTOR FOR TECHNOLOGY

WILL-AM-FM-TV, the public broadcasting stations of the University of Illinois are looking for a very special person:

You have at least five years' experience in broadcast engineering (radio, television, or both). You have a four-year college degree (probably an EE or similar, and you feel secure with computer systems and digital communications applications), and you are still interested in learning. The quality of your work is important to you, and you take pride in what you have accomplished and in your potential for the future. You'd enjoy working in a new broadcasting facility housing both radio and television. You want to work in a progressive organization that respects and values its people, and which will encourage your growth, both as a professional and as a person. You want to grow into an engineering management position with stability, a salary of not less than $50,000, and really great benefits. You'd enjoy living in a college town with a strong advanced technology element, many cultural, sports, and entertainment opportunities, and a high quality of life.

If you are the broadcast engineer we are looking for, we will:
* Start you as assistant director for technology, initially working in the area in which you have the strongest background, supervising six engineers and a team of operators.

* Help you to learn from experienced people even more about AM, FM, and TV broadcast technology, directional AM antenna systems, digital television, digital audio production,internet transmission, and more.

* Teach you the leadership skills that will enable you to function effectively as a key member of our management team and as a part of an organization with a special and successful style.

* Encourage you to interact with professional colleagues at the state and national level, sharing your own expertise and learning from others.

* Put you in a position to assume full responsibility in the future for the technical operations of this 78-year-old AM-FM-TV combination which is still growing.

Call or write for complete information about this position and for a full application package. Direct your inquiry to:

Ms. Marge Moluf
WILL-AM-FM-TV
Campbell Hall for Public Telecommunications
300 N. Goodwin Avenue
Urbana, IL 61801
217-333-0850
E-mail: m-moluf@uiuc.edu

For full consideration, apply before September 15, 2000
The University of Illinois is an equal opportunity employer.

Karen;

Don't tell them a thing. Let your work and experience speak for you. By telling them in advance you
are leaving yourself open to the possibility that your disability is going to raise a red flag with a
prospective employer. By letting them see and hear what you can do first you might find that you can
impress people who wouldn't have given you the chance if you had filled in the blanks before hand.

(BTW, I know this is only the Internet, but spell check everything and use proper form. Shortcuts
always lead to trouble in this business!!)

Good luck!!

Tim King

JOAN RIVERS REACHED HER PEAK 20 YEARS AGO. HER COMEDY(IF ONE WISHES TO CALL IT THAT) HAS NEVER TRULY BEEN FUNNY. ONLY DON RICKLES CAN MAKE FUN
OF PEOPLE AND GET AWAY WITH IT. JOAN RIVERS SHOULD BE FINED FOR VIOLATING EPA STANDARDS.

I agree with you - I have never found Joan Rivers funny or even entertaining. Nor Howard Stern. Nor Don Imus. I am proud of the fact that the infamous Opey and Anthony were run out of my home area on a rail.

But there is no accounting for bad taste. It sells and has its audience. The radio researchers might come up with reasons, but most of us just shake our heads.

Maybe some of our New York friends can tell us why, for instance Joan Rivers is apparently popular in New York but the rest of the country hasn't ever warmed up to her? I know they're not #1, but why are Opey (Dopey?) and Anthony apparently popular down there when up here in Boston they fled their rimshot station with nary a serious whimper?

Hey Nik Carter,
I was headed home from the Grill and Groove tonight and heard your send off to Charles Laquidara and D.I.G. I thought it was very well done. I'm really glad you put in a word as well for all the people at BCN and in radio who Charles has helped get into the business. I think there are many many people in the business who don't have access to a microphone who which they had a way to say thanks to Charles as you did and are glad you included them in your statements the way you did. I understand Charles wishes that he doesn't want any sort of large party thrown for him but I think a lot of people have felt that more needs to be said. You did an excellent job of summing up what he meant to you, what he meant to the station and the so many he got into or inspired to get into this strange business. I know me and Melissa where talking the other day at the Blood Drive recently how you could probably fill a one page add in the globe of names of all the people. However by the end of the day we both realized that we'd never be able to organize the effort in time. Great Job Nik and Thanks!

From Rob Andrews...

>>With all due respect... RadioDigest reports that the board-op on duty at the
time of Rivers' comment, was still in-training and had not yet learned where
the magical mute button was. I do agree it is silly to bounce Rivers for a
week...<<

If this is the case...and that's a big IF...how could a board op who doesn't know where the mute switch is be left in charge of pressing that switch? Joan shouldn't be suspended for a week, though a day or two off would, IMHO, be appropriate, since she had no business using that language on the air to begin with (the mute switch/delay system was originally designed to bleep out remarks from callers who weren't used to broadcast ettiquette, not hosts), and whomever it was who decided the person responsible for hitting the mute switch need not know where it is should get a good reprimand, too. As for the board op, I don't know how long a delay that station uses, but (s)he could have had at least seven seconds to ask someone what to do. Granted, by the time the thought of asking might have crossed his/her mind, it might have been too late, and that person should also get some days off.

From tvman...

>>Instead of getting on the jerkoff engineers (including the intern) they suspend Joan one week without pay. Just remember anytime old dickhead/wood tries to flame you, he ain't big time and WOR is a sloppy little AM radio station. In New York, AM radio ain't shit. If WOR dosen't do a better job, their interns will never get into FM or TV where the real money is!<<

According to my MX-5050 BII manual:

Pin 11 -21V, common to stop & play buttons, and record LED
Pin 4 (6) Stop
Pin3 (1) Play
Pin 10 (12) Record LED

Pin 7 (9) "Edit Break"--common to FF, RW and Rec
Pin 2 F Fwd
Pin 1 (3) Rewind
Pin 6 (4) Record

All pushbuttons are N.O.

I have found thru experience that the pin #s in parentheses may also
be used.

Good luck,
Stev

3249. Dallas-Fort Worth Spring Arbitrons

Newsgroup: rec.radio.broadcasting
Date: 2000-07-28 00:00:00 UTC
From: Tom Desmond <tdesmond@sprynet.com>
Message-ID: <39810972.40AAE4C7@sprynet.com>
Source record: 18390

They appeared a couple days ago, and can be seen by anyone for free by going to <http://www.allaccess.com> Radio & Records on line website should also have them online.

So here I will just list the highlights and my comments. First off, the top three are unchanged: Urban KKDA-FM, followed by CHR/pop KHKS-FM and country KSCS-FM. It is interesting to note that while all three stations held their positions, it was also the case that all three shows share jumps ranging from 0.3 for KSCS to 0.6 for KKDA. Moving up to 4th place is country KPLX-FM, moving up 4.6 - 5.2 (comparison is with winter book). Now that DFW is once again a two country station market, both of those stations are doing extremely well. Not a surprise to anyone who is familiar with the area.

Filling out the top 5 is N/T WBAP-AM, moving down from a 4.8 to a 4.2, and dropping to 5th place.

A big leap for NAC/smooth jazz KOAI-FM, which goes from a 2.9 to a 4.1, landing in 6th place. This may well be their strongest showing ever at 107.5 (which they've been on since 1992).

One unbeatable KVIL-FM (AC) continues its slow drift downward, landing this time in 8th place with a 3.8 share. Just below it in 9th is rock KEGL-FM, with a 3.7, down from a 4.0 in the winter. However, this is a major drop from where they were six months back, when they peaked out with a 5.4.

Below the top 10, CHR/rhythmic KRBV ("Hot 100") continues a slow rise, and is now tied for 11th with Hot AC KDMX with a 3.3 share. This represents an almost 1 share increase since last fall. Soon to be Salem-owned alternative station KDGE-FM shows up with a 3.1 share and a strong 13th place showing with their rimshot signal, placing them in a three way tie with sports/talk KTCK-AM and oldies KLUV-FM. For the latter station, this represents a significant recovery from the 2.0 that they had in the winter. Presumably, they will see a further boost this fall when Ron Chapman moves to KLUV.

Down in a 17th place tie with classical WRR-FM, Christian AC KLTY-FM is apparently now feeling the pain from their move off of full signal 94.1 to a rimshotter at 100.7. Their 2.2 share represents a 1.3 point fall off from the winter -- however, I suspect that the $80 million that Sunburst was paid for the 94.1 frequency more than covers any revenue loss associated with the share drop. Also, this station has traditionally fluctuated over a half share range (even at the old frequency), and they may still be establishing themselves at the new frequency -- so in the end, the drop off may not be as bad as it

currently appears. The regional Mexican format on their old frequency (now KLNO-FM) checks in just below with a 2.0 share and a tie for 20th with Clear Channel's rapidly fading rhythmic oldies KTXQ-FM.

Other notable shows (and no-shows): Rimshot urban AC KRNB holds onto 19th place a 2.1 share, which is flat over the past several months, but up from a 0.7 share last summer. Regional Mexican rimshot KTCY holds on with a 1.2 share, virtually unchanged despite the new full power competition from KLNO. Former country station turned hot talk KYNG-FM sinks to a 27th place tie with a 500 watt gospel AM, KHVN -- but in fairness, if hot talk will work, it's going to take some time.

Lastly, I'll note that once again, KLIF-AM fails to manage even a one share on the third best AM signal in town. Perhaps Susquehanna should consider a new format -- all EAS tests, all the time. The ratings really couldn't get much lower, and it would probably cost less to run, anyway.

That's it for now, so everyone can return to their bitch fights and squabbles over capitalization.

It really is a shame. I haven't been a big fan of the record companies since they introduced cd's and stopped selling vinyl (in the US anyway). CD's are apparently less costly to produce, yet were priced 30-40 percent higher than their vinyl counterparts.

If the record companies were smart, they would collectively work with Napster and use it as a vehicle to introduce new artists, new albums etc.., much like they do with radio (last I heard, record companies *love* to have their product heard. Afterall, we don't have to pay to listen to the radio).

As for redistribution, if the record companies would allow free competition among music retailers, prices might come down enough to make it less attractive to spend time downloading entire cd's.

Napster is also a great way to find music that's either no longer available for sale, or not available *period* in any given country. I mainly use Napster to locate music that is simply not available through other avenues.

My Two Cents,

Misty

This incident is still gross incompetence on the part of WOR. Train your board op's after midnight on the Joey Reynolds show where the worst thing they could fuckup is a silly cheese cake commercial that only a few insomniacs wouldn't even notice.

Karen,

This is a question that I have been debating with, myself. I have a condition
known as
"Charcot-Marie-Tooth" disease, which is a congenital nerve disorder that causes
loss of
muscle control from progressive degeneration of nerves outside the brain and
spinal cord,
and I suffer mild hearing and vision loss as a result.

Unfortunately, based on what little information that you have provided, it is
difficult to
assess whether or not your disability is costing you employment opportunities
in the
business. What kind of "broadcasting" experience do you have and what types of
positions have you been applying for?

If you are just trying to land a job as say a DJ, then I'm afraid to say you're
going to hit a
lot of brick walls regardless of your abilities. This is a position that
simply is dying due
to changes in the industry.

Be that as it may, a disability of any kind should not be the basis for declining employment opportunities, and for many years the FCC had EEO rules in place to forbid such discrimination. Unfortunately the whole FCC EEO program is in a mess because the NAB and the FCC can't agree on one set of standards.

Fortunately for me, I didn't have to worry a great deal about my limitations in terms of finding employment in radio, because I now work for a station that I was a student DJ with as a teenager. If I had to go out and find a new job at another station today, I would only list the name of my condition and briefly state what limitations I have.

As with giving information about your experience in the field on your resume, my feeling is that you want to include just the "general" information about your disability. That might mean only including the name of your condition and a brief example of what limitations you might have as a result.

I would also suggest that during the actual interview, that you should not "dwell" on your disability, instead just answer any questions in a positive, matter-of-fact fashion as possible. The employer is probably more concerned with how much your disability affects you mentally, than it does physically. If (s)he feels like you have a negative attitude about your limitations, you are probably not worth the trouble because your negative attitude would rub off onto everyone else.

I believe what I have said here should apply to everyone who has a disability, regardless of what field of employment is being sought. I recall reading an article once (possibly in a radio trade magazine) which stated disabled employees are actually more reliable and devoted to their employer, because they know how difficult it is to find work.

I would like to encourage everyone to visit my website and read the feature story that Al Brumley wrote about me, for the Dallas Morning News. Click on the link to my website below, and then click on the link to the article on my homepage. The article will give some more information about my own experiences with my limitations, particularly my hearing loss.

I wish you the best of luck!

Some do. Some work with other MP3 companies like Winamp. The comparison to
radio is a little different though since the stations have to pay for the
rights, right?

>As for redistribution, if the record companies would allow free competition
>among music retailers, prices might come down enough to make it less
>attractive to spend time downloading entire cd's.

Nevermind that. Just make a website where you can pay a quarter a pop to
download licensed versions. I think they're waiting for the copy-proof
digital audio file to come along, and that isn't going to happen fast if at
all. MP3 is just too established. The "copy-proof" file that was
introduced a while back (was that last year? I can't even remember.) has
all but disappeared. I can't even remember the name!

Okay, so let's say Napster pays for the rights through whatever associations (I'm having a brain cramp). It's the fee is based on revenue, IIRC. I was just thinking this this morning, then you posted this.

If that's true, she deserves the suspension. However inexperienced the
board-op, Joan Rivers has more than enough experience on radio and
television to know the ground rules. It's her mouth, and she's the one who
has to take responsibility for what goes in or comes out of it.

Dear readers,

Need your help.

I am looking for a address or telephone number to reach a radio station
called : Exel Radio in Eastern England.
They are/were broadcasting on 107.150 around Bury St. Edmunds, England
but when I was there last week, they never told their address or telephone
number or what so ever, and I can not listen to them here in the Netherlands
to find out myself.

So, is there anybody in this group from this area, and if yes, is she or he
willing to be so kind to help me with this one.

Your help would be appreciated very much.

Kind regards

Up to 1KW most RCA transmitters had the expensive
plate and modulation transformers and modulation
reactor just air-cooled- no oil. A few capacitors
might need to be replaced, but that's possible.

One point on the curve: the BTA1R was about 1960
or so, the BTA1R1 about 1965 (1 Kw)

Can anyone point me to information about schools
which run their own radio station? We are particularly
interested in an idea we heard of in which the school
produced radio programs are played on the school busses,
either on tape or by low-power FM station.

This seems like an opportunity to involve students in
a creative activity AND produce something for student
minds to be involved with on the bus ride, other than the
amazingly creative misconduct we often see now.

I am a local school board member, and have a background
in Broadcast Engineering, Journalism and Industrial
Engineering. I'd like to get something together that
works, technically and practically, and educationally.

Any pointers or suggestions would be appreciated!

You are probably a potential LPFM applicant. Try contacting the people at LPB, Inc. (www.lpbinc.com). They have worked with schools for at least 35-40 years, setting up carrier current AM and low power FM stations. They also understand the politics of school boards, college administrations, etc. They are also nice folks. I'm sure they can help you.

Rivers made the remark and not the board-op.
If a caller was allowed to slip through then you should ding the board
person.
The host should know the rules also.
What do you think would happen to the board-ops if they started
censoring host?

Source record: 18322

Dear Mr. King:

Most schools that run there own FM station are on the channels reserved for non-commercial use. 88.1 to 91.9 Mhz. Unless you are a LPFM, you have to specify at least 100 watts ERP on the application. To find out where such school stations exist, one good source is the Broadcast Yearbook which lists all the stations in the US and its possesions and Canada.

There must be hundreds of school stations in the US.

If you apply for an LPFM, you can run either 100 watts max. or 10 watts max. That is the lowest breed of cat and allows as little as 1 watt. Believe it or not, you can easily cover a small town with 1 watt given a decent antenna site. Certainly the average HS or college campus can be covered nicely with 1 to 10 watts.

I was the past President and founder of KPOO FM radio in San Francisco, CA. A non-commercial FM on 89.5 Mhz. The original application was for 8 watts atop a 30 story building in downtown San Francisco. It would have, in theory, covered the city! It is on the air since 1973 and is now 270 watts ERP.

I am a semi-retired radio engineer.

If I can be of any further assistance, let me know.

By the way, many years ago I was an electronics technician for Simmons Precision in Vergennes, VT just a tad south of Burlington. You have a nice state!

Cordially,

Meyer Gottesman

Terry,

The Mesquite I.S.D. has it's own radio station, broadcasting with an ERP of 61 kW at 88.5 FM. in Mesquite, Texas. The station has been on the air since 1984, and originally started operation with an ERP of 3 kW.

You might want to visit their website at www.keom.fm and send some e-mail to station manager James Griffin. He might have some suggestions and advice for you.

Or to America's highest billing radio station, bar none... New York AM
station WFAN. And WOR, WABC, WCBS and WINS do handsomely, as well.

British Telecom has an online phonebook, but you'll need to provide something
better than "East England" for the locale.

I believe I've seen (but would have to double-check my sources) that the W and K prefixes were being used before any international treaty assigned them - that in the case of the U.S., the treaties codified existing practice rather than creating anything new.
>>

True.

And Canada's "CB-" calls are an exception to the usual Canadian calls of CF-- through CJ-- and VO--, the latter being assigned while Newfoundland was independent.

CB- calls would normally be assigned to Cuba (or some such place).

At least one N-- call was assigned to broadcast band service in the U.S., namely NAA, Arlington, Virginia, although the 690 kHz frequency and the call was later vacated in order to give Canada another Class I-A clear channel.

Well, I'll speak up for the one rank in your Top 10 that you didn't list: At #7 is Classic Rock KZPS, stable at 4.0 to 4.0, but very happy to be #2 25-54 overall (just a few AQH's behind our sister station Kiss) and in 25-54, we're #5 in mornings, #1 in middays, #1 in afternoons and #3 at night.

for
> a
> week...<<

Rivers made the remark and not the board-op.
If a caller was allowed to slip through then you should ding the board
person.
The host should know the rules also.
What do you think would happen to the board-ops if they started
censoring host?<<

I didn't post the above quote, yet my name has been attached to it. I
posted the follow-up comments which were not included in the above quote.

However, FWIW, the board ops are not there only to mute callers. Board
ops have the final responsibility to see to it that stations abide by the
FCC's rules, no matter who is breaking the rules. Yes, the hosts should
know better, but the final responsibility for what airs rests with the
board ops.

KZPS non-inclusion wasn't intended to be a slam, but since it has been
very stable, there was little reason to list it as widely available as
Arbitron results now are.

There are more exceptions than most of us think. I found 17 on FM alone, not counting Minnesota or Louisiana where the FCC sometimes loses track of the river<g>. KQV Pittsburgh and KTGG Spring Arbor, Michigan come to mind. There are more W's in the West than K's in the East, because the FCC moved the dividing line.

Generally, people have job functions and responsibilities in every line of
work. If the board op was responsible for the delay button, then he is at
fault.

Your post wasn't taken that way. But I would maintain that any station that sustains such stability in a competitive market is as (if not more) worthy of note than stations that constantly bounce up and down.

3291. Re: A question about CALL LETTERS....

Newsgroup: rec.radio.broadcasting
Date: 2000-07-30 00:00:00 UTC
From: SidS1045@aol.com
Message-ID: <10.3f4f3a.26b618c4@aol.com>
Source record: 18345

>>I think the question also might've meant how come they decided to use the letters "K" and "W". At least, I'd like to know that...<<

Long ago, when there was no radio, telegraph stations used call signs to ID themselves....in the format of a single number followed by one or more letters. When radio came along, the letter "W" was placed in front of their call signs, to distinguish "wireless" telegraph stations from regular (wired) ones. "K" was added later, as a call sign prefix for ship radiotelegraph stations. In fact, several of the "K" call signs assigned east of the Mississippi River were assigned because the government, for a short time in 1920-21, assigned call signs to broadcast stations from the call-sign block reserved for ship stations.

ALL of the W-K exceptions west of the Mississippi are east of the old dividing line, which was the Texas-New Mexico border, extended north to the Canadian border.

3292. GOP convention: WHO CARES?

Newsgroup: rec.radio.broadcasting
Date: 2000-07-30 00:00:00 UTC
From: cookeh@aol.com
Message-ID: <20000730204001.25756.00000951@ng-df1.aol.com>
Source record: 18346

Hosts: Ask "Are YOU watching the convention this week?"

Callers' answers -- or LACK thereof -- should suggest how much or how little you'll want to talk politics this week.
Unless your listeners have cable or home satellite, or are REAL webheads, they can't get the gavel-to-gavel coverage that ABC, CBS, and NBC served up in olden times.

The major parties' national conventions used to be NOMINATING events. But with Gov. Bush and VP Gore all-but-officially nominated, that suspense is missing. Now, the conventions are television shows...infomercials for the parties' tickets...not radio-friendly programming.

Talk radio's best bets this week:

1. FOLLOW -- rather than lead -- your callers on this topic. Float it. But if callers don't bite, move on to non-political topics. With many Americans still unable to pick George W. Bush out of a line-up, you'll only sound like an egghead if you make your show a discussion about Dick Cheney. Let CALLERS take you there.

2. All of that said, some stations SHOULD air longform convention coverage. If you're NOT the market's baseball station...if your evening host is on vacation this week...or you are otherwise not displacing a local hit show by doing so, consider gavel-to-gavel audio. Play on radio's ubiquity by telling listeners how to use your station as an appliance: "YOU CAN HEAR LIVE CONVENTION COVERAGE TONIGHT, EVEN IF YOU'RE IN THE CAR OR IF YOU DON'T HAVE CABLE."

3. SELECTIVELY cull the previous nights' most-quotable sound bites for next-day Talk shows. This week, Republicans are making the dubious pledge of "a different kind of convention," WITHOUT a keynote speaker! So there not be moments as arresting as when Christopher Reeve spoke to the 1996 Democratic Convention...or when Caroline Kennedy Schlossberg speaks to this year's Democratic Convention. Don't expect anything too electric from dutiful John McCain.

4. If you clear a network newscast on-hour, plug it as a "CONVENTION UPDATE, EVERY HOUR, ON-THE-HOUR, LIVE FROM PHILADELPHIA," where the major networks will be originating.

My analysis:

1. Both parties are calling Bush's choice of Cheney the-first-real-test-of-the-kind-of-president-he'd-be...and they're right! But not for the obvious reasons. HERE'S THE REAL CLUE Bush showed us with this choice: A more savvy leader would have prepared his organization better. The Cheney choice caught the Republican spin machine off-guard...so they didn't

have rapid-response to Democrats' criticism of Cheney's voting record. This is a life-or-death lesson crafty Bill Clinton learned from the Dukakis campaign. So Bush may be showing us another way he's "no 'Bill Clinton.'" Score one for the Dems, who spent days calling Cheney "big oil" and "an extremist who voted against the ERA and banning cop-killer bullets."

2. Yes, nitpicking Cheney's old congressional votes is partly a bum rap, but it doesn't matter. When Cheney was in the House, it was under Democratic control and Speaker Jim Wright. Many of the votes Cheney's being tarred for now were protest votes Republicans cast against Democratic parlimentary shenanigans such as Suspending The Rules, limiting debate, and amendments. Cheney and his defenders will do more harm than good trying to explain the parlimentary process, which is arcane, and will make them sound like they're making exuses. And Cheney saying he'd vote differently today also exposes him. Al Gore's got some old votes that the other side could spin...but watch how much better the slicker Democratic strategists will be prepared to respond.

3. Cheney's having been Defense Secretary isn't a silver bullet. He himself never served in the military, and Bush's National Guard duty -- like Dan Quayle's -- has already been characterized as a military service option for the privileged. And we're already hearing lots of praise for Cheney-at-the-helm during Desert Storm. If I were ghosting cliff notes for Viet Nam vet Al Gore, I'd tell him to acknowledge "ALL THE BRAVE AMERICANS WHO SERVED IN THE GULF WAR," and allow as how many Americans' only regret is that "PRESIDENT BUSH DIDN'T FINISH THE JOB BY GETTING SADDAM HUSSEIN, WHO'S BUILDING A NUCLEAR STOCKPILE TODAY."

3293. INSTANTLY improve your interviews

Newsgroup: rec.radio.broadcasting
Date: 2000-07-30 00:00:00 UTC
From: cookeh@aol.com
Message-ID: <20000730204405.25756.00000955@ng-df1.aol.com>
Source record: 18347

FREE: In my July '00 newsletter, seven valuable tips from one of the best interviewers in radio.

And I'll admit right now that I'm biased when I call him that. Bill Thompson worked for me three times, as News Director when I PD'd WSNE/Providence; then as morning drive anchor for 7 years when I was Operations Manager of All-News WTOP/Washington; then as the very first on-air talent I hired for USA TODAY Sky Radio. More recently, as I've re-lived my misspent youth doing occasional fill-in DJ shifts on Oldies100 WBIG/Washington, Bill's been the news voice in my earphones.

Based at Metro's superb Washington bureau, Thompson also hosts "Eye On Books," a daily one minute author interview you should consider if you're a Metro affiliate. These pieces AREN'T about books…they're about life. Before he went to Metro, Thompson hosted similar vignettes called "Between The Lines," heard on several hundred AP Radio stations.

Often the authors are stars who happen to be on book tours. I saw him escort Mickey Mantle and Mickey Rooney in-and-out of WTOP. He's introduced me to ex-presidents and other heads-of-state. And Captain Kangaroo. The sound bites you heard on national newscasts when Wolfman Jack died so suddenly were from Bill's interview the day before, the Wolfman's last radio appearance. Nobody who was at Sky Radio the day Ann-Margret visited will forget her weeping. Unlike other interviewers who were bothering her with personal questions about her-and-Elvis, Thompson instead got her talking about entertaining the troops in Viet Nam with Bob Hope. She became emotional describing how much it means to her when a veteran stops her on the street years later to thank her. It was goose bumps radio. And some of his more quotable pieces are authors you never heard of, but whose work has real relevance to listeners.

Oh, there's a debate in the Talk radio community about whether or not we should interview touring authors at all. Certainly, it's smart to pick-and-choose. But hearing is believing, and even if you're not a Metro affiliate or within earshot of one, you can hear Thompson's deft technique on his web site www.EyeOnBooks.com, where several hundred of the 6000 interviews he's done are streaming. Just listening to how he does what he does will be instructive to Talk hosts.

I was flattered to have NAMED his forthcoming book "Now I've Heard Everything!" coming in 2001 from a major publisher. And I'm delighted to be able to share with you what he wrote...just for this newsletter. These tips will help make your work sparkle. For a FREE sample copy of this issue, send a self-addressed stamped envelope to "JULY NEWSLETTER," c/o Holland Cooke, PO Box 1323, Block Island RI 02807 USA. If you're outside the USA, send $1US, so I can purchase appropriate postage here.

3294. New info...

Newsgroup: rec.radio.broadcasting
Date: 2000-07-30 00:00:00 UTC
From: Broadcast Services <hawkfm@peoplescom.net>
Message-ID: <kd4h5.29310$B33.89961@dfw-read.news.verio.net>
Source record: 18348

Also, please note (at least, my regular contacts should note) that we are in the middle of a move in more ways than one. I and my family are moving into a larger home. My consulting firm is moving into larger offices. Our web site (thanks to the "commercail radio attack" of a couple of weeks ago) is moving onto a new server and will now be able to claim "new and improved" status.
Those of you who are interested will be able to temporarily locate us at http://www.radiolink.net/1069 and e-mail us at hawkfm@radiolink.net.
As we are now down to less than a month before the first day of LPFM filing window #2, I still will be able to accept approximately 10 new clients. Of those, several will be "pro-bono" applicants who can demonstrate a true ability and desire to operate an LPFM although they may not be financially capable of "bankrolling" the application. Also, we are offering two financing options... 50% ($374.50) up front and 50% ($374.50) AFTER filing. As well as another option
of $74.90 per month... So, there's NO excuse to NOT be represented from a technical standpoint!
For more information, check out our website at the URL in the signature file, below... Also, please check the website for our new telephone numbers, to be posted after the projected connection date of Tuesday, August 2, 2000.

International treaties spell out (no pun intended) the prefix or first one (or in some cases, two) letters of the call signs by country. For instance, the FCC assigns all broadcast station calls in the United States with the first letter as K or W. A and N are also valid, but are not assigned to any broadcasters. There are 'A' and 'N' stations in other services (amateur, military, etc.)

Note the call signs in Canada - CK.. CJ.. CH.. CB.. and VO.. Mexican stations are assigned XH, XE, and probably others.

Yes, but many other countries got more "meaningful" letters - R and U
for Russia (USSR), F for France, D for Deutschland (Germany), ES for
Estonia, etc.. Surely the USA had the clout to get U, S, or A if it
wanted? There's some reason we chose W and K but I've yet to see any
reliable suggestion of what that reason was...

I believe I've seen (but would have to double-check my sources) that the
W and K prefixes were being used before any international treaty
assigned them - that in the case of the U.S., the treaties codified
existing practice rather than creating anything new.

Face it...she's the one who said it, not the poor trainee who struggled to find a dump button and couldn't.
People forget that she's been around broadcasting since the early 1960s, when she wrote for Allen Funt's original "Candid Camera" show on CBS-TV. She was doing work for on-air projects BEFORE she was a success as a standup comic. So there is no excuse for her forgetting what the "7 words you can't say on the air" are...she's the one responsible, along with whoever put the trainee on the board without preparing him properly.

>through CJ-- and VO--,

Canada's use of `CB' is not internationally recognized. CB belongs to
a South American country (I think Chile). By international agreement,
purely domestic broadcasters are not required to be assigned
international callsigns. Canada finds it useful to assign distinctive
callsigns to the stations of its public broadcaster, but is under no
obligation to coordinate those assignments with Chile.
(Government-owned international broadcasters are apparently also
exempt from the callsign requirement.)

Canada also has `VF'; some very-low-power FM stations are assigned
four-digit numeric callsigns prefixed with `VF'. (Very-low-power TV
stations are assigned similar callsigns with `CH'.)

Most of the CB- calls which Radio Canada operates are Class A stations, which are internationally recognized.

How can internationally recognized stations be considered "purely domestic broadcasters"?

Even the Class B stations which Radio Canada operates are "coordinated" with the U.S., so these are internationally recognized as well.

ALL licensed stations (AM, FM, TV, police, amateur, CB, STL, aircraft, you name it)
in the U. S. of A. are assigned a call beginning with A, K, N, or W. Airplanes?
Look on the side of any non-military aircraft and their callsign is there
someplace. Such as "N37AA".

Bill in Fort Worth

Are they truly "International" or just NARBA?

The stations are not international in audience reache, either in reality or
intent. It is just that they are on channels that are protected
internationally in the NARBA region.

The usage of callsigns is an interesting affair. Except for a few countries, like the US, Canada, Australia, Japan and a couple of others, station call sign usage on air is either limited or non-existent. Last week, in Argentina, I was asked why stations would use their call letters instead of a name. The reasoning was that call letters are much harder to remember than names, so why would anyone want to do something difficult. Another anecdote, lived personally, goes back to the 60's when I was in Ecuador and wanted to have a station that used calls instead of a name on the air and was told I could not use the call letters alone! (Obviously, HCJB was grandfathered in that they do use calls and a name)

Ray, W and K calls were used beginning in the first round of official
license assignments in 1922. By the end of 1922, there were something like
500 or 600 licensees assigned.

I'd guess that's right as the NSW stations always referred to themselves as
"2--", as in 2UE. But I thought there was also a letter prefix in Australasia.

BTW, I was there during the transition from 10 kHz to 9 kHz spacing.

Remember the testing that went on between KFI/640 and KNX/1070 and the
co-channel stations in Australia and New Zealand with one of the pair of
co-channel stations temporarily assuming the 9 kHz-based frequency for testing
purposes?

Australian domestic (MW and VHF-FM) broadcasters don't use
international call signs. Australian international call signs begin
with VL, as in shortwave station VL8A at Alice Springs (which ISTR
reading is no longer in operation). (Most `V' call signs are assigned
to various Commonwealth countries.)

Same is true of New Zealand.

I forget the letter prefix for Australia... apparently they decided to use a number to indicate the region. I know of only one other country which does this, but at the end: Ecuador. Each province or region has a numeral appended to the call to determine the location. Hams have a numeral between the "HC" prefix and the assigned letters: I was HC1DG and my stations were HCRM1, HCFV1, HCSP1, HCTM1 and so on.

As an erstwhile AM DXer, I distinctly remember the testing. I had friends at 3KZ in Melbourne, which moved form, if I recall, 1180 to 1187 at the time, and he told me some interesting stories about the confused on-air personalities who made innumerable and often amusing mistakes in adapting to the new frequencies.

Stands to reason, as I've seldom heard a Chilean station use call letters on
the air... partly because the sets are rather ugly as they combine the CB
prefix (AM) with the significant digits of the frequency... CB114 would be a
Santiago station on 1140, for example. The FMs are worse, with CXA being the
Santiago prefix and some number formula that indicates the order of
assignment appended to the end. Not exactly promotion-friendly!

The number indicates the state within Australia.

All 2--'s are in New South Wales.

3--'s are in Victoria, if memory serves.

It's probably more significant, especially if you are a buyer and want to know what you're getting. If KZPS's demo's are what you are looking for, it would probably be a "reliable" buy. Not many stations can say that these days.

Chuck.

Ray Whitworth sez:

> ''WONDERFULWORLD'.>LOUIE ARMSTRONG ORIG DATE
> 1965, RETREAD HIT'GOOD MORNING VIETNAM'

...actually, "What a wonderful world" was recorded in 1967, two years after the setting of GOOD MORNING, VIETNAM -- and, in fact, had only hit in the U.K.; it didn't hit in the U.S. at all until '87, despite Louis cutting two versions of the song (the original for ABC Records, the remake a couple of years later for RCA Victor)...

...SLEEPLESS IN SEATTLE did the same for Jimmy Durante's version of "As time goes by"...

...another instance would be Roberta Flack's "The first time ever I saw your face," cut and released a couple of years before Clint Eastwood put it on the soundtrack of PLAY MISTY FOR ME but charting only after the movie came out...

...the TV series "Family Ties" single-handedly rescued Billy Vera's "At This Moment" from complete obscurity...

...perhaps another example would be Judy Collins' version of "Amazing Grace," which charted twice, the second time after it appeared on the soundtrack of the movie HAIL; however, that could also have been due to the Royal Scots Dragoon Guards Band hit of the same tune around the same time...

3322. Chart Peak Date vs. Debut Date

Newsgroup: rec.radio.broadcasting
Date: 2000-08-01 00:00:00 UTC
From: robbass2@aol.com
Message-ID: <20000801011229.07414.00000097@ng-fu1.aol.com>
Source record: 18277

Greetings all,

I have sort of a trivial question. I occasionally listen to Mix 102.9 here in Dallas. On weekends they often spin songs from the 1980's. Some hours they pick one specific year and play only hits from that year (i.e. on hour of hits from say 1985...)

What puzzles me is when they play a song claiming it's from one year, when the song actually first appeard in the Top 40 the previous year. For example, "Keep Your Hands To Yourself" from The Georgia Satellites, debuted in the Top 40 in December of 1986. However, the song is played when the year in focus is 1987. Granted the song did come out just a couple of weeks before 1987, technically shouldn't you still say it's from 1986?

My feeling is that you should go by the song's Top 40 debut date listed in Joel Whitburns "Billboard Book Of Top 40 Hits" when announcing or implying what year the song is from.

Comments anyone?

Thanks!

"And we're already hearing lots of praise for Cheney-at-the-helm during Desert Storm. If I were ghosting cliff notes for Viet Nam vet Al Gore, I'd tell him to acknowledge "ALL THE BRAVE AMERICANS WHO SERVED IN THE GULF WAR," and allow as how many Americans' only regret is that "PRESIDENT BUSH DIDN'T FINISH THE JOB BY GETTING SADDAM HUSSEIN, WHO'S BUILDING A NUCLEAR STOCKPILE TODAY."'

Which is all well and good at first glance, but General Schwartzkopf pointed out some very good reasons why "getting Saddam" wasn't such a great idea -- namely that we would have had no support from the rest of the Arab world (and would have had to withdraw from Saudi Arabia), and that we could have ended up embroiled for years in a low-intensity conflict in Iraq with no guarantee of even being able to find Saddam.

If things were so simple in general, we should have been able to soundly kick the VC's butts and have our troops home from Vietnam in 1966!

Several songs were popular in different, non-adjacent years. How would you handle them? The promotion isn't limited to when a song first charted or peaked. The promotion is simply about songs that were popular in a given year. Thus, "Keep Your Hands To Yourself" should be featured in promotions for both years, 1986 and 1987.

I'd tend to go the other way. What about a song that didn't peak
until 6 months after its chart debut? (not all that uncommon these
days). I'd go with featuring it in the year it was a hit.

Not necessarily. Given that most new songs take weeks of repeated playing on the radio before having an impact, a song that was released in December might not have garnered much familiarity until weeks into the next year. Record sales would bear this pattern out, too. A majority of listeners would not even have purchased the Satellites song until 1987; therefore, the experience of most listeners with regard to that particular song would happen in 1987, not 1986. Given radio practices at the time, I bet there were even hard-core Georgia Satellites fans who weren't even aware of the new song's existence until 1987, either. <grin>

Frankly, IMHO, it's neither here nor there. In the case you present, the time difference is so close it doesn't make much of difference either way, e.g. did the "'Sixties" era as we know it really end on Dec. 31, 1969?

Using the date of peak popularity would be a more accurate measure of a song's total impact -- but that would open another can of worms if, say, a song peaked on Jan. 7. Would that mean it wouldn't qualify at all as being a song from the previous year?

You're going to have to accept some kind of compromise.

And, sometimes a song languishes on PDs desks until it's discovered that the song is in the new blockbuster movie and it gets suddenly added all over the country!

That, in a way, also explains the A/C revival of Build Me Up Buttercup.
Aaaaarrrrrgh.

US Navy shore stations have 3-letter N calls such as NPN, NGK, etc. Ships have
4-letter calls; ships arriving or departing port fly their call letters by
signal flags. The N flag looks like a blue and white checkerboard==Ted

Not quite. In the 1920s NAA broadcast hourly time checks from the Naval Observatory, along with occasional concerts by the U.S. Navy Band (!) and some talks by senior naval officers.

"Do you love me?" by the Contours, featured in "Dirty Dancing"

"Shout" by various groups, but the Isley Brothers had the most common version, song was revived in "Animal House" by whoever was in the movie.

"I Will Always Love You" by Whitney Houston, was in a movie "The Bodyguard". An old song, authored by and previously recorded years before by Dolly Parton - which is why it was NOT eligible to win an Oscar; it wasn't written for the film.

"Coal Miner's Daughter" by Loretta Lynn, featured in the movie "Coal Miner's Daughter"

This has been discussed for many months now. WSCR x-820, x- 1160 is taking over the 670 spot. CBS owns all of the above stations including WBBM. CBS must rid itself of 1160 due to FCC rules, so they moved WSCR to 670 and will be trying to sell off 1160.

In the meanwhile, 1160 with simulcast 670 for a few weeks, then simulcast 93.1 WXRT, due to the fact that 1160 and 93.1 are in the same building.

>movie.

Actually, if you get out your Whitburn books or "The Billboard Book of Top 40 Hits," you'll see that Joey Dee and the Starlighters had the only Top 40 version of that song. The Isley Brothers' version was a Top 10 R&B hit and got some pop airplay (including WLS in Chicago), but never made national Top 40. The Isleys' version gets more play nowadays on the tight-playlisted oldies stations because the version in "Animal House" (credited to "Otis Day and the Knights," the fictional toga party band in the movie) was more like the Isleys than Joey Dee's version (the only real difference being the absence of the Hammond organ, which drove home the fact that the song was really a secularized gospel song). And I'm sure that there are classic rock and classic hits stations that follow the lead of the old WRXR in Chicago (now NAC WNUA) and play the "Animal House" version rather than the original--if the song's on their playlist at all. And the guy who played Otis in the movie got his singing career revived by becoming a staple on the oldies club and summer fair circuits. "Otis, my man..."

1160 will not go dark. That is not a reasonable assumption or conclusion. There are reportedly a large number of interested buyers, but the price Infinity is asking for the station is still in negotiation; if the sale does not go through prior to the legal date for divestiture, they will put it into a trust with an independent administrator.

With billings of $10 million, 5th among all Chicagoland AMs, WSCR is hardly a failure for a limited signal. Sports is notorious for high billing and lower ratings but efficient delivery of a key and desirable demo. Infinity consolidates with a single unduplicated all-news station and a sports facility on a vastly superior facility. I'd say they will probably end up billing as much with two stations as they did with the three!

From: prattup@aol.com
Message-ID: <20000802202336.08974.00000349@ng-bk1.aol.com>
Source record: 18213

>robbass2@aol.com (Robert Bass) said:

>you should go by the song's Top 40 debut date listed in Joel
>Whitburns "Billboard Book Of Top 40 Hits" when announcing or implying what
>year
>the song is from.
>

You can look at the various Whitburn books being used as a source, too. "Top Pop Singles" goes by Hot 100 debut date, whereas "Pop Singles Annual" lists the tunes by chart peak date. And, since the "...Annual" breaks out each year in order from the biggest #1 hit down to the "peaked at # 100 for one week" stiffs, it makes for an easier programming tool.

Since the programming is targeted at radio listeners rather than chart freaks, peak date makes the most sense in this case.

Then there are those years prior to Billboard's policy of freezing the year-end charts. If a song has a peak date of January first, remember that in Billboard's lingo, that refers to the week *ending* January first. For example, Simon & Garfunkel's "The Sounds Of Silence" has a peak date of 01/01/66. Six of the seven days it spent at the top that week fell in December of '65. Following New Year's Day, The Beatles' "We Can Work It Out" grabbed the top spot. So you could accurately say that "Sounds Of Silence" peaked in 1965.

And you could accurately say that it peaked in '66, too. After "...Work It Out" ran out of steam, " Sounds Of Silence" came back for another week at #1. (And a week later, "...Work It Out" did the same thing.) When you add it all up, "Sounds Of Silence" spent eight days at #1 in '66, versus six days in '65. So the moral of the story is:

Flip a coin.

And how about "The Twist"? If you want to get technical, you'd have to give the peak year as '62, rather than '60, because it spent two weeks at #1 then versus one week in '60. The song was even more popular in its second run at the top, therefore that reflects its peak point of popularity.

Oh, geez, I've got to get a life...

BTW, I haven't followed the Hot 100 charts in a few years, but at least through the 1980s - and this may still be true - "The Sounds Of Silence" held the record for having taken the biggest one-week fall out of the number one position. After it's second week at #1, it plummeted to # 12 with an anchor.

-John Pratt,
admitted chart freak, now in Whitburn rehab.

wrote:>I GOT A COPY OF LOUIE ARMSTRONG"S 'WONDERFUL WORLD'
>RECORDED ON 'DOT' IN 1964< ITS ON THE LABEL

What is the catalog number on this Dot 45? According to the Directory Of American 45 RPM Records, the only Dot single released between 1963 and 1968 that had Louis Armstrong's name on it was Dot #16619, ""Bill Bailey Won't You Please Come Home" b/w "Five Pennies Saints." The record was credited to The Louis Armstrong Orchestra With Danny Kaye.

When "What A Wonderful World" was released as ABC #10982, it first appeared on Billboard's Easy Listening chart in 1967. It finally "bubbled under" the Hot 100 on July 6, 1968. The song peaked at # 116 after a five-week run.

In any event, many thanks to "Good Morning Vietnam" not only for rescuing this track from oblivion, but for helping to make it a standard. The A & M 45, along with its custom title strip, still resides on my jukebox.

Just wanted to put in a quick plug for my show. If this is inappropriate for rrb, please let me know and I will never do it again.

I host and self-syndicate a show called "The Pab Sungenis Project," which is a weekly hour of comedy and music. We're currently on in Philadelphia on WVLT 92.1 FM, on shortwave on WBCQ, and starting next week in Tacoma, WA, on KCCR.

I'm currently on the lookout for new affiliates. The show is delivered every week on CD and includes 12 minutes of avails. I offer it for free to non-com stations, and for $5.00 a week (to cover cost of the disc and P&H) for commercial stations. If you're looking to fill an hour on the weekends or late at night, you might want to give the show a look.

If you'd like a sample show sent your way, just E-Mail me with your address. You might also want to check out the show's website at http://www.lowbudgetradio.com.

Thanks for indulging me.

-!-
* BM 1.0 * From the town that rocked the nation, Philadelphia, PA.

>1987. Granted the song did come out just a couple of weeks before 1987,
>technically shouldn't you still say it's from 1986?

Technically, we should use the date the song was recorded, but in some
cases, songs were recorded/released years before becoming hits.
Roberta Flack's "First Time Ever" was released 2 or 3 years before it hit
pay dirt, but didn't do anything until Clint Eastwood included it the movie
Play Misty For Me (which used to give jocks nightmares). Then it shot to
#1.
Simon & Garfunkels "Sounds Of Silence" was another example.
As for using the first date it hit the charts, I believe Don McLean's
American Pie spent most of it's time on the Hot 100 in 1971, but it is
considered one of the biggest hits of '72 since it peaked in January 1972.
To further complicate things, Billboard used to cut off the 'Chart Year" in
early November so they could get the "Top 100 for the year" charts assembled
for all of the year-end countdowns.

KDKA - Pittsburgh (not Pittsburg)
KQV - Pittsburgh
KYW - Philadelphia
WIBW - Topeka, Kansas

It think it was originally set up rather arbitrarilly. You might also have noticed that with the few exceptions. Land based stations in the east kave W--- call signs wile marine stations have K-- callsigns. In the west it is just the opposite. Land based stations have K--- callsigns and marine stations have W-- callsigns.

I was in the U.K. in the summer of '68 when that song went to the Top Of
the Pops, in June...along with "Baby Come Back" by the Equals and some
other great material.

I had assumed it was also a big hit in the states. Imagine my surprise
when in July I returned and no one, I mean no one, had heard it. I was
asking people on the street corners, they looked at me like I was
cukoo. That's why I stay clear from busy streets these days.

A very foolish move. Besides PCB issues, tubes that can still be purchased are now many times the price they were in earlier times. Power consumption is many times that of an up to date TX. A transmitter 50 or 60 years old will have decaying wiring and/or numerous modifications, often undocumented. The old units are very large and heavy + costly to ship.

how much power is this non com station? You can find used newer models that are more economical to operate. At 1KW or under you are pretty well forced to consider solid state, as the tubes at that power level have become very expensive.

Message-ID: <F256viF0Hr5F5wsbpD600004ff1@hotmail.com>
Source record: 18226

Sometimes one person's mistake is another's unique perspective. There can be legitimate disagreements based on regional differences, but others that inadvertently come from misunderstanding chart methodologies.

As another contributor pointed out, not all of Joel Whitburn's Billboard chart compilations record the same landmark date. Similarly, programmers don't always enter Selector database "YEAR" fields consistently. And if they reflect their particular station's track record with a particular song, it could well be at odds with what happened in other markets or nationally.

For instance WBZ Boston's exposure of shared titles was typically 3 to 4 months ahead of WABC in New York during the mid sixties period that forms the nucleus of "Good Times & Great Oldies" formats today. So if WODS in Boston uses Whitburn references they are probably late for what a native WBZ listener remembers, and WCBS-FM in NYC is too early for dates a WABC listener might recall.

During that era there were also some hits that moved from regional to national labels, some built slowly, others had people lined up at the record store on release day... complicating those who would document hits' lifecycles.

How about songs whose chart history straddles consecutive years? WABC had some that made year end charts in successive years with no clear advantage for either year:

It Never Rains in Southern California = Albert Hammond
1972 #88 / 1973 #82

You Don't Bring Me Flowers = Barbra Streisand & Neil Diamond
1978 #43 / 1979 #48

You're The First, The Last, My Everything = Barry White
1974 #54 / 1975 #53

And there are examples of others where there was an advantage to one of the years, yet the song's end of year chart impact was diluted by being spread over two years:

I Love The Night Life = Alicia Bridges
1978 #55 / 1979 #76

No More Tears (Enough is Enough) = Barbra Streisand & Donna Summer
1979 #15 / 1980 #68

Come Together = Beatles
1969 #56 / 1970 #81

That last one's a great example. "Come Together" peaked at #1 in 1969 in Billboard, yet didn't make Top 50 in either year end chart at WABC.

Another thing to remember is that a "chart year" varies with different publications, and tabulations end before the calendar year is over.

In Radio & Records year end tabulation published December 12, 1997, the "Active Rock" section reports Metallica's "The Memory Remains" peaked on 11/28 and "Hero of the Day" peaked on 12/13. Both appear in the 1997 year end chart, yet "Hero" is a leftover from 1996 - a song which would have been reported with a lower rank on the previous year's chart, then peaked after the 1996 publication date... and "Memory" was a new release with only four weeks in the survey and thus carried over into 1998, as well.

Remember, like movie box office figures, not all #1's are equal. Chart rankings are only valid relative to the competition out at the moment. Boyz II Men had a staggering number of weeks on top of the charts with "End of the Road" in 1992, but that year's competitive environment plus a chart influenced by SoundScan and airplay factoring was vastly different than when Elvis set the previous record for weeks at #1 with single sales alone more than 30 years before.

Bottom line for me... it doesn't matter that much except as a memory aid. With apologies to my former colleagues at American Top 40 and KIIS-FM, where the Weekly Top 40 is produced, chart mechanics is a trivial pursuit at best.

While I'll accept that Louis Armstrong's "Wonderful World" was originally released on ABC, at some point in the early 70's, ABC acquired the Dot label and catalogue. Both were later acquired by MCA.

I'm wondering if the record in question was a reissue on the Dot label? Or an import?

PVH>
PVH>My kids won't listen to AM -- I've never known anybody who wouldn't
PVH>listen to FM!

Funny thing. We have an AM/FM combo here in South Jersey, WSNJ/WSNJ-FM. The FM simulcasts the AM. One little glitch in the AM signal and the phones light up. Not too long ago, the FM was off the air for three hours before anyone realized it.

Of course, WSNJ's target demo is what we like to call "65 to death," so age, stubbornness, and perhaps even a lack of an FM radio could be elements in that.

>To further complicate things, Billboard used to cut off the 'Chart Year" in
>early November so they could get the "Top 100 for the year" charts assembled
>for all of the year-end countdowns.

An abhorrent practice which lead to some ridiculously inaccurate year-end
countdowns on American Top 40 in the 70s and early 80s. # 1 songs, showing up
in the bottom rungs of the survey because they peaked late in the year,
late-year hits showing up in the next year's survey, etc.

Perhaps the worst example of this was the injustice done to Debby Boone's "You
Light Up My Life." With 10 weeks at # 1, it was the biggest hit of the 70s and
actually the biggest hit since the 50s. But since Billboard cut off the survey
period on 11/1/77, it was only ranked # 51 for the year. Since Billboard would
not even credit it's entire chart run for the following year's survey, it was
only ranked # 3 for 1978.

Always? Always?? Not when I listened to it in the 40's and 50's and bought
time on it in the mid-60's :-). In fact, it hasn't been known as "67 MAQ"
during most of its long, long history.

>> BTW WMAQ has always been know as 67 MAQ.

I work for WMAQ in the '70's. It was, at various times, 67 Q or 670 WMAQ, but never 'MAQ on the air, any more then WGN was 'GN or WBBM-AM was 'BBM except in industry shorthand.

When I started at WMAQ, in 1971, it was a consistent top two with WGN. No one saw the quick rise of FM coming, and when it did, management paniced. WMAQ dropped personalities, (Heny Cooke, Pat Sheridan, Jim Hill, Jack Eigen), tried to re-cast itself with jocks from elsewhere (Jimmy P Stagg, Joel Sebastian, Clark Weber, Howard Miller-all pros, but mismatched), dropped sports (Black Hawks-Lloyd Pettit, White Sox-Bob Elson, Northwestern University football and Loyola basketball-Red Rush, and letting go a future President of ABC Sports, Dennis Swanson), cut back on news (Frank Barnako, Bill Lindsey). As the ratings dropped like a rock, the brain trust changed formats every year (MOR to talk to Country to News to Country To News), What was a powerful outlet became a joke. WGN, on the other hand, kept its personalities, (Wally Phillips, Roy Leonard. Floyd Brown (who moved to WGN after the first panic attack), Bob Collins/Carl Grayson (what a combo they were)), kept the sports (Cubs, Bears, college football), kept the farm news (Orrion Samuelson), kept the format, and is still dominant

>I was in the U.K. in the summer of '68 when that song went to the Top Of
>the Pops, in June...along with "Baby Come Back" by the Equals and some
>other great material.

"Good Morning Vietnam" also brought James Brown's "I Got You (I Feel Good)" to the attention of a couple of new generations.

The Equals! What a great song! Too bad that RCA couldn't really bring it home here in the States. Their follow-up, "Softly, Softly" fared worse. It probably didn't help that Laurie Records handled distribution under the President label - the original British label.

How 'bout other stuff that didn't make it over here? The Casuals had a biggie or two ("Jesamine"), DDDBM&T scored with "Legend Of Xanadu" and "Wreck Of The Antoinette," Aphrodite's Child ("Rain & Tears", "End Of The World") and on and on. Say what you will about Napster, but it's a great way to learn of some of these lost greats.

Thank you all for the great history and well thought out information.

Thanks also for correcting me regarding the 67 MAQ business. Your information is as always of intrest to me. I like being informed and sometimes corrected whenever possable.

Here in Kalamazoo Michigan where I live I'm able to receive both 670 WMAQ and 1160 WSCR at one time known as WJJD and can also receive 890 WLS 780 WBBM and AM 1000 WMVP at one time known as WCFL.

Thanks again for preforming such a great service.

Huh? Board ops have no more responsibility for a station's compliance with
the rules than anybody else in the building (unless of course station
management makes rule compliance part of the ops job description). In
general, the _producer_ is the one charged with seeing that air content
abides by the rules. The board ops job is to follow the producer's
instructions and mix the audio in the desired fashion. Ultimately, the
station owner is responsible for rule compliance. How that's accomplished
depends on how the implementation of the rule enforcement is delegated for
day-to-day operation.

Kind of got into this a little late, but to the person that said the suits killed WMAQ and that 1160 will be sold or go dark, I think you have your information a little wrong.

CBS which owns 670, 780 1160, et al has to sell 1160 in order to keep the other stations. Lets see, keep 2 50kw-U stations and sell 1160? Or Keep 1160 and sell one of the 50kW? hmmmmmmm How about blaming the FCC that has the rules to sell these stations?

Since they own 2 competing all news stations, why not cut that down to one and move a somewhat successful sports station to 670?

Is this a simple decision or am I missing something?

BTW, 670 is still WMAQ until (I think) Aug 15, but they are calling themselves The Score 6-70.

It may have been promo-only. Dot's numbering sequence was a four-digit series that ran up through #1289, then switched to a five-digit sequence that began with #15001.

I have a Dot white label promo 45 - no number on it - from 1967. Are you ready for this? It's Pat Boone covering - of all things - "I Was Kaiser Bill's Batman." It's about 85 percent instrumental, with ol' White Bucks finally coming in at the very end.

I can just picture the Dot brass saying "OK, 'Beach Girl' wasn't the answer, but let's test the waters with 'Batman.' It'll bring Pat back to the top for sure!"

Maybe "Batman" would have worked for Pat as a metal / lounge thing...

Unless someone objects, I won't bother with the standard legal ID rules at this point. My question has to do more with how you can do a legal for two stations sharing a city of license. To be legal, would the two Chicago stations have to ID as "WSCR Chicago and WMAQ Chicago" or is there something that could be done like "WSCR WMAQ Chicago".

When I used to live in New Jersey, I used to listen to WPAT on saturday nights for "Best of Broadway." Jay Victor did the legal at 6PM as "WPAT AM and FM Patterson" Is that legal for a simulcast?

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Err, watch your quotes. Be careful. No way did I write the above. In fact,
my last post on the matter was to contradict the above. That is, WMAQ has
NEVER been known on air as 67 MAQ. And that's the truth.

Considering the timing, it must relate to a viacom TV station, since the infinity radio group has been relatively stable for a few years.

So change the statement, keep 2 50KW-U stations and sell 1160 to sell 1160 and have 2 TV stations in the #3 market. hmmmm

And the movie was a bomb - Didi Conn playing the lead .... OK.......

Well, I have to admit that casting was a lot funnier than Joan Rivers'
remark.

I do know about the 1000 series, but with the reference to the above as
a 1964 release, it wasn't exactly on point. To be more exact, several
of those 1000 series releases were reissues of 1940s r&b/c&w material
from labels like Bullet, Exclusive, etc. Very hard to find, interesting
as Dot is thought of as the epitome of pop.
>
> I have a Dot white label promo 45 - no number on it - from 1967. Are you ready
> for this? It's Pat Boone covering - of all things - "I Was Kaiser Bill's
> Batman." It's about 85 percent instrumental, with ol' White Bucks finally
> coming in at the very end.

Good one. But, I can outdo any private pressing on Dot...this one is a
45rpm white label pressing of Robert Goulet singing "I Love You & That's
No Sh*t" - with the inscription on the white label - "Randy, our next
hit." Got it from an ex-employee of the label.

Can you top that?

Steve

I think there was a recent change in the rules, since the present
"infinity radio group" was formed. I think it went from a max. of 8 radio
stations and 1 TV in a market, to 7 radio stations and 2 TV's in a
market, at least that's what the prospectus for the Viacom/CBS/Infinity
merger says I think Viacom/CBS only has one TV station in the Chicago
market, but I am not sure without looking it up. I remember wondering why
they couldn't work a deal with the FCC to keep 8 radio stations, at least
until they wanted to buy a second TV station.

From Robert Meuser...

>>DAVID MARK wrote:

> However, FWIW, the board ops are not there only to mute callers. Board
> ops have the final responsibility to see to it that stations abide by
the
> FCC's rules, no matter who is breaking the rules. Yes, the hosts
should
> know better, but the final responsibility for what airs rests with the
> board ops.

you just described a producer. board ops are there to make sure whatever
is said airs clearly at the producer's direction.<<

True...in the corporate world. The FCC doesn't care about corporate
world titles. In the end, the responsibility for what finally hits the
airwaves rests with whomever controls the mute button. Previous posts in
this thread from others (which is the only info I have to go on) have
indicated it was the board op in this case. The company would blame the
producer. The FCC would place the blame on whomever holds the switch.

3405. WWVA's Nightime Status?

Newsgroup: rec.radio.broadcasting
Date: 2000-08-04 00:00:00 UTC
From: Kaimbridge <kaimbridge@my-deja.com>
Message-ID: <8merpj$vs4$1@nnrp1.deja.com>
Source record: 18111

Has WWVA either been with reduced power or changed its nightime pattern?
For the last several months--nightly skywave propagation flux taken into
account--their signal up here in Boston has been weak at best (usually
they're booming).

~Kaimbridge~

Looks like the propagtion is all fluxed up! LOL!

When I was a kid living in Brooklyn, NY in the 50s, I
used to listen to WWVA as I enjoy country music.

We are at a sunspot peak you know. Great for hams
(like me!) but lousy for MW propagation.

I doubt if a professional operation like WWVA would
have night pattern troubles.

By the way, I used to be Chief Engineer of a Boston
AM/FM.

Cordially,

Meyer Gottesman
(semi-retired radio engineer. Macon GA)

...I've heard rumours in the last couple of weeks to the effect that Viacom/CBS is trying to buy out all of the major market UPN affiliates it currently doesn't own, including Fred Eyechaner's WPWR Channel 50 in the Chicago ADI. That could play into this scenario...

...hmmm...and this from the label that considered the Jack Kerouac/Steve Allen album to be too "pornographic" to issue :-) ...

I was always told that a legai ID, for, say WLS AM and
FM would be "WLS,WLS-FM, Chicago). They used WLS AM
and FM when they were simulcast, and many other
stations ID that way, legal or not.

>Unless someone objects, I won't bother with the standard legal ID rules at
>this point. My question has to do more with how you can do a legal for two
>stations sharing a city of license. To be legal, would the two Chicago
>stations have to ID as "WSCR Chicago and WMAQ Chicago" or is there something
>that could be done like "WSCR WMAQ Chicago".

IIRC, back in the early 70s after WLS-FM had switched to progressive rock and changed its calls to WDAI, it continued to simulcast WLS-AM's Sunday morning pubaffairs and religious shows. At that time, the regular legal ID was a spoken "WLS Chicago" over a synth version of the 'LS logo (the hour opener jingle, with the "From the city by the shore...The (name of jock) Show" voicer) was heard after the first song of the hour at about :03 during music programming). On Sunday mornings, the same voice said over the synth sting "WLS--and on FM, WDAI Chicago." Now this was right before the FCC clarified what a legal ID is in exchange for only requiring them once an hour--and by that time, WDAI and WLS had stopped all simulcasts, so I'll never know if they had to change it. I would suspect that "WMAQ/WSCR Chicago" would be perfectly legal (although I have the feeling that instead someone at the 670 transmitter in Bloomingdale is hitting this week and next a cart with a garbled voice saying at a very low level "WMAQ Chicago" at the top of the hour to make it legal).

>When I used to live in New Jersey, I used to listen to WPAT on saturday
>nights for "Best of Broadway." Jay Victor did the legal at 6PM as "WPAT AM
>and FM Patterson" Is that legal for a simulcast?

Perfectly legal and done all the time--to bring up WLS again, in the 80s when the calls of the FM station were back to being WLS-FM and John Gehron was more or less programming the same format on both stations (with the FM being a little rockier than the AM), when Larry Lujack in the mornings and Brant Miller in the evenings were simulcast, the JAM singers sang in the legal ID jingle, "W-L-S--A-M and F-M ChiCAAAgoooo!"

And back in my college radio days, even though our station was a carrier current AM and a cable FM, we still did a legal ID as "WKDI AM and FM, DeKalb" (at Northern Illinois University). When we had ABC Information newscasts at the top of the hour to run, we had the net in cue because our clocks were not always in sync with the network (and a back-timed instrumental playing--who does that nowadays other than NPR?). When the 10 second tone came over our cue speaker, we hit a carted ID. One morning, a new ID cart was put in and when previewing it, I discovered that whoever did the cart forgot to do the legal ID--he said something like "Progressive music for DeKalb on WKDI, 610 AM and 93.5 cable FM." That morning, when the 10 second tone hit, I hit the illegal ID, potted up the net, turned on my mike and hurriedly said over the time tone and ABC Information sounder "WKDIAM&FMDeKalb" so I wouldn't step on "News of the Hour, on the Hour, from American Information Radio..." I then made a note of this in the program

log and the ID cart later got changed. Totally unnecessary from a technical reason, but at least we were getting a taste of "real world radio," whether we wanted to or not.

3414. Re: 1160 670 Switch

Newsgroup: rec.radio.broadcasting
Date: 2000-08-04 00:00:00 UTC
From: Mark Jeffries <mjeffries@krw.com>
Message-ID: <3248971596@mail.krw.com>
Source record: 18120

>When did 670 become WSCR? I was listening at midnight on the 31st hoping
>to hear the change but at 10 minutes after midnight it was still WMAQ.

Here's more or less a simplified timeline of the last hours of WMAQ and the first hours of the Score on 670:

6 p.m. 7/31--Last live legal ID, 12-hour "When Radio Was..." marathon begins, interspersed with "WMAQ Memories" vignettes that had been airing all though the weekend, introduced by Bob Roberts (I believe) and beginning and ending with the NBC chimes and an old WMAQ legal ("This is WMAQ and WMAQ-FM, the National Broadcasting Company in Chicago"). Also, there were lots of promos inviting you to tune to WBBM for your news needs, including one by former WMAQ morning anchor (and now WBBM morning co-anchor) Pat Cassidy saying "we're going to have to get used to Traffic and Weather on the Eights instead of the Ones..."
6 a.m. 8/1--A six-hour loop of Score promos starts.
12 noon 8/1--The Score's first live show starts, a remote from the current Ditka's restaurant (IIRC) hosted by Mike North, the former hot dog stand owner turned all-purpose idiot for the Score. No turning back now.

From now until the 14th, the Score is on both 1160 and 670. Starting on the 15th, WXRT's AAA format will start simulcasting on 1160 (and I assume with interim WXRT-AM calls) until Mel Karmazin sells the station to somebody--and in case you didn't know, the station is being sold as a requirement of the CBS/Viacom merger (they had to sell one Chicago station).

Is the 670 transmitter in Bloomingdale even manned? I had the impression,
possibly erroneous, that it is remote controlled from the NBC tower, or
possibly somewhere else now? If they really feed an ID like this to only
the 670 transmitter, why not just feed it from the studio?

Message-ID: <2691525652@mail.krw.com>
Source record: 18122

>When I started at WMAQ, in 1971, it was a consistent top two with WGN. No one
>saw the quick rise of FM coming, and when it did, management paniced. WMAQ
>dropped personalities, (Heny Cooke, Pat Sheridan, Jim Hill, Jack Eigen), tried
>to re-cast itself with jocks from elsewhere (Jimmy P Stagg, Joel Sebastian,
>Clark Weber, Howard Miller-all pros, but mismatched), dropped sports (Black
>Hawks-Lloyd Pettit, White Sox-Bob Elson, Northwestern University football and
>Loyola basketball-Red Rush, and letting go a future President of ABC Sports,
>Dennis Swanson), cut back on news (Frank Barnako, Bill Lindsey).

Actually, Jim Hill turned out to be very durable--he stayed in his all-night slot through all of the format tweaks and changes of the early 70s and was only taken off when the station went country and went with Fred Sanders and an all-night truck-drivers show. He then went off permanently to WMAQ-TV, where he became the regular second-string and weekend weatherman and the last staff announcer at NBC Chicago before he retired about ten years or so ago (shortly after the move into the NBC Tower). A class professional until the end, and his morning weather reports were always welcome, even if his weather maps weren't flashy (he had problems running the computers). He was particularly missed when he was replaced with the annoyingly phony Roberta Gonzales.

>As the ratings
>dropped like a rock, the brain trust changed formats every year (MOR to talk to
>Country to News to Country To News), What was a powerful outlet became a joke.
>WGN, on the other hand, kept its personalities, (Wally Phillips, Roy Leonard.
>Floyd Brown (who moved to WGN after the first panic attack), Bob Collins/Carl
>Grayson (what a combo they were)), kept the sports (Cubs, Bears, college
>football), kept the farm news (Orrion Samuelson), kept the format, and is
>still dominant

Actually, WMAQ did pretty well with the country music format, making WJJD independently program its FM station (WJEZ) and thanks to PD Bob Pittman, making country music stations all over the country tighten up their playlists, add songs that traditionalists wouldn't consider country like Bee Gees and Neil Diamond songs and start big money contests ("WMAQ's Gonna Make Me Rich!"). However, when US99 came along in the early 80s most country fans went over to FM like most other music fans and 'MAQ had to do something different. Also, by then WJJD had gone adult standards and WJEZ had changed its calls to WJMK and flipped to oldies and the opinion had seemed to become (and remains today) that Chicago can only support one country station--and that's US99.

Oh, no... you win! I just wonder whether or not Randy Wood ever tried to convince Lawrence Welk to cover it, though.

"An' a-one, an' a-two, an'-a **** **** ****..."

At least Goulet had a sense of humor. Did that one get 1964 airplay in Dallas, too? ;)

Speaking of Bullet, I picked up a copy of Dot's reissue of Francis Craig's "Near You" at a country record shop in Nashville some years ago. It threw me for a loop until I remembered that Craig had been based in Music City.

Oh, man! I'd forgotten about all of those Richard Minor boots! On the one hand, you'd curse him for causing confusion and duping less knowledgeable collectors, for lousy sound and for having qual-o-nil pressing standards.

On the other hand, his were often the only copies that you could easily find to put on a typical grind-a-groove jukebox back then.

But on the one foot, that exit groove at the end of most of his boots didn't go in far enough to trip the reject mechanism on the ol' jukes or changers.

On the other foot, I like to try to convince others that that yellow vinyl, true stereo "Coral" 45 of Buddy Holly's "It Doesn't Matter Anymore" is authentic. Hee, hee.

Gotta go. I've run out of appendages.

Many - of those Minor (a bootlegger who went to the Federal slam for his nefarious activities & has since passed on) boots - original stampers & label paper, fake pressings - are showing up on Ebay. Now the pitch is, sure, they're bootlegs, but they're 25 year old bootlegs. Like, with enough age, anything becomes valuable.

AM
> and FM Patterson" Is that legal for a simulcast?

Technically the minimum ID for the current WMAQ/WSCR simulcast would be "670 WMAQ and 1160 WSCR Chicago". Often the frequencies are left out, but if you examine the rule closely, in this situation the frequencies are required as part of each station's ID. They could optionally put the frequencies after the call letters as well. Just as long as both the calls and freqs are followed by the COL. As for your WPAT example, the FCC seems to have always allowed that kind of ID, but the rules as written would seem to indicate that the proper way would be "WPAT and WPAT-FM Patterson"

There was one network (was it Talk Radio?) that recently gave the legals
as part of its service, I think, during the overnight shift. So the
legals went on for a minute or more as the network IDed all of its
affiliates online.

Of course, we have something up here that is somewhat unique - one
station with two official cities of license - WLLH in Lowell and
Lawrence, Massachusetts. It has a transmitter in Lowell (1000 w) and a
second in Lawrence (250 w) on the same 1400 khz frequency and identifies
as "WLLH Lowell and Lawrence". I realize many stations identify with
two cities (giving the COL first - example WXRV Haverhill Boston) but
this is a situation in which they MUST name both cities.

I believe KOKE is programmed thru an LMA arrangement by the same people who program non-commercial FM 91.5 in Giddings.

Although KOKE is on a commercial channel, I've only heard pleas for listener donations.

They give a Cedar Park PO Box as their mailing address.

Well, a few months ago, they definitely cut back on the
compression/processing ($@#&#@$*@%--they *had* one of the
few superbly processed stations around), so my suspicion was
that they may be either working on the xmtr or have (with
the FCC's blessing, of course) changed their nightime pattern.
In any event, I believe this is beyond propagation flux (I
remember conditions during the last solar peak, and this is
beyond that).

>>Technically the minimum ID for the current WMAQ/WSCR simulcast would be "670 WMAQ and 1160 WSCR Chicago". Often the frequencies are left out, but if you
examine the rule closely, in this situation the frequencies are required as part of each station's ID. They could optionally put the frequencies after the call letters as well. Just as long as both the calls and freqs are followed by the COL.<<

Wrong. The frequency is not a required part of a legal ID, even for a simulcast. It may be used before or after the ID, or inserted between the call sign and COL, but it is NOT required. See 47 CFR § 73.1201.

3432. Re: A question about CALL LETTERS....

Newsgroup: rec.radio.broadcasting
Date: 2000-08-05 00:00:00 UTC
From: richw@webcom.com
Message-ID: <20000805142339.19202.richw@wyattearp.stanford.edu>
Source record: 18138

Various assorted comments about Canadian call letters (I lived in Ontario from 1993 to 1997):

Calls starting with "CB" are officially assigned to Chile, not Canada. In 1995, I wrote Industry Canada (the government agency responsible for radio and TV) asking about the CBC's use of "CB..." calls, and I was told the following:

(1) The CBC asked for "CB..." call letters in 1937. The request was directed to (and approved by) Canadian authorities, not Chile or any international organization.

(2) The "General Radiocommunication Regulations of Madrid, 1932" allow any call letters to be used (despite international assignments and without having to get special permission), provided care is taken to avoid confusion with stations in the country to which the call letter block in question is officially assigned.

(3) The CBC proposed to use "CB..." calls for standard broadcast bands only -- not for shortwave stations whose signals could reach Chile -- so it was decided that no confusion would result.

(4) The Industry Canada representative who replied to my questions did not know whether Chile had ever either formally agreed or objected to Canada's use of calls starting with "CB".

In addition to "CB..." calls, Canada officially owns the following prefixes: CF-CK, CY, CZ, VA-VG, VO, VX, VY, and XJ-XO. Of these, CF and CH-CK (but not CG) are used for broadcast stations. Aircraft use CG (or sometimes CF); even though the calls on Canadian aircraft are normally written with a hyphen after the C (e.g., C-GXYZ), the first two letters (not just the C) are what make the call officially Canadian.

Amateur (ham) radio call signs in Canada start with VE, VA, VO, or VY. "VA..." ham calls were first introduced in 1993 when Ontario started running out of "VE3" calls. "VO" belonged to Newfoundland and Labrador before this region joined Canada in 1949; three AM broadcast stations (VOAR, VOCM, and VOWR) continue to use their old calls.

As for the use of call letters by Canadian stations on the air, my observation (while living in Ontario) was that this was sporadic. Some radio and TV stations used their calls all the time; others used only nicknames and rarely (if ever) did an "official" ID. I had heard that Canadian stations were required to state their call letters every hour on the hour (similar to the US rule), but if this was in fact a rule, it was scantily enforced and widely ignored.

The most novel Canadian station ID I ever heard was from CFLZ in the Niagara Falls area (91.9 FM, though I understand they moved to 105.1 a year or so ago). CFLZ broadcast a non-stop spiel of tourist info and "factoids" -- punctuated every few minutes with its call letters in both American ("C-F-L-Zee") and Canadian ("C-F-L-Zed") fashion.

There is no requirement for the frequency in a legal ID. The two minimum requirements are Calls and City. The name of the licensee can be inserted in the middle. And anything can be said at the end, including other cities and planets. Frequency is not a requirement, but can be added, just like the licensee.

Your example of WPAT would be, at minimum, "WPAT, WPAT-FM, Patterson." The "and" is not required.

I'd guess that "WSCR, WMAQ, Chicago" would cut it although a stickler might require "WMAQ Chicago... WSCR Chicago."

Incidentally, I was Chief Engineer for an AM in
Weirton, WV in 1977. Not very far from Wheeling, WV.

We were just a 1 KW AM on 1430 Khz and did not even
have a decent signal in the city of license.

Glad to hear WWVA is on track. That is a "legacy" AM
if there ever was one. I put it in the same class as
WSM in Nashville.

Cordially,

Meyer Gottesman

Since I'm out of range, I can't tell you what they are doing, but I would suspect that they are doing exactly as described above, but that would not be legal in this case. To make sure each station is identified distinctly, this is a case where the freqs would be required. See 47cfr 73.1201 (c) (3) (ii)

I used to work for a two FM simulcast that has separate feeds for spots and IDs and each station IDs itself only with just calls and col, while the rest of the programming is a full simulcast. However, there are ocassions when the IDs are simulcast and the freqs are added in that case to comply with the above sub section of the rule.

Wrong again. That refers to a case where one station is operated as a satellite of another. Two stations merely simulcasting does not necessarily meet this requirement.

I think that the definition of "Satellite Station" applies in this case. A
"'Satellite Station' Rebroadcasts the same programming as another station
simultaneously". Exactly the definition of what is happening here.

(3) (ii) refers to satellite stations. The Chicago situation is a local simulcast of two facilities licensed to the same market. I don't think the satellite station rule applies here. In any case, I've not seen this enforced in recent memory if ever! I did not look up what the FCC definition of satellite station is, but I assume it is some kind of 100% simulcast repeater to extend coverage.

In a bunch of markets we see Class A FM stations creating rings or overlapping coverage areas; none of the ones I've heard have put the dial position in the ID, even if they are different frequencies... and this has been going on for the better part of a decade in some markets.

I searched the AM rules for a definition of "Satellite Station" and came up
blank. Where id you find the definition in quotes? This satellite thing is
different from a simulcast, obviously, so the issue is whether WCSR and WMAQ
are in an AM/AM simulcast or one is satellite to the other. As they share
the same COL, it is hard to envision one being a satellite to the other.

No, that's the commonly accepted definition of "simulcast." Since there is no definition of "satellite station" anywhere in Part 73, yet there are multiple references to the term "simultaneous broadcast," apparently you just made up your definition.

[I originally posted this on Aug.2, but the moderator's server switch seems
to have eaten it.]

How the heck did CBS get 670? Last time I was paying any attention, it was
NBC o-o.

Is Chicago without an NBC am channel now? Is WLS still affiliated with ABC?

That explains why a search on my Pike and Fisher could not come up with "satellite" in a definition suitable for this context. Yet there is the reference in the ID rule that refers to aural services with satellite operations. The only satellites I remember were TV, like the L. L. "Dub" Richardson ones in W. Texas and the KELO family in the Dakotas. Some even had "satellite" studios.

The original KOKE went on the air in the 1950's on 1370, licensed to Westlake Hills community.

The current KOKE has no web site. And I don't listen to it.

NBC got out of radio a decade ago. They sold all their stations. The
radio network was taken over by Mutual, which has since died itself.

660 New York is on the second or third owner since NBC sold it. 980
Washington is soon to have its third owner since NBC sold, and so on.

3451. FCC & Legal IDs

Newsgroup: rec.radio.broadcasting
Date: 2000-08-05 00:00:00 UTC
From: robins@ix.netcom.com
Message-ID: <398c99a7.2263678@smtp.ix.netcom.com>
Source record: 18157

Hi...

This post is inspired by my having heard a few too many people do station IDs over a live broadcast, especially a live music broadcast, instead of waiting for a natural break to stick in that ID.

Fortunately for all of us, all the FCC rules relating to radio broadcasting are available online to check out:
http://www.fcc.gov/mmb/asd/bickel/amfmrule.html

The Station Identification rule is # 73.1201 (part of Title 47)

Here's the actual regulation:

[Code of Federal Regulations]
[Title 47, Volume 4, Parts 70 to 79]
[Revised as of October 1, 1999]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR73.1201]

[Page 267]

TITLE 47--TELECOMMUNICATION

PART 73--RADIO BROADCAST SERVICES--Table of Contents

Subpart H--Rules Applicable to All Broadcast Stations

Sec. 73.1201 Station identification.

(a) When regularly required. Broadcast station identification announcements shall be made: (1) At the beginning and ending of each time of operation, and (2) hourly, as close to the hour as feasible, at a natural break in program offerings. Television broadcast stations may make these announcements visually or aurally.
(b) Content. (1) Official station identification shall consist of the station's call letters immediately followed by the community or communities specified in its license as the station's location: Provided, That the name of the licensee or the station's frequency or channel number, or both, as stated on the station's license may be inserted between the call letters and station location. No other insertion is permissible.
(2) A station may include in its official station identification the name of any additional community or communities, but the community to which the station is licensed must be named first.
(c) Channel--(1) General. Except as otherwise provided in this paragraph, in making the identification announcement the call letters

shall be given only on the channel identified thereby.
(2) Simultaneous AM (535-1605 kHz) and AM (1605-1705 kHz broadcasts. If the same licensee operates an AM broadcast station in the 535-1605 kHz band and an AM broadcast station in the 1605-1705 kHz band with both stations licensed to the same community and simultaneously broadcasts the same programs over the facilities of both such stations, station identification announcements may be made jointly for both stations for periods of such simultaneous operations.
(3) Satellite operation. When programming of a broadcast station is rebroadcast simultaneously over the facilities of a satellite station, the originating station may make identification announcements for the satellite station for periods of such simultaneous operation.
(i) In the case of a television broadcast station, such announcements, in addition to the information required by paragraph (b)(1) of this section, shall include the number of the channel on which each station is operating.
(ii) In the case of aural broadcast stations, such announcements, in addition to the information required by paragraph (b)(1) of this section, shall include the frequency on which each station is operating.
(d) Subscription television stations (STV). The requirements for official station identification applicable to TV stations will apply to Subscription TV stations except, during STV-encoded programming such station identification is not required. However, a station identification announcement will be made immediately prior to and following the encoded Subscription TV program period.

[34 FR 19762, Dec. 17, 1969, as amended at 37 FR 23726, Nov. 8, 1972; 39 FR 6707, Feb. 22, 1974; 39 FR 9442, Mar. 11, 1974; 41 FR 29394, July 16, 1976; 47 FR 3791, Jan. 27, 1982; 48 FR 51308, Nov. 8, 1983; 56 FR 64872, Dec. 12, 1991]

Note the part in section (a)(2) ...

(2) hourly, as close to the hour as feasible, at a natural break in program offerings. Television broadcast stations may make these announcements visually or aurally.

AS CLOSE TO THE HOUR AS FEASIBLE, AT A NATURAL BREAK IN THE PROGRAM OFFERINGS.

This means it's OK to wait until the song is over before interrupting to drop in the legal ID.

Too often I hear people fade down a song, talk over the song or otherwise ruin the performance being broadcast in order to satisfy the "hourly" part of the regulation without understanding the rest of it: "as close to the hour as feasible, at a natural break in program offerings."

I'm sorry to belabor this, but I hope on-air people will realise they are allowed to wait until the song they're playing (or especially the song in progress during a live band performance!) is fully over before sticking in that ID.

Thanks for reading this...

It's hard for me to believe that the next president of the United States will be George W. Bush or Al Gore. Both remind me of Hollywood movies that have been focus-grouped to death: they push all the appropriate buttons, but have zero original vision. Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could give Al & George a good run for their money. At 65, Nader isn't running as fast as he used to, and the Green Party doesn't exactly have its platform figured out, but I think they have what it takes to inject a dose of radical democracy into the race. Unlike the two Tweedles, Nader is real, he stands for decency and common sense and he still commands a lot of respect in progressive and activist circles. And hidden behind the rainbow coalition of lefties, eco-feminists and crazies, the Green Party does have some great ideas. It's the only party that stands for the Tobin Tax, true cost markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine

sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting with how we live our lives, taking small, unilateral steps toward peace in everything we do. Green politics requires us to be both tender and subversive. Affirming tenderness as a political value is already subversive. In Green politics, we practice tenderness in relations with others; in caring for ideas, art, language, and culture; and in cherishing and protecting the Earth. To think Green is to build solidarity with those working for social justice and human rights everywhere, not bound by ideologies."

-Petra Kelly

No argument here. It has not been enforced. But I interpret the rule as
being effective in this case. I do know that I have a former employer that
believed it was in effect for a similar situation and made sure we included
the freq accordingly.

Think about it this way.

The purpose of the ID is to identify the transmitter being received at the time the ID is given. If someone in the Chicago area today is tuned to 1160, and they here an ID that goes "WMAQ and WSCR Chicago", how are they to know which station they are actually listening to. Are they listening to WMAQ or WSCR. The purpose of the freq being included is to let the listener know which of the two stations he/she is listening too. A reasonable assumtion can be made that the listener knows approximately if not exactly what freq they are tuned to. 2+2=4. If you read the ID rule, it says clearly at first that the IDs can only be broadcast on the transmitter to which they are assigned. Then the exceptions are listed. Among the exceptions are various ways that IDs can be broadcast on multiple stations, but certain extras are required to make sure that each station is identified individually.

Unless the individual stations broke away from the common feed for
individual ID's, this would have no useful purpose. No matter how well you
describe frequencies on a multi-station simulcast ID, there is no way to
know which one it is from listening alone. Oh, people have been interpreting
the ID rule liberally for decades. One of the early tricks was to have a
station in, let's say, Pomona, and call the Licensee "Los Angeles Radio" so
the ID could be "KXYZ Los Angeles Radio, Pomona." Seems like an LA station,
right?

True story:

Close to 50 years ago the folks at the National Bureau of Standards
standard frequency station WWV started getting complaints about a strong
off-frequency spurious. Try as they might, they couldn't find a signal
on the spurious frequency in their transmitter room.

Eventually it was discovered that a US Air Force station on the Azores
was using audio from a receiver tuned to WWV to test-modulate their
transmitting station!

There was the short time after the FCC busted Gordon McLendon for "KABL
Oakland, In the Air Everywhere in San Francisco." During that period the ID
rules were watched pretty close.

One item that is particularly missing from the rule today, is one which
required an FM station to be Identified as FM during an AM/FM simulcast ID,
even if the FM had different calls or had no FM suffix officially assigned.
Such as "KXYX and KXYZ-FM Timbuktoo." "KXYX and KXYZ Timbuktoo" would not
be permissible. But that specific requirement appears to have been deleted.

I don't have any "Official" definition of a satellite station, but in the
context of the ID rules, I beleive it applies to any form of simulcast.

As I posted earlier, I used to work for a dual FM operation, two freqs, but
the IDs were usually fed to each xmtr separately. When that was the case,
the IDs were only calls and COL. There were occassions when the IDs would
be simulcast and our management agreed with my interpretation of the rule
and we included the freqs.

I used to compete with an AM/FM combo, common calls, but different COLs,
full time simulcast. They IDd as "Calls FM and AM, FM COL 'And' AM COL". I
don't think that was legal either, but they got away with it.

One of the early tricks was to have a station in, let's say, Pomona, and call the Licensee "Los Angeles Radio" so the ID could be "KXYZ Los Angeles Radio, Pomona." Seems like an LA station, right?
>>

Another trick was to have the studios and registered offices ofd the station at the transmitter site, and the transmitter sited within the major metro, not the suburb to which the station was actually licensed.

Example: Rollins' KDAY, Santa Monica, in its 50 kW DA-2 U incarnation.

Sure, the station ID said Santa Monica, but every other mention of the station included its business address, which was in the Echo Park section of Los Angeles.

Of course, the station historically programmed for Black listeners, as most of Rollins' stations did at that time, and the day pattern from Echo Park covered the Black community quite well (and better than the COL). The night pattern covered the COL better than the Black community, but then 50 kW is still 50 kW.

Best possible coverage of the COL *and* the primary audience in the Black community, day *and* night, would have required two sites approximately twenty-five miles apart and ten total towers.

The single, compromise site required six total towers.

All of the legitimate Oldies 45 pressings that I ever encountered were of the polystyrene variety. The booted ones fit the pattern of many of Richard Minor's others, especially the raised lettering in the label that I've never quite figured out... it looks like it says "MUSICO" backwards.

I have one of his "Twist And Shout" pressings - Tollie 9001, yellow label with the logo in the black box. The printing quality is quite good, although it's not that difficult to emulate (unlike the "stars" Imperial black label he's also booted.)

But the groove pattern is instantly recognizable as one of his.

And then there's that "Wall Of Charcoal" sound quality...

The key is whether the term "natural break" is being satisfied. If a station ha a no-talk music sweep, theoretically there is no natural break. I'm pretty sure that this is a stretch of the rule, which was intended to make it easier for stations that have sports, interview shows and such that don't have natural breaks within a minute or two of or after the top of the hour. Still, many stations do position the ID in the stopset ahead of the hour.

I recall being written up with a Notice of Apparent Violation by the FCC for a station in Puerto Rico in about 1971. It was Summer, and the radio clocks that supposedly synchronized with WWV lost the signal for a day or so due to propagation and ran slow. Our ID was outside the window existent at the time; the Commission was satisfied with the cause and relieved us of the violation.

Here in L.A. KRTH has for the last couple of years been "burying the ID in the stopset and it has ranged anywhere from :47 to :57. At the same time they've been running a sweeper similar to their former ID at the top of the hour, that was concluding with a moniker ID jingle, "K-Earth 101 Los Angeles." They have recently been doing the same ID that had been in the stopset as the first element of the top of the hour sweeper, and the "Los Angeles" has been dropped from the jingle at the end. I'm wondering if it's a matter of consience or if the FCC maybe stepped in.

I also just noticed in the FCC databases, that after KRTH-AM became KKHJ, that KRTH-FM was never officially changed back to KRTH. All FCC listings show the current assigned call as KRTH-FM. Based on that, they haven't done a legal ID in over 10 years!

FWIW, the address is Alvarado and Effie Streets in L.A.,
just offof the Hollywood Freeway.

The towers are painted, but not lighted.

And they're not "short", either, but are significantly
taller than is required for minimum Class B efficiency.

A rimshotter I know of did that - identified four minutes to the top of
the hour with the legal id and then played a jingle - identifying
themselves as being part of the "big city". I don't know if the FCC
stepped in, but they halted the practice.

Thank goodness they finally got that site on the air when they did. The CP was at least 10 years old when they finally built it. The lease was up on the old site and they had to move fast. But boy what a junker of a xmtr they had on that old site, in the Palms area of West L.A. about 5 miles or so east of downtown Santa Monica. That thing was throwing spurs all over the place, and they were as powerful as the mian signal on 1580. There were at least two I could pick up in the High Desert area about 80 miles away and they were just as loud as the 1580.

They also got around the old COL "Main Studio" rule for a long time too. Last time I know of when they had a studio in Santa Monica was in the 50's. It wasn't at the West L.A. xmtr site either. They moved into the current xmtr site while the towers were being erected. It was quite a big deal when they finally went full time in 1968. They were doing a really good top-40 format at the time. KHJ was still too much for them to handle, and they eventually tried AM AOR before the "R&B Soul" format they kept right up until they were finally sold and first tried business news and resurected the calls KBLA.

3470. KDAY

Newsgroup: rec.radio.broadcasting
Date: 2000-08-06 00:00:00 UTC
From: peterh5322@aol.com
Message-ID: <20000806233537.09390.00000010@ng-cl1.aol.com>
Source record: 18176

"Gene" gene7752@hotmail.com remarked ...

>>
Thank goodness they finally got that site on the air when they did. The CP was at least 10 years old when they finally built it. The lease was up on the old site and they had to move fast.
>>

That's not the way I remember it.

As I recall in conversations with Rollins' engineering executives from Wilington, DE, there were years of negotiations with the Canadians over U.S. use of 1580 in Santa Monica, even though the terms of the U.S.-Canada broadcast agreeent was clearly met as KDAY was more than 650 miles from any point on the U.S.-Canadian border.

Likely, the problem was with CBC's "non-conforming" operation of CBU, Chicoutimi, Quebec, and CBC wanted to implement 50 kW DA-1 operation, or at least have that operation duly "notified" before agreing to unlimited time operation by KDAY.

(CBU, being a Class I-A was supposed to be operating with 50 kW U, and it was being operated with only 10 kW U, ND1).

After an option on the Alvarado and Effie site was obtained, an application for a five-tower DA-2 operation was submitted, but it was returned by the FCC.

Subsequenty, a new application specifying six total towers, with four day and six night, was submitted, and this application was eventually granted, just in time.

Based upon the above, " [the] CP was at least 10 years old when they finally built it" appears to be a historically inaccurate statement.

>>
But boy what a junker of a xmtr they had on that old site, in the Palms area of West L.A. about 5 miles or so east of downtown Santa Monica.
>>

SOP for an RCA "Amplifuzz".

The auxiliary at the WLA site was a Gates 10K plate-modulated rig, and it became the auxiliary at Alvarado and Effie.

The Amplifuzz did not make it to Avlarado and Effie, but yet another junker, a Gates VP-50 was installed as the main Tx.

This rig used "vapor phase" cooling, which was probably more suited to cooling klystrons than it was being used to cool tetrodes.

>>
That thing was throwing spurs all over the place, and they were as powerful as the main signal on 1580. There were at least two I could pick up in the High Desert area about 80 miles away and they were just as loud as the 1580.
>>

Yup ... got into all the PA systems in the WLA area, too.

I can remember my younger brother's HS graduation at University HS, with an all-White graduating class and the PA system being overwhelmed by a Black announcer and associated R&B music, courtesy of KDAY.

"Uni High" is completely different, demographically, now.

>>
They also got around the old COL "Main Studio" rule for a long time too. Last time I know of when they had a studio in Santa Monica was in the 50's.
>>

The Santa Monica studio only lasted a few years and was constructed in during the transition from the Hollywood studio (with all music originating from the Tx site in WLA) to the LA studio/Tx/offices.

So, that would be in Santa Monica from perhaps 1966 to 1968, more or less.

>>
It wasn't at the West L.A. xmtr site either.
>>

Technically, most programming was originated from the WLA Tx site, and the engineer kept a log to prove it.

The on-air talent was in Hollywood, while all recorded music was played from the Tx site in WLA.

KDAY easily met the rules as most programming was from the Tx site, which certainly qualified as a "main studio".

>>
They moved into the current xmtr site while the towers were being erected.
>>

The intermediate studio was in Santa Monica. On third street, as I recall. I was present for its construction.

>>
It was quite a big deal when they finally went full time in 1968.
>>

Yup ... and it was a bigger deal when the #4 tower decided to bend over one day in the Spring of 1969.

I could easily see the tower erection crews trying to fix that problem from my 11th floor window office on Bunker Hill.

>>
They were doing a really good top-40 format at the time. KHJ was still too much for them to handle ...
>>

Carson Schreiber, a former acquaintance of mine, was PD of KDAY at that time.

>>
... and they eventually tried AM AOR before the "R&B Soul" format ...
>>

So, your're saying they went from the Rollins' -approved R&B format to Top 40 (under Schreiber) to AOR back to R&B?

Strange.

I knew Schreiber didn't last long as PD, but I didn't know why.

>>
... they kept right up until they were finally sold and first tried business news and resurected the calls KBLA.
>>

Rollins' interests in Orkin Exterminators and in truck leases were undoubtedly more profitable for the old man, O. Wayne Rollins.

Well, I remember seeing a CP listed in the Broadcasting Yearbook from the
very early 60s describing what became their unlimited time operation. 10
years was a rounded guess.

>
> SOP for an RCA "Amplifuzz".
>

But you could usually tweak an "Ampliphase" so it didn't do that anymore. They had those problems consistently for years!

> The Amplifuzz did not make it to Avlarado and Effie, but yet another junker, a
> Gates VP-50 was installed as the main Tx.
>

All I can say for sure about the Gates main on Alvarado was that it cleaned up the spurs. Only place on the dial I picked up KDAY after the move was on 1580. What a novel idea

>
> Yup ... got into all the PA systems in the WLA area, too.
>
AND local plumbing, refrigerator food racks, and anything else that just happened to resonate at the right freq.

> I can remember my younger brother's HS graduation at University HS,

All they had to do was wait until local sunset so KDAY was off the air. But yeah, Uni was in a BAD location for KDAY's nasty interference problems.

>

>
> So, that would be in Santa Monica from perhaps 1966 to 1968, more or less.
>

I could never find any evidence of a Santa Monica studio and I also never saw any signs of life at the WLA xmtr site either. I did stand in the hallway of a small office building in Hollywood around 1966 and listen to a jock do a talk up of "Uptight" by Stevie Wonder on KDAY, complete with monitor speakers muting when he opened his mike. I couldn't say for sure if the record was originating in the same room or not

> Carson Schreiber, a former acquaintance of mine, was PD of KDAY at that time.
>

Shortly after my experience in the hallway, they did try several variations of top-40, eventually doing a very mainstream top-40 that started just a few months before the full time operation. Carson was replaced by Bob Wilson, (later the founder of "Radio & Records") and he remained through most of the AOR period, then left to start R&R.

>
> So, your're saying they went from the Rollins' -approved R&B format to Top
40
> (under Schreiber) to AOR back to R&B?
>

Basically, yes! But Bob Wilson was the PD that really made the top-40
format sizzle as long as it lasted.

3472. Another legal ID question

Newsgroup: rec.radio.broadcasting
Date: 2000-08-07 00:00:00 UTC
From: Danny <danny@dreamscape.com>
Message-ID: <Pine.BSI.4.21.0008070047440.27486-100000@nova.dreamscape.com>
Source record: 18178

All this discussion about legal IDs just made me wonder about a situation we have currently.

Someone is airing a live show on another NCE station, unrelated to ours, recording it, and then we re-play it on our NCE station. She does the legal IDs for both stations at the top of each hour. But now I'm wondering, is it legal to do a double ID for two stations that are owned by completely different entities??

~ Danny ~

****
SPOKENWORLD NEWS
****
- It's Nationals time and you're going to hear it on Spokenworld.com. Four days of live slam from AS220 in Providence, RI! Here's the schedule as it stands now for the teams you'll hear live!

WEDNESDAY AUGUST 9TH
8:00-9:30pm Eastern Time Slot
1 Ann Arbor, MI
2 Roanoke, VA
3 Hot Springs, AR
4 St. Louis, MO
9:30-11:00pm Eastern Time Slot
1 New Jersey
2 NYC-Nuyorican
3 Memphis, TN
4 Mesa, AZ

THURSDAY AUGUST 10TH
8:00-9:30pm Eastern Time Slot
1 Minneapolis, MN
2 Albuquerque, NM
3 West Palm Beach, FL
4 LA CA
9:30-11:00pm Eastern Time Slot
1 Cleveland, OH
2 Worcester, MA
3 Chicago-Green Mill
4 San Jose, CA

FRIDAY AUGUST 11TH (All times Eastern)

What: TEAM SEMI-FINALS COMPETITIONS
When: Bout 1: 8:00-9:30pm
Bout 2: 9:30-11:00pm

SATURDAY AUGUST 12TH (All Times Eastern)
What: FINALS
When: 8:00-11:00pm

Hear them all from one link:

I could never find any evidence of a Santa Monica studio ...
>>

It was on 3rd street just above Colorado from about 1966 to 1968.

The same engineer from Rolling' Wilmington, Delaware engineering group who installed the Gates VP-50 at Alvarado and Effie installed the interim Santa Monica studio.

>>
... and I also never saw any signs of life at the WLA xmtr site either.
>>

As all the '45s and most spots were originated from the WLA Tx site, a full board was there, right after you entered the Tx building.

When you entered the Tx building, the board was right in front of you, an Ampex 351 was to the immediate right as were the turntables, the Gates 10K was to the extreme left and the RCA Amplifuzz was to the extreme right.

BTW, what is Carson doing now?

Got it - it's official from www.afrts.osd.mil/afnonradio/html/satnet.htm

On July 31, 2000 the Armed Forces Satellite Transmitted Radio Service (AFSTRS) went off the International Maritime Satellite (INMARSAT) system. For the past year and a half, Navy HF service from Key West Naval Air Station (NAS), Florida, and Roosevelt Roads NAS, Puerto Rico, have been transmitting the AFSTRS service, identical service land based outlets know as the "Voice Line". This has served ships in the Caribbean Sea and the waters around South America quite well since the AFSTRS service was terminated on the INMARSAT Atlantic West satellite in 1998. We are negotiating for cooperative use of the transmitters and assignment of frequencies so the Navy HF service will also be transmitted from U.S. Navy facilities in Guam, Diego Garcia, Sicily, Iceland, and Maine. With over 100 U.S. Navy ships now equipped for Direct to Sailor (DTS) satellite television and radio service it is no longer cost-effective to continue this service on INMARSAT. However, for those ships still to have DTS equipment installed during the next year and a half and for those few Navy ships that may never have DTS equipment the HF service will help fill the gap.

Current Short-Wave High Frequencies

Keep checking this web page for the posting of new frequencies and transmitters when they become available. Location Band Daytime Nightime

Key West, FL Upper Sideband 6458.5 kHz 12689.5 kHz
RR, Puerto Rico Upper Sideband 6458.5 kHz 12689.5 kHz

3482. Coaxial switch

Newsgroup: rec.radio.broadcasting
Date: 2000-08-07 00:00:00 UTC
From: majewicz@adelphia.net
Message-ID: <398eb1fa.1699251184@empirent6>
Source record: 18188

Does anyone know of a manufacturer that makes a low-power (200 watts or so) motorized coaxial switch? I'm looking specifically for a 4 port switch with N connectors (baseball switch). It is to put either of two exciters into either of two transmitters. You know, if exciter one is switched to transmitter one, exciter two will be in transmitter two. If exciter one is switched to transmitter two, exciter two will then be in transmitter one. No DPDT relays, please.

We already explored the usual companies. The smallest we have found has 7/8" connectors and of course handles high power. Very much overkill for our application.

Any suggestions would be appreciated.

Thanks,

Dennis Majewicz

I had a client buy one of these last year from Fair Radio Sales, surplus store in Lima, Ohio. They have a web presence.

IIRC it was not a motorized switch but a standard relay with transfer contacts like a motorized switch (not SPDT or DPDT). My suggestion was to use it in conjunction with a magnetically latching relay in order to preserve position in the event of a power failure. It also had interlock contacts. He was going to use it in conjunction with a motorized switch to switch the exciter straight to the antenna, bypassing the amp in the event of utility power failure. The generator at the site wasn't large enough hold the amp.

I once worked at a commercial station which carried a weekly simulcast
of a classical music program from a NCE college station. We ID'd
them both on both stations. The low-powered NCE station got exposure
on a big signal, and the commercial station got the program without
having to produce it.

Hoo boy. That sounds like something I read about in this group some time ago at WNEW in New York. Before the ill-fated "all-girl" format on the FM, when the 50% simulcast rule came into effect, supposedly the 'NEW jocks were going back and forth between the AM and FM studios regularly and were on both stations doing two separate shows--with the newscast at the top of the hour and the jock's opening coming out of the newscast simulcast, although the two stations were playing separate songs. Anybody else remember reading this?

I remember Dan Akroyd doing a comedy skit on Saturday Night Live about
that, where he was doing the AM and FM side at the same time - and
switching his mode from a high-powered top 40 AM jock to a mellow FM
jock selling health food.

3489. college break...start a radio station?

Newsgroup: rec.radio.broadcasting
Date: 2000-08-09 00:00:00 UTC
From: Tirath Ramdas <tirath@pl.jaring.my>
Message-ID: <8lkcm9omq1@news5.jaring.my>
Source record: 18051

Hi!
I'm a university student and I've got a long 4 month break coming up in November. I was goofing around with a friend of mine the other day when the issue of how we were gonna spend our break, and then a crazy idea hit me: start a radio station!

I was thinkin maybe a small radio station transmiting only within a small district (where I live), an area about 25 square kilometres wide. Also, we will only transmit for the duration of our break; i.e. 4 months. I realise that the situation would vary according to location, but generally speaking, what can I expect to encounter regarding the followig issues:

1)Licensing: Of course, for this issue I'd be better off talking to the local authorities, but generally speaking how easy are these licenses to get a hold of? Are they often issued for such a short duration? And how are they normally priced: according to range of transmission?

2)Equipment: Let's see.... I'd need a transmitter (preferably PLL) , amps, an antenna, decent power supply, etc.... excluding the strictly audio equipment (such as mixers and mic preamps and CD players) how much can I expect to pay for the transmission related equipment? From what little I've read on web pages, it seems like I can be up and running for < $1000. Any truth in this?

3)Music: What do I have to do to play commercial music? I'm guessing I have to talk to the record companies, but what should I expect? Do they normally charge according to the number of times I play a particular track? Or is there some other way? Does it vary from company to company? If I want to broadcast commercial music, I should go talk to the record companies I presume?

Is this even a good idea? I mean, I don't expect to make a killing, but I'd like a decent return on investment... after all, this seems like it's gonna be hard work, and although I don't think It'll be too difficult to get local businesses to buy advertising space, I sure as hell don't wanna end up LOSING money. I'd appreciate any info I can get. I'd also appreciate any recomended sites and books that I should check out. Has anyone actually tried something like this? If there has been any particularly succesful short-term short-range radio station, please let me know cos it'll look good on the feasibility report.

I'm really quite serious about this; I'm ready for all the hard work and all the pressure. Just point me in the right direction. Thanks!

best regards,
tirath ramdas

Source record: 18052

Hi!
I have a few questions regading college radio stations. The main thing is, who tunes in? Is it just people who live in the vicinity (i.e. in hostels)? How else could people possibly tune in? Or are there areas of the campus where transmission is broadcast over loudspeakers? What sort of content is typical for these stations? Also, I've heard that recor companies have to pay to get their stuff on air. Am I right to assume, therefore, that they should tolerate me broadcasting their stuff unlicensed?

Are there any websites or newsgroups or webrings or mailing lists dedicated to college radio stations? I'd really appreciate any pointers, advice, ideas.... anything! Thanks everyone!

best regards,
Tirath Ramdas

>guess they were also trying to avoid the no simulcast rule.

I can recall another station doing something similar, back in the late
70s or early 80s. WKLO in Louisville, Top 40 at the time (although
calls might have been changed by then) ran identical music programming
on the AM side some 5 to 7 minutes after the FM side. The FM was
"live," the AM was automated I think. I recall reading about it in
the trades at the time. The idea, as the PD explained it, was to give
the listener the opportunity to hear a song they liked five minutes
later, guaranteed. Do radio people come up with some wild ideas or
what? I only read about them doing this. I never actually heard it.
Don't know how long it lasted. ---John

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Hello, yourself.

Have you ever heard of "Administrative Law?" The original assignments, using call letter prefix' assigned by international convention, were granted as an administrative function of the government. In fact, the usage of call letters in the US is based on treaty compliance and as such is just as much a part of the law as the later radio act that codified regulation.

Otherwise, how did the several thousand stations licensed prior to 1934 get authorization and call letters? They didn't just make 'em up...

All the other evening hosts are on bigger and better stations. KIEV's night signal is limited if not defective and the whole station is an also-ran.

Oh, and most English language talk stations in LA do poorly 25-54. It is a function of the ethnicity of the city (60% ethnic and young) and the nature of AM talk radio.

Despite 2 1/2 years in syndication and a significant promotional expenditure by the company behind it Michael Medved's show seems to be going nowhere.

New figures posted by RadioDigest.com show that in a key market, Los Angeles, Medved ranks 25th out of 27 talk show hosts in weekly listenership. The most amazing detail to emerge is that 80-something George Putnam, also heard on KIEV, is beating Medved among listeners 25-54!

This is despite the fact that Medved occupies a key daytime slot. Almost every evening host in LA has a bigger audience.

In Seattle Medved often claims to be number one. This is only true when the entire 10AM-3PM ratings period is counted. That's because Rush Limbaugh accounts for the first two hours of the daypart! Remove Rush's numbers and Medved drops like a rock.

Most of Medved's other affiliates are tiny stations owned and operated by Salem, his syndicator. Ratings for many of these are minimal if they show up in the ratings book at all. In many cases they are located in distant suburbs of major cities or in very rural areas.

I can't remember the stations, but in San Antonio (sometime around 1983/1984) an AM station and an FM station were "almost" simulcast. (the phrase "Class-FM" jumps into my mind) The stations carried identical programming, but one was time-delayed by about 30-seconds. Commercials, songs, everything. It one of was the strangest thing I've ever heard -- guess they were also trying to avoid the no simulcast rule.
I'm not sure how long they did it since I only heard it on a "road trip" to the Alamo City from Corpus Christi. Both stations faded well before getting back home to Corpus... which would leave out
KONO (which had just dumped oldies),
KTSA (Still top-40 at the time; long live Ricky Ware - still there and doing a talk show!),
WOAI (news-talk as always),
KKYK(not yet country oldies) -- all am's that could be easily heard throughout South Texas.

What's your motivation for posting this? Are you a competitor? Do you
have some axe to grind?

You're assuming the only purpose for a radio show is to be #1. Have
looked at the sales figures for the show? Do you know the motivation
behind Salem's support of the show?

The people who determine the success of a show is the owner of the
show. I know many low-rated shows that are cash cows. I also know many
highly rated shows that can't sell worth beans.

Learn a little about the economics of radio before making foolish
assumptions like those in your post.

Also, identify your connection with the show or with a competitor so
you have some credibility.

I'm not that certain that the ITU-R requires call letters any more for
domestic stations. Australia, for example, uses call signs for its domestic
broadcasters that don't use the prefixes assigned to that country, and I've
never heard of anyone raising hell about it. (Not to mention that very few
countries, aside from the U.S., even require broadcast stations to use call
signs on the air!)

Source record: 18063

John <jsimmers@mindspring.com> wrote:

"I can recall another station doing something similar, back in the late 70s or early 80s. WKLO in Louisville, Top 40 at the time (although calls might have been changed by then) ran identical music programming on the AM side some 5 to 7 minutes after the FM side. The FM was "live," the AM was automated I think."

Both were live, with different DJs. The call was WKJJ for both stations (though the WKLO call was changed a few months into the format), and the FM station (99.7) referred to itself as "KJ-100." Since the FCC simply limited simulcasting to a maximum number of hours per week -- never banning it entirely -- WKJJ only did the "lateral replays" in the more important dayparts, and simply simulcast during other periods. (This meant that some songs didn't get replayed at the end of a shift, and others were played only on the AM to make up the difference at the beginning of the next replay shift.)

An aside: WKLO had a storefront studio on Walnut Street (now Muhammad Ali Boulevard) for many years; when WKLO-FM stopped simulcasting in the 1960s they added a second studio without the view. A side effect of the switch to KJ-100 was that the FM and AM studios were swapped -- though I don't know if this was immediate, or happened later -- and the FM, now WDJX, kept the storefront studio until the stations were bought by Clear Channel and moved out of the building.

>I know we've discussed this before but I don't think I ever read a
>definitive answer on this.

IANAL, but I would have to say yes. Does anyone care? Apparently not. A lot of stations are good about it, but there are a number that aren't.

The best example of mostly disregarding the legal ID rule was with 107.9 in Roy UT (Salt Lake City market). At the time it was KSNU. They had been doing a simulcast of KOSY/Spanish Fork, but that simulcast was moved to KRAR/Brigham City.{1} They decided to fill the time with an automated all 80's hits format. (Helluva format too.) The bad part was that they programmed the automation so it went: <song> <liner> <song> <liner> <song> <liner> <song> <liner> ad infinitum. Roughly every 55 minutes there was a different liner with the legal in it. Upshot was, the legal could air literally anywhere during the hour. It continued until the station was sold. It is now KFVR-FM as Fever 107.9 (rhythmic oldies).

{1} Side note. During the transition, the same program could be heard in a good sized overlap area on 106.5, 106.9, 107.9 and translator 103.1. Amazing waste of dialspace.

He's actually far more likely a flak for a consultant or a competitor or for someone else who has an economic stake in undermining Medved. By using this medium to foment doubt and discomfort among those who determine Medved's clearances, he's in fact showing an acute understanding of broadcast economics.

His post is reminiscent of those of that brian fellow who taunted and mocked the labor side during CBS's labor strife in Chicago a year or two ago. You can see that there's a professional writer, information no typical groupie would be privy to, and a hidden agenda.

You properly challenged him yesterday to reveal his stake and his biases, yet today, on no new evidence that I can see, have concluded that he's a groupie, i.e. economically disinterested fan, posting from ignorance. The news is full of people who take positions, then use the newsgroups to influence the movement of particular stocks. In the still bandwidth-scarce, winner-take-all environment that is broadcast radio, we can see means, motive and opportunity to undermine the "stock" of an opponent, exactly as is done in electoral politics.

Again, more emotion. If you're going to convince me that the original post is incorrect, please indicate with factual evidence where it's wrong.

Do you know for a fact that the program makes a lot of money or are you making a generalization based on other ones you are familiar with?

Otherwise there is no reason to believe you simply because you've attacked someone's motives.

At www.AMStereoRadio.com you can find an aircheck of KIIS-AM and KIIS-FM in California, back when they were "almost" simulcasting. They had different DJs on the AM and FM sides, but they played the same music in the same order, with the FM station always one song behind the AM station. Even most of the jingles were the same, just with "AM" or "FM" inserted as appropriate.

Greater Media did the same thing with their "Magic" stations (WMGC, WMGK, and WMGQ), but these stations were not in the same marketplace so it really didn't make a difference. Out of the three, only WMGQ still has the Magic format; WMGK has switched to a classic rock format, and I don't know about WMGC -- they might have gotten new call letters.

That station was doing color bars about 12 years ago, and it
finally went away. Full power channel 2 in Houston starts
interfering with full power channel 2 in Denton (Dallas)during skip
conditions. This operation will be wiped out many summer days.

Medved is not particularly liked. He has the mannerisms and
speech of a gay man, seems to never miss an opportunity to
attack any movie of show with a positive view of homosexuals, and
keeps reminding the audience that he is heterosexual.

There was no specific intention as to how far ahead or behind either side of the equation was. The FM was slightly behind the AM at the very beginning of this aircheck, because they had just come out of AM drive which was simulcast. The AM dumped out and started it's first song just a few seconds before the FM, so it was sequeing into it's ID cleanly without any evidence of the FM sequeing into it's ID. They were virtually in sync. I ought to know, as I recorded those airchecks, on separate radios and recorders, and edited the final product you have here. There is no way I could have gotten each individual break in the airchecks had I tried to edit them live. The two jocks were always stepping over each other. The whole idea was to have KIIS-FM available on what were still quite common in those days, AM only car radios. As soon as the simulcast restrictions were eliminated, they went to a full time simulcast and just canned the AM jocks. Sounds alot like what consolidation is doing today. You see, nothing in radio is really new.

KBEJ's transmitter is so far from both San Antonio and Austin that it
doesn't provide an adequate signal to either. From the San Antonio
newspaper:

Channel 2 woes

I've heard from numerous disappointed viewers in the
San Antonio area who report they haven't had much
luck tuning in the new UPN affiliate KBEJ, channel 2.

So I consulted the director of engineering for KBEJ
and KENS, which are both under the management of
Belo. And Frank Peterman insists that the secret to
good reception lies in the position of the viewer's
outside antenna.

He suggests that viewers who have been having
problems "rotate the antenna to a northwest position
because that's where the transmitter is ï¿½ about 10
miles east of Fredericksburg."

Also, make sure the antenna is at least 30 feet off the
ground.

IMO KBEJ's only hope for survival is to get on the cable systems in
Austin and San Antonio, otherwise its audience will be mostly
rattlesnakes.

My correspondent in San Antonio says that the channel 2 LPTV in San
Antonio K02MX is still on the air!! That LPTV's signal is often a
technical disaster. Even odder, the LPTV has some vague ownership
relationship with KBEJ, though it doesn't have common programming.
Maybe KBEJ's owners have forgotten that the fully-automated LPTV is
still on the air!!

><snip> The whole idea was to have KIIS-FM available on what were still
>quite common in those days, AM only car radios.<

Pretty good reconstruction, gentlemen.

On 102.7 KIIS-FM & 1150 KIIS-AM Los Angeles we called it "Shadowcasting." The technique is similar to what Charlie Parker did with WDRC Hartford in the early 70's, a combination of simulcast shows and separately performed AM & FM shows outside drive times, according to the current FCC limits.

Kevin is right about the playlist. Music and commercial logs were the same on both signals 24 hours a day, but there were different jocks outside drive times.

The AM, FM and Dees studios all had the same raw materials to work with. All our carts were done in triplicate. We had three identical recorders that fired from a single set of start and cue buttons. There were separate "AM" and "FM" sings done on two JAM jingle packages... "Hot Kiss" and "WLS '84"... plus another two dozen shotgun versions I mixed out in our own studios.

KIIS did not use cart sequencing in that era. While separated, the two jocks would develop their own talkovers, bits, fade points, phone calls and jingle selection... so "the lead" on music might change any number of times during the shadowcast.

Gene is right about how the stations split. The FM studio would originate the simulcasts, and it was up to the AM jock to execute docking maneuvers. Each split at the end of Rick Dees in the Morning would mean leaving the FM early.

Joins were trickier, but by communicating with the FM studio, KIIS-AM's Steve Lehman (yes the Premiere Radio Networks co-founder) would try for a simultaneous start of the last song of separate programming. Then while it played Steve replaced his version with what KIIS-FM's Paul Freeman was playing before Big Ron O'Brien would hit the ID for simulcast PM Drive.

I don't think in this case there is much abuse. It is part of the San
Antonio TV market and it is a full-power 100 kw outlet broadcasting from a 1355'
tower 40 miles away. San Antonio's original Fox, and now WB, outlet KRRT-35
is licensed to Kerrville, 10 miles away from KBEJ's city of license. I don't
know if it is any more abusive than WESH-TV, channel 2, Daytona Beach demanding
to be on Orlando systems.

According to their schedule, it will be the broadcast home of the popular
local NBA Spurs team, UPN, and a bunch of syndicated fair. It will carry
some of Belo's other programming (replay of KENS-5's noon news, simulcast
"Good Morning Texas" from WFAA-8 Dallas). If Paragon there has to toss off
a channel, I would think KBEJ would have wider appeal than a whole host of
niche cable channels.

I think real must-carry abuse comes from new TV stations coming on with >50%
infomercials and paid programming like home shopping services and getting
must-carry status. Their should be a rule that excludes those outlets.
The FCC did strike down KTRG-10 Del Rio's request to get on cable systems
in San Antonio a while back. It was hard to convince them that a station with
weak facilities whose tower was 140 miles away from San Antonio needed to
be added there.

As part of securing the UPN affiliation, Belo also got it for the Austin
market. So, K13VC Austin will lose it soon (October?). K13VC has cable
carriage (I would guess co-owned KTBC-7 probably helped in getting that).

Like what? One of the six (6) home shopping channels I'm forced to pay for?
Or maybe the informercial channels they run on the local cable company
channel?

More like 50 miles from downtown SAT, and a similar distance from
downtown Austin, for that matter.

> San Antonio's original Fox, and now WB, outlet KRRT-35
> is licensed to Kerrville,

But KRRT's xmtr is about midway from Kerrville to SAT,

Source record: 18007

"The new kj-100 am and fm. Gee I remember when that happened .I used to sit outside in the summer with my portable radio. I believe this happened in the very late 70's early 80's as I remember them playing Songs from Billy Joel's "Glass House" album. We used to listen to this station in our cars because we did not have radios capable of receiving fm. I belive the turn around was much faster that 5 or 7 minutes. I can remember listen to the fm side then tuning to the am side and hearing the song again. Yes there were times when the turn around was longer. I always had the idea that the fm jock would pass the record through a window to the am jock to clue up on the am side.
The new kj-100 did not become wdjx next. After the failed kj-100 format it became magic 100. Then when the magic 100 format failed it became Wdjx. This came about in late 85 or early 86. I was a student at the university of Louisville at the time and worked in the student activities at the Red Barn as a sound and light tech. The Uof L Cardinals won the Ncaa basketball championship in late March or early April and we were running wdjx thru our board and out to the roof of the Red barn and djx was a fairly new station at the time.
As to ownership I belive when the 99.7 sign on it was owned by Great trails Broadcasting. The other owners as follows Stoner Broadcasting, American Radio system, Reagent Broadcasting, Jacor Broadcasting. Then when jacor and Cheap channel merged Jacor was required to spin off the station they owned in the Louisville market to comply with the justice department. Wdjx,Wlrs and am 900 Wfia where sold to Blue Chip Broadcasting of Cincinnati Ohio. Not Cheap Channel. Wvez and Wsfr where sold to Cox Radio. Wmhx 103.9 as it is known now was being sold by Jacor but at the time was owned by another party was also bought by Cox Radio.

Apparently Wall Street doesn't agree with Salem's "style" as the share price has dropped two-thirds from the high earlier this year. Some of the other radio stocks are off this year too but not by nearly as much as Salem.

It's right on the edge of "empty" Texas in the Hill Country.

Its COUNTY of license [Gillespie] had a 1980 population of 20 thousand. The other counties mearest KBEJ's xmtr are Kerr 43 thou, Kendall 23 thou, and Blanco 8 thou. For a total of about 100K, many of whom watch San Antonio or Austin on cable. My friend living between Kerrville and Fredericksburg uses cable and Dish Network. Beyond those counties, an outside antenna or cable would help a lot to receive KBEJ.

And now back to RADIO.

I think you're probably right. His response to me has been pretty
useless, accusing me of having an "emotional" response. It appears he
has some axe to grind with Medved or Salem.

One has to understand the operating principles of Salem to make an
accurate analysis of their programming. My point is that there are
many reasons why a company produces a show. Being #1 is often not the
primary goal, especially when there's a philosophical or religious
component that must be satisfied before you can go any further.

In every market there are many "not #1" stations that make a killing.
WFAN, New York is the prime example of a low rated station being the
#1 billing station in the entire industry.

Groupies rarely understand how that can happen.

>attack any movie of show with a positive view of homosexuals, and
>keeps reminding the audience that he is heterosexual.

Not particularly liked by whom? Have you taken a poll or survey to confirn this. I've known many men with stereotypical "gay mannerisms" who are as straight as they make them. Gary Bauer, former Presidential candidate, could be the poster boy for any gay recruiting poster you could imagine, yet he runs a "family" research organization and campaigns against everything that has a gay component to it. Are you saying Gary Bauer is gay just because he acts like he is?

A generalization as broad as yours is ridiculous on its face. Tell us specifically who doesn't like Medved.

At least I have an IQ high enough to see the brilliance and careful
thought that went into this post. I also have the dexterity required
to use mixed case in writing. I guess the WebTV manual didn't cover
that feature.

Personally, I've never heard Mr. Medved's program. I have, however, heard him on at least a half dozen occasions when he guest hosted the Rush Limbaugh show.

He sounded like someone who could pull off a daily 3 hour talk show.

All that being said, if he's on Salem's radio network, the economics of his program are much different from a lot of competing shows.

Salem is, as a practical matter, a religious broadcaster. (even though they own stations with other formats and claim some of their talk programming is "secular")

Their investors put money in the company for more than just a monetary return on their investment. They invest in Salem to have a certain type of programming broadcast nationwide. Mr. Medved's program more than likely works to achieve that goal.

If he has good ratings, that's all the better for the investors - but the type of show he has on the air is likely more important to most of Salem's investors.

Just my 2 cents.

3542. LPFM Filing Window

Newsgroup: rec.radio.broadcasting
Date: 2000-08-11 00:00:00 UTC
From: "MonsterFM.com" <engineering@MonsterFM.com>
Message-ID: <8n1idb$17q$1@nnrp1.deja.com>
Source record: 18091

LPFM filing window number two is coming up in just about two weeks. If you have not already sought out technical representation (and there HAS been enough "dis-information" thrown around to warrant this), you should do so, now. Should you choose to be represented by another firm, so be it. Just DON'T go the "homemade application route" unless you're a substantially knowledgable person! (I've actually had conferences with other consultants who had been "mis-informed" by supposed "LPFM Advocates" and had submitted flawed applications due to the "dis-information" handed them!) During the first filing window, I advised several clients against the "homemade application route". Four of these clients decided to go against my advice and of those four, three are seriously flawed and the fourth (although not AS seriously flawed)is in jeopardy of being returned.
There are a lot of people who will attempt to convince you that an LPFM application is "a peice of CAKE!" Fall for this trap, if you wish. I've always compared the "homemmade application" a lot like a court date without representation: You can do it but, you PROBABLY won't win...
Now, with all of this in mind, PLEASE seek out technical representation! As I've stated above, if that's another engineering firm, so be it. Or, if you'd like to discuss your application with us, we'll be glad to assist you in any way we can.
We're still offering financing of applications, easy payments and, if you qualify, pro-bono (free) filing!
Before another flame war is started because of this, I'll answer the questions FIRST:

Why?
Because LPFM is a very viable service and, when properly implemented, WILL give a lot of big commercial operations a bit of a "run for their money" in certain areas. Besides, our major income is from full power broadcasters who are about as "sick" of the "rape of the American Airwaves" as we are. (Yes, there actually are licensed stations out there who feel that the current "consolidation craze" is a MAJOR screw-up... For the listeners, that is!)

Are ALL applications filed for free?
No, only those who are able to demonstrate the need for pro-bono services will be accepted for this plan. BUT, we are very generous in these offers and, if you're not fully qualified, there are various discounts available. Besides, if you don't get on the "free" program, the paid applications are just a small monthly payment ($74.90)! Go out and try to buy a radio station for THAT monthly payment. Then you'll see what I mean!

Our new web site (MonsterFM.com) is almost up. There are a few more
adjustments to be made and it'll be up to full power (so to speak).
This will be a MUCH more involved site than our old one (which is still
available at http://www.radiolink.net/1069) and will allow you full
access to anything you may need to know pertaining to the LPFM
application processes (as they've been implemented, thus far).
Any questions? Contact me and I'll be most happy to help! But, as for
the next two weeks (approximately), I'll be up to my ears in LPFM
applications and several full power upgrades...

Does anyone know the details about WLEY's transmitter
changes? They seem to be moving from the WMAQ tower
to the tallest office building in the western suburbs
of Chicago. They also have a an application for a
booster in downtown chicago. Will this really
improve their coverage? Why do they need a new main
site to add a booster? The new site is closer
to the booster than the WMAQ tower? thanks Ken

Not quite right, either. Call letters were assigned in 1922. The experimental calls predated the first assignments or, in date, preceded March of 1922. BP Forum on Compuserve has a list of the calls assigned in 1922 along with an indication of which of these has been under continuous operation.

In the 1922-1934 period there were frequency assignments, based initially on wavelength. What happened was that there were fewer assigned channels and stations shared these channels with, in many cases, shared operating hours by stations cochannel but in different cities. From recollection of early DX listings, 833 was one frequency used in about a half-dozen places in the US on a shared basis. The call assignments by treaty were done in 1913 in a London conference. I suggest checking a very interesting site at http://www.ipass.net/~whitetho/buildbcb.htm#first where you can see there were very specific wavelength assignments between 1922 and 1923 for the operation of stations. The call letters and frequencies were not determined by the licensee or permitted, though.

By the 1930's, the system of shared frequencies and wavelength allocations was strained by the number of stations and the advance of technology. The Act of 1934 brought the regulations up to date with technology. Most of the groundwork and original regulations was done in the 1920-1923 period, though.

As to Mexico, there were many stations on the air before 1934; XEH in Monterrey went on the air in 1922 and Mexico had dozens of stations prior to 1930. They were, of course, all using the international allocation of XE as

a prefix. As an example, XEW, the huge and powerful AM and Shortwave station that became the base for the Televisa empire, went on the air officially in 1930 but had been on with out official licensing prior to that time; many other stations in Mexico were on and operating regularly well before 1934.

In fact, the first continuously operating radio station in the world may well be 1110 AM in Buenos Aires which has a direct continuous link to its original authorization in about September of 1920 by the Federal Government of Argentina and with a treaty-sanctioned LR prefix.. Cuba authorized the first CM- stations in 1922; Puerto Rico had one of the first US assignments in WKAQ in August of 1922 and it went on the air in September of that year.

The US did not decide on "K' and " W" but were issued those, among other, prefixes by treaty. The decision to use K and W for radio services was made in 1922 in accordance with the treaty provisions.

Salem's investors are the same as investors in Clear Channel and Emmis. It is a profit-seeking and profit-making concern. Salem has a formula to use inferior facilities in many cases to make money through specialized religious or niche formats. The Salem stock is NASDAQ traded, and the majority of investors, I'm positive, are not in it for the mission but for the money. I, for one, as an investor, don't care what they broadcast but would like the stock to take an upward swing!

Salem, at about 11, is off 40% from its IPO price. Most of the secondary
radio issues have been running into trouble. SBSA is off 65%, and a variety
of other, dissimilar operators are down. Remember that the NASDAQ as a whole
is off about 25% this year and most recent radio issues are NASDAQ listed.

David, I wouldn't pin SALM's performance on the Nasdaq. It would be a weak explanation even if it fit the numbers, which it doesn't. The Nas is roughly unchanged this year; the 25% drop is from its spring peak. Note a year ago it was about 2400. SALM's been in free-fall; it's overextended into weak signals with niche formats in the dawn of crystal clear DARS. Great stations to listen to if you want to hear whether you left your computer on or your sump pump is running. Investors are extremely skeptical about an operator's ability to squeeze more revenue and more mindshare out of this old, played-out, disrupted system. They're showing every confidence in XMSR and SIRI, also on the Nas. Starting from IPO also really understates the decline of SALM; XM IPO'd about 11 less than a year ago and has nearly quadrupled it, but it's a meaningless starting point to most investors.

Salem is a Salem & NASDAQ issue. Issues like AFM and CCU are substantially
up; AFM is up 325% over its low of 1999 with a very conventional set of
radio properties and no real new technology focus and its merger into CCU
does not substantially change the model. Salem appears to have two real
problems which are the lack of understanding of the profitability of
religious stations (and the low cost of entry) plus a bungled launch of a
Christian e-commerce and web initiative that even shareholders don't
understand. Salem's base business is doing better in terms of same-station
performance than most of the bigger companies; smaller broadcast issues have
not fared well. Even look at the massive drop of Univision the last few
days... and that group has a near-captive market with less new technology
intrusion.

IOW, XM or Sirius are sexy even if they are not profitable and have an
unproven business model, while Salem is profitable but seems kind of
rust-belt to risk taking investors.

Yes, I know I'm a weird radio geek, but I have a soft spot in my heart for the pre 1986 era when AM and FM stations would simulcast part of their programming and seperate in certain dayparts with the same format. Made for interesting radio. I remeber KEYN AM and FM in wichita doing it in the late 70's. KEYN AM went oldies in 1980

You said Mexico had not developed radio prior to 1934. This was among the numerous errors and misinformation in your extremely inaccurate post about the history of radio. The fact is that Mexico was only a year or two in developing radio so you can not say that the medium was undeveloped or even underdeveloped in 1934.

P.S. Don't be so goldurned critical of everything. It's bad for the digestion. Your first sentence has several punctuation errors. The second one has two. The fourth has one also. Someone who improperly and against usnet "netiquette" continues to post in all-caps should not be hurling rocks from their glass house.

3560. History of AM broadcasting (was: Medved floundering)

Newsgroup: rec.radio.broadcasting
Date: 2000-08-12 00:00:00 UTC
From: David Eduardo <amdavid@pacbell.net>
Message-ID: <B5il5.133$ut.76399@news.pacbell.net>
Source record: 18016

Excuse me, but when you post highly inaccurate information about the history of broadcasting, someone has to correct it. You went so far as to say that there was no allocation of frequencies before 1934, that stations picked frequencies and calls at will, that the US self-assigned itself the W and K prefixes and that there was no development of radio (you said "underdeveloped" which means the same thing to most folks) in Canada and Mexico prior to 1934.\

In the process of replying to you, I mentioned a most interesting website that I found had been recently updated with still more information on the chronology of radio broadcasting in its earliest years in the US. I certainly learned a great deal form the site, including an understanding of the developmental process of frequency assignment from the original wavelength system to the channel system that was finally refined in 1934. I recommend it for informative reading, and I actually printed a lot of it to read on a plane trip in a day or so...

For those who missed the post of the URL, there it is again... http://www.ipass.net/~whitetho/buildbcb.htm#first and it makes very interesting reading even if just a skim of the important facts is done. I've been trying to locate the listing of 1922 call letters that was on CompuServe's BP Forum, but to no success.

You see, by questioning the truth of your post, I found a wealth of data I did not know. I'd hope that you would do the same thing and learn from the postings here. Among the people I have picked up valuable knowledge from on this group are Steve Crowley, Rich Wood, the ever-informative Peter, Wally Walro (sp), and many of the posters who provide a detailed look at the goings-on in their individual markets or areas of expertise.

You, on the other hand, spout invective and chastise anyone who disagrees with your oft-unresearched or conjecture based posts. Your refusal to use the net-standard posting protocol of mixed case is just a minor irritant but certainly shows that your attitude, while if not purposely that of a troll, is certainly one of a person with a meaningless chip on their shoulder. I've reversed my position: as long as you continue to post incorrect data about the industry, I'll contribute to the extent of my knowledge in an effort to prevent people who have had fewer years in the biz from taking away the impressions that you leave.

Have a good day.

Wasn't my website... I found it in the course of finding out why Ray's postings did not seem to make sense.

> BUT IT "COULD" HAVE LEFT SOME THINGS
> OUT AS WELL. IN THIS CASE IT SEEMS TO BE.

If it left things out, write to the author / webmaster. It agrees with much of what I knew in an admittedly more spotty and incomplete nature. Interestingly, the site has references and a bilbliography for everything it posts. I have no idea who the author is, but the job seems accurate and credible. You, on the other hand, have posted no sources except a book that is out of print and apparently inaccurate.

>I AM GLAD YOU ARE LEARNING

These groups are based on one simple thing: opinion. You have the right to yours. I have mine. We disagree. Next.

However, when opinion is supported by facts that are patently wrong or simply fabrications, it's time to speak up. You seem to have a distant relationship with the truth. Sad.

The search for information on the history of AM radio, particularly in its early days made me think of adding links on my own page to sites that have station history, industry history or related items. If anyone wants to suggest some URLs to me, send them to amdavid@pacbell.net or post them in this thread. I'll be adding a radio history links page to www.davidgleason.com tomorrow and registering the metafile of the page with the various search engines.

>>You're pathetically understaffed. You should have two fully capable engineers
and two helpers.<<

We just finished a discussion of this on a remailer I subscribe to. It started as a discussion of where the next generation of radio station engineers would come from. Job postings like this were fingered repeatedly as the reason that people won't go into this business. One engineer and one "helper" (and just what the bleep is a "helper," anyhow?) is NOT enough for 6 stations, especially with the geographic separation noted in the ad.

One ad that someone on the remailer brought to our attention was for a job in the Florida Keys....7 FM's and 1 AM, no indication of any other engineers on staff, and starting pay of $35-40k. What made it worse was that the owner angling for an engineer to fill this job was Clear Channel. If the big boys don't "get it," what hope is there?

CBS had a job open for over a year.....CE at WFAN, the highest-billing station in the country. My understanding is that they were paying $70,000, which is a ridiculously low salary, given the level of responsibility and the cost of living in the NYC area.

Which is why Milton missed my congratulatory post on an unusual and listener-benefit filled effort he is conducting on a noncommercial FM in the Metroplex, why he missed my post on the reliance on ProTools and will not even get the name of a very good consulting engineer who specializes in getting exceptions granted to the conductivity tables that are part of the AM rules (which he posted asking for).

Oh, curiously, Milton does not know me. So I doubt he has any way of knowing what I drink (nothing with alcohol) or what my preferences are in a wide variety of subjects. I guess, on analysis, I've described a troll and by responding proven that I'm a sucker for a good troll post. Oh, well, it's kinda' fun at times.

There is a Spanish site at http://www.cirt.com.mx/2.html that establishes XEH from Monterrey as the first station in 1919 as CYO. I have some books somewhere from Mexico, and will look them up. If I can get a chronology, I will.

Dear Sid:

This poor little nice Jewish boy, ex CE for a Boston AM/FM and HAM for 50 years in Sept will be very happy to make $70,000 a year in NYC. I could live in Brooklyn! (Ha!)

I get by on social security and ssi of $532.00 a month total. Try that! An unfitting end for the past President and founder of a SF, CA FM!

So tell me more about WFAN! I will take it and I can handle it!! I handled a staff of six union engineers in Boston in 1978. I am also a former Field Engineer for Harris Corporation.

By the way, I was a CE for a Clear Channel FM (Class C) in Houston in 1991 and they paid me $39,000 a year plus a free cell phone, pager and vehicle and one helper!

Since I am single was able to get by.

Help Help!! ""Nice Jewish Boy" from Brooklyn is starving!

I live in Macon, GA now. My email is wrecktech@yahoo.com

Tel: (912) 741-7695.

Pass it on!

Cordially,

Meyer (aka the nudnick) Gottesman

I really long for the days when NBC, CBS, ABC, MBS and Westinghouse (Group W) were big players in broadcasting, and could own no more than 7 AM, 7 FM and 5 (VHF) TV stations in all. Heck, let's not forget about RKO-General, Metromedia and Storer.

Radio, in particular, has gone downhill since GE obliterated RCA and NBC bailed out (thanks for nothing, GE!). And don't tell me "the listener has more and better choices today", what with consolidation of ownerships, mergers, buyouts, takeovers, ad nauseam.

Ten U.S. cities have more than one Class A stations:

New York, 6: 660, 710*, 770, 880, 1130* and 1560*

Chicago, 5: 670, 720, 780, 890 and 1000*

Cincinnati, 2: 700 and 1530*

Philadelphia, 2: 1060* and 1210

Los Angeles, 2: 640 and 1070*

Nashville, 2: 650 and 1510*

Seattle, 2: 710* and 1000*

San Francisco, 2: 680* and 810*

Dallas/Ft. Worth, 2: 820 and 1080*

and Minneapolis/St. Paul, 2: 830 and 1500*.

Three U.S. cities have two Class As owned by the same licensee and one city has four Class As owned by two licensees:

New York, 660 and 880: Infinity

Chicago: 670 and 780: Infinity; 890 and 1000*: ABC

Cincinnati: 700 and 1530*: Jacor (the FCC site doesn't reflect the correct licensee)

Philadelphia: 1060* and 1210: Infinity

* = Class I-B; all others Class I-A.

I've always found David's post to be very informative. And more than once I've asked a specific question and he's answered very promptly and courtesly.

I'm glad David shares his knowledge with this group, and I'm sorry Ray disagrees.

Don't forget Roy Park... the only individual who during that era owned 7 AMs, 7 FMs, and 7 TVs (at least 2 UHFs) Plus he owned a whole pile of newspapers, mostly smaller, many weeklies. He made his fortune inventing Duncan Hines cake mixes!

And while Roy owned AMs in major markets including NYC, one of his 7 AMs was in Yankton SD... WNAX, a cash cow if there ever was one... endless spots surrounded by farm reports during the day time, high school sports, the rosary, country music. Anything that would sell to a very loyal agricultural audience.

I've recently started helping mic & mix a weekly live music show for a community radio station. So far we've ranged from classical guitar to loud guitar/bass/drums with screaming vocals.

I'm wondering if it's rare these days to broadcast music performance live to air as opposed to taping a show for broadcast later?

Thanks. Unless I'm totally clueless (I've been called that once or twice,
thanks), the idea of these groups is to discuss, debate and have fun. I'm
opinionated, as anyone who has been in radio for over 40 years has to be, I
guess... I hope I don't offend anyone that I wasn't purposely trying to
offend!

Interestingly, I was watching a DVD of a TV special done in Canada about the evolotin of music radio. In 1954, NBC/RCA stated "Radio is dead." I guess this came from the belief that TV (in which RCA had a very vested manufacturing interest it did not have to any extent in radio) was going to end all radio broadcasting. NBC ceased to be a real player in the 60's by their own omission.

Storer, we should remember, is the company that sold most of its FMs in the 60's or 70's for tiny amounts of money because they saw no future in the medium. This same attitude permeated the attitude towards the AM staitons among those on Kane Concourse in the Bay Harbor Islands. Of the whole first group, only Westinghouse was reasonably progressive. ABC was eratically successful with its stations. RKO, with the little inconvenience of being deemed unfit as a licensee, had great radio staitons after they went Top 40... Metromedia was a good radio company only until Kluge decided to get into TV.
>
> Radio, in particular, has gone downhill since GE obliterated RCA and NBC
> bailed out (thanks for nothing, GE!). And don't tell me "the listener has
> more and better choices today", what with consolidation of ownerships,
> mergers, buyouts, takeovers, ad nauseam.

NBC was nuked because since the 50's RCA had been a money losing division. They got out of radio ownership because the company was so big in TV that the resources and time needed for radio were thought to be draining on TV development. I know the person who was responsible for shutting down the O&O division, and it was simply thought that radio was too small for NBC/RCA/GE. What can you expect from a company that publicly declare that radio was dead?

The real innovators in the 50's and 60's were broadcasters like Gordon McLendon, Todd Storz, Bartell, Rounsaville, McLendon Ebony and the owners of the early FM stations that consistently operated them despite losses.

Yeah, good ole Uncle Roy... I was wondering when someone was going to mention
him in this newsgroup. I worked at WNCT-AM/FM/TV, his first broadcasting
properties in Greenville NC, for many years. He ran a tight ship but didn't mind
spending money for the right things when the situation called for it. Park also
had admirable standards in programming- for example, his stations did not carry
the Morton Downey Jr. show even though the syndicators really tried to place it
with them. Gawd only knows what he would have thought of Jerry Springer. The FM
was one of the last of the "beautiful music" stations and the AM boasted a full
service farm news department, neither of which exist at all in this market any
more. Today the FM is your garden-variety "Good Times Great Oldies" cookiecutter,
the AM is 24/7 Spanish, and the TV looks like any other overconsulted
slicked-up major market wannabe. Don't even get me started on the brutal
housecleaning Media General performed when they took over the TV side.
He will be missed.

Interestingly enough, Salem is a program provider to XM, where they will program one of the talk/news channels and two of the commercial-free music channels. Even if most of the talk programming is simply repurposing their current lineup (and if one of the music channels is just their "Christian Pirate Radio" format with extra songs stuck in during the stop sets), in this case they seem to be trying to stay ahead of the times.

The Park operation was obviously a mixed bag with little corporate oversight. I was involved when WPAT was sold, and the facility was dismally antiquated and had been run in a style prevalent decades earlier. The station had no interest in the community and was woefully stale in its efforts to keep beautiful music alive. A friend took over a Park station in Florida and said much the same thing: decrepit, lax and unprofitable. It appears that some of the managers were quite competent, while theirs were coasting or clueless based on folks I've known who put in time. I know that most of the Park stations suffered "brutal housecleaning" when sold off... much had to do with the fact that they were minimally profitable in lots of cases and just not good businesses.

While I get your point about Greenville, I would say that the market has changed form the time that the AM could do anything useful in English. Putting it in Spanish is very much a positive step in serving a group that

is fast-growing and in need of service. The TV story sounds like all TVs nationally... the obsession with news set design over content, the "if it bleeds it leads" attitude to stories and the seeking of instant impact. While radio has gone towards greater stationality (for good or bad), TV stations seem to be devoid of any commonality or image per se and are just a collection of programs.

All the XM material is supposed to be "new" and not a refeed of terrestrial offerings. I guess that the Christian format will be a base for the music channels, but they will not have more music due to no commercials: most XM channels are going to be commercial and will have a much lower load than land-based radio. I'm working on 5 of the channels myself (Spanish language formats) and XM truly wants original product, not rebroadcasts of syndication.

Still, I agree that Salem is looking for the next area of development. They have spent a lot in internet and e-commerce areas, and that is precisely what tanked the stock! The broadcast division is way ahead of forecasts, but the market has taken a real dislike to internet ventures of the unproven sort and socked it to Salem there.

It is rare, but it happens. We broadcast live music shows every
Friday and Saturday night on KUZZ (AM) and KCWR. Of course, the
performer (Buck Owens) owns the stations and the restaurant/night club
in which the shows take place. But it is live and local, and
listeners seem to like it--and for those who don't, the regular format
is maintained on KUZZ-FM.

We've also broadcast some other live shows from the same venue, but
not on a regular basis.

In LA, Recuerdo (KRCD&KRCV) FM, a Spanish oldies station, does live oldies broadcasts sporadically on Saturday evening with comeback bands and original artists. The station has a "sock hop" type of show on Saturdays, and the live music is an interesting variant.

Also in LA, KSCA and KLVE (#1 and #2 in the market) have long broadcast their major park concerts live several times a year.

An FM station I work with in Buenos Aires, Argentina, just did a series of 1-hour live concerts for two weeks running from a large city fair; a live in-studio unplugged series is starting soon. The technology is such today that live remotes can be so good in quality that the songs sound as if they came form a CD. I think listeners like the slight difference and variety.

Yesterday (8/12) we broadcast our annual "live" music program. We have a one-hour polka show Saturday morning, and each year (I think for about the past 15 years) we have a live band play from a nearby "threshermens and collectors" show... which is quite an attraction, with displays of old farm equipment and demonstrations of old farming methods. It attracts thousands of people each year.

There were several hundred people who showed up for our polka program yesterday and they seemed to have a good time.

3593. Storer - Was: Silly Simulcasts (was 1160 670 Switch)

Newsgroup: rec.radio.broadcasting
Date: 2000-08-13 00:00:00 UTC
From: peterh5322@aol.com
Message-ID: <20000813172247.29519.00000203@ng-cp1.aol.com>

David Eduardo amdavid@pacbell.net remarked ...

>>
Storer, we should remember, is the company that sold most of its FMs in the
60's or 70's for tiny amounts of money because they saw no future in the
medium.
>>

Storer sold its L.A. AM (KTNQ, ex-KGBS) for $8 million, and its L.A. FM
(KGBS-FM) for only $4 million.

Obviously, these late 1970s sales anticipated the inversion in value of FMs and
AMs.

Some AM properties, although certainly none in L.A., are very nearly "give
aways" now.

If you use the DAW from IQS, SAWPRO check their web site for a new on line tutorial!
I have learned many neat things I didn't know. Really sped up my spot production! The tutorial has many ideas you can use with the SAW32 programs as well.

WIth this new offering from IQS kinda makes me wonder why anyone would spend $$$$$$ on Slowtools!

A point that everyone has missed is that the sticks for all San Antonio TV and most FM stations are Southeast of San Antonio near the lake! Ch 2 is being received off the BACK of any fixed antenna that can't be rotated! Its northwest of San Antonio, or so I am told.
That is the real problem!!!

Milton Finks

Do you show what WGBS-FM in Miami went for? I think it was something like
$325 thousand... last full C in Miami went for over $100 to Cox.

It's strange, because when Storer started selling the FM stations, there
were solid signs that the band was going to be profitable and successful. I
think it was the mostly-TV group that was running the company in Miami at
the time that made that inaccurate call. I can't complain, as profits from a
few shares of Storer allowed me to build my first station in '64. When I
bought those shares, Storer still owned such major stations as WMMN-920 in
Fairmount WV (now silent).

I agree on this... I always though that the reliance on Protools came from its base in the Mac world and the dependence on Mac architecture in graphics and audio production. Somehow, anything that is Mac based just _ has_ to be better, even if it isn't. I've been doing PC based production for a decade with no hassles and a lot less cost, although the early problems were file compatibility, now a thing of the past with al the PC based DAW and live assist/automation systems.

I'm sure you meant $100M to Cox, not $100K, David.

Best deal I found was a non-directional Class B (AM) station in the capitol city of a west coast state, and that station sold for only $60K, including real estate.

Yes... I meant $100 million. After breaking the spin-offs from the Marlin deal, WTMI, a Miami classical station with a full C went for just North of $100 big ones. Compare that to the less-than-a-million Storer sold the FM of WGBS for and it is amazing.

There was an AM station in Grants, NW, I think, on E-bay last week and it apparently went for around $40 thousand. I recall when MTV did a contest in about 1990 to give away a radio station. It turned out to be the AM daytimer in Thomasville, GA, on 730 AM (serves Tallahassee to an extent). I don't think the winner actually ever took it over. Personally, I liked the islands MTV gave away better.

It still doesn't mean that all caps isn't hard to read for most, or that folks with vision problems who want to read messages in all caps can't convert them to ALL CAPS with software.

Besides, DOING THIS in the middle of a message does attract your attention to the capitalized words, which means that for a visual print medium it is the equivalent of shouting.

I usually delete messages with all caps too. To be honest though, when I began reading this thread, I thought I was going to read about some regional DJ worth mentioning, rather than a poster's alleged faults.

Yes, but when they said "radio is dead", did they mean that radio in its 1954 form, as the lead provider of home entertainment was dead, or did they mean that it is COMPLETELY dead?

What is important in such statements is the context in which they are made.

Was radio completely dead as far as RCA was concerned, as far as a money-maker and viable business medium for them? If so, they were absolutely correct.

Was it dead as it had existed up until then, where people would no longer tune in to listen to Jack Benny, Abbott and Costello, and Amos'n'Andy, now that most homes had television available? And that radio had to re-invent itself for survival? If so, they were absolutely correct.

If the statement was "radio is dead", then they were dead wrong.

If the statement was a qualified "radio is dead -- AS FAR AS THE EXISTING MODEL THAT HAS BEEN IN PLACE SINCE THE LATE 1920s AND WE MUST THINK ANEW" they were right on the money.

Park Broadcasting? Reminds me of my days at KJJO/Minneapolis (1994.) What a mess! Still using antique equipment from the 60s. Every few months, the format changed. Salaries were woefully lagging in comparison to other stations in the market.

But the best part was the transmitter location. When the Twin Cities combiner project was announced in the mid-80s, Roy apparently didn't want to pay to lease space on the Shoreview tower. Instead, he coughs up the cash for a 1,200 foot tower of his own. Only catch was that it was 40 MILES AWAY IN WISCONSIN!! Multipath city! Dead spots all over the metro! They had to obtain a waiver because it did not city-grade either St. Louis Park (COL) or Eden Prairie (studio location.) 104.1 had a better signal into Eau Claire, Wisconsin than it did in downtown Minneapolis!

Of course, a tower in the middle of nowhere also meant we were reliant on Podunk power cooperative. Whenever any sort of weather disturbance occurred, we were off-the-air. As soon as it started raining or snowing, we always wondered which would fail first: power at the transmitter site, or the 55-mile double STL hop! Lots of fun getting to the site in the winter, too.

Source record: 17916

The fact that they are on Channel 2 cannot help, either. This hurts them in two ways:

1) Since this is the lowest TV frequency, the small built-in antennas ("rabbit ears") are of least efficiency on Channel 2.

2) Also because this is the lowest TV frequency, it is most prone to "skip" signals from several states away. The relatively large distance between the transmitter and most potential viewers will compound this problem by causing the desired (local) signal to be weaker than one that was in San Antonio proper.

The skip problem on Channel 2 can be readilly observed here in Orlando. Our local NBC affilliate (WESH-2) is actually licensed to Daytona Beach. Therefore, it transmits from a tower between Daytona and Orlando. The signal is weaker in most parts of the metro area, compared to the other TV stations. Antennas are pointed NNE to receive WESH. On most summer nights, interference to WESH can be readilly observed from distant skip stations, even on a cable system.

What this thread was about was common ownership of Class As in one city (or metro area in the case of Dallas/Ft. Worth and Minneapolis/St. Paul).

I didn't include Windsor as Canadian Class As do not come under U.S. licensure.

CKLW is a Class II-B station (new Class B), not a Class I-A or Class I-B (new Class A); the real Class I-A is in Juarez, Mexico.

Windsor does, however, have a Class A, on 1550. It is "grandfathered" at only 10 kW DA-N, however, and is CBC-owned.

The fact that they are on Channel 2 cannot help, either. This hurts them in
two ways ...
>>

Three, if you consider the succeptability to man-made noise.

In L.A., Channel 2 was often unusable due to automobile ignition noise. This
effect decreased with Channel 4 and Channel 5, and was completely gone by
Channel 7.

Being a "fringe" station on Channel 2, and attempting to serve two metro areas
with significant automobile traffic is a real crap-shoot ... and the crap one
sees is the ignition interference on the screen.

> system.

...to confirm this, there were several times the last summer I lived in Northeastern Wisconsin (1998) when the ABC affiliate on Channel 2 in Green Bay, WBAY, was wiped out from skip -- received on the cable TV system's Winnebago County antenna site and piped right through to all the subscribers -- from both WESH and CBFT Montreal...

And number 4...

Channel 2 is right on the 1st harmonic of the 27 Mhz Citizens
Band...Not as popular as in 1974, but still used a lot by truckers,
often overmodulated through nasty illegal 100 watt linear
RF amplifiers.

All this stuff was well known by 1950. ABC got Channel 7 for
its network owned stations, because they were certain that the
FCC would delete channels 2 through 6, making ABC the first station
on the dial.

>>

One thing is certain ... the FCC deleted Channel 1.

When I lived in L.A. many moons ago we had a Philco TV set courtesy of my uncle (who was a Philco VP) and it had Channel 1 through 13 on it.

With CBS and NBC early on staking their claims to Channels 2 and 4 (exception: Channel 5 in Chicago; Channel 4 was owned by B&K, which eventually merged with ABC), there was practically no way that Channels 2 through 6 were going to disappear unless the entire service was forced into the UHF band.

...Channel 4 was reallocated to Milwaukee so that WTMJ-TV could move off of 3, with which it was causing interference with Kalamazoo, and still keep a low VHF channel (3 was later reallocated to Madison and Escanaba -- anyone know when 6 and 12 were allocated to Milwaukee?); the properties of WBKB-TV were divided up between CBS (which used the technical equipment and license to start up WBBM-TV on Channel 2) and ABC (which applied the WBKB call sign to the already-operating WENR-TV on Channel 7 and moved into the Balaban & Katz facility at State and Lake)...

I can't say that I agree with you. I live on the far east side of Columbus. With an outdoor antenna I can pick up several, if not most of the Dayton TV stations on a consistent basis. Most of the Dayton transmitters are at least 70 miles away from me. The station that comes in most consistently (and practically on a daily basis) is Channel 2, WDTN.

Ironically, the Dayton station with the best reception when I was growing up was Channel 7 WHIO, which very seldom provides decent reception anymore. I wonder if they changed their facilities since the 1970's or whether this has to do with interference from low power WINJ-LP Channel 8 whose transmitter is located just west of Downtown Columbus (between my home and WHIO.)

>>

Channel 3 moved from Milwaukee to Madison, and became Channel *3 (NCE).

Channel 4 was deleted from Chicago and was reallocated to Milwaukee and Bloomington, Indiana as Channel 4 (no asterisk, hence commercial).

Chicago's Channel 7 used several calls, including WENR-TV and WLS-TV.

WBKB was the deleted Channel 4.

Were it not for the (subsequent) deletion of Channel 4, and the (original) allocation of Channel 13 to Rockford, Illinois, Chicago would have parity with Los Angeles as having all possible VHF channels.

Chicago may have the most Class I-A AMs, but L.A. has the most VHF TVs. Which city, in retrospect, got the better deal?

Correct! In the late 50's TSN in Ft Worth tried to swap Ch 11 for the
not used Ch 2.
Chs 4,5 and 8 had a hissy and the FCC did not approve it.....like they
DID approve a 12/8 swap in New Orleans! Years later the folks at 11
admitted to me they were lucky the swap was not approved! Springtime
skip and extended ground wave is awful!!!

NYC/Secaucus/Newark also has the max number of VHFs. Baltimore/DC also
has 7. In a sense, DFW does as well since WFAA-TV is on 8 and their DTV
is on 9 [2 4 5 8 9 11 13].

Also, channel 2 picks up the most interference such as from lightning
(and other electrical sources).

If channel 3 in Madison was supposed to be an (NCE), it quickly was
changed to commercial, and went on the air after a brief skirmish between
several applicants.

Is this also true of UHF? (I get a reasonable picture on channel 44, poor picture on channel 14 with a VHF-UHF antenna-- both stations have the same power, and broadcast from the same tower)

The lower channels also are much more vulnerable to man-made interference, too. I'm 50+ miles away from the two local VHFs... as soon as I turn my computer on, channel 4 is unwatchable, but channel 9 remains with a near-perfect picture.

Not all of which are commercial.

L.A. still has the maximum number of commercial VHF stations allocated to any
one city ... or any two- or three-city metro area (considering Baltimore/DC as
two-city and NYC/Secaucus/Newark as three-city).

XEB was not, to the best of my knowledge, ever part of the Azc&#65533;rraga
companies. That was XEW, with a close association with XEX and XEQ, owned by
future Azc&#65533;rraga partners in Televisa Miguel Alem&#65533;n and R&#65533;mulo O'Farril. If
you go to the radio photos section on my site, there are some pictures of
the XEB site circa 1963, and this site was the original "El Buen Tono"
location when La B Grande de M&#65533;xico went on the air. It was the first
licensed station in Mexico City.
>
> The TV page caused me to wonder: what's happened to Guillermo

> interesting.

I used to have links to the original patent filing of Gonz&#65533;lez Camarena but
the site seems to have gone away. The mechanical system was more appropriate
for non-braodcast and the invention was in fact used to send pictures of
medical procedures down wire links!

Drew Durigan says,

>> The skip problem on Channel 2 can be readilly observed here in Orlando. Our
>> local NBC affilliate (WESH-2) is actually licensed to Daytona Beach.
>> Therefore, it transmits from a tower between Daytona and Orlando.

It's been over three years since I drove to Florida and did the drive from
Jacksonville to Orlando, but I recall Orlando being well over an hour away
from Daytona. I'm surprised this works. Perhaps I shouldn't be; Florida is
flat. But still...

> Not all of which are commercial.

Runner up metropolitan areas with six each (that I'm aware of):

Dallas-Fort Worth (2, 4, 5, 8, 11, 13)

Seattle-Tacoma (4, 5, 7, 9, 11, 13)

Boise, ID (2, 4, 6, 7, 9, 12)

Anchorage, AK (2, 4, 5, 7, 11, 13)

I think that Honolulu also has at least six V's.

> certainly snapped up the channel if any such allocation actually was made...

I can remember watching WTMJ's switch from channel 3 to channel 4 live, when I was a kid. They made a big deal about it on the air when they pulled the switch. I think it was more like about 3 years at the most between the time WTMJ switched to channel 4, and WISC-TV went on the air on channel 3, but I was just a kid at the time and wasn't keeping a record of the exact dates. I think it was probably 1953, or possibly 54 when WTMJ moved to channel 4, and I am pretty sure that WISC-TV came on in 56.

I am also pretty sure that WHA-TV on channel 21 was Madison's third TV station, not the second. I can remember channel 27 and channel 33 both coming on the air at about the same time, with WHA-TV coming along a year or two later. I think 27 and 33 were racing to see who could get on the air first, although I can't remember anymore which one was first. The bricks and mortar for both went up at the same time, but I think one experienced a slight delay for some reason. As I remember it, both WIBA radio and WISC radio, as well as possibly others I didn't know about, were battling over channel 3, WISC obviously won. I remember at the time many local people thought that channel 3 should have been given to WHA as an (NCE) channel, with WISC, or whoever, going on UHF like the other two commercial stations, to give a level playing field.

We had a weird situation in Boston in the 1950s. Channel 4 was WBZ-TV (Westinghouse, and an NBC affiliate at the time) and Channel 7 was WNAC-TV (RKO General, and a primary CBS affiliate, but they carried ABC and DuMont programming as well). The third VHF station was/is WGBH-TV, channel 2 - a non-comm/PBS standard bearer.

For some reason, and perhaps someone can fill me in on this - the next commercial station in Boston wound up on channel 56 - WTAO-TV - and of course, in the 1950s, it failed. After that point in time, WHDH-TV (Herald-Traveler Corporation), was awarded channel 5. It had primary ABC affiliation, but carried a lot of CBS and NBC programming that the other two stations declined to carry. Affiliates could stand up to the networks that way in those days.

Had they allowed WTAO-TV to apply for channel 5, it would have survived. And ABC might have obtained a stronger foothold in the Boston market a few years earlier, because, for the most part, Boston viewers didn't get to see very much ABC programming until 1958.

The tower is near Orange City, FL, which is close to 40 miles north of downtown
Orlando. It works, but not nearly as well as the Bithlo site (just east of
Orlando) which is home to all the other TV stations.

BTW, in case you're wondering, WESH is prevented from moving to the Bithlo site
not only because it has Daytona Beach as a COL...but also because it would be
too close to Channel 2 in Miami.

About once a decade people look around and realize that radio can't go on much longer as it is at that moment and declare it dead. Some of those people have caused a great deal of trouble for companies like RCA in the '50s and Westinghouse in the '70s.

Some are starting to look around the business right now and make those same noises. No radio as you know it right now is likely not to exist in a decade but radio will continue to exist in some form or other long past that point, be it delivered straight from a satellite to your radio, through a cable or along some medium or frequency we haven't thought of yet.

Tim King

...when the Wisconsin edition of TV Guide expanded its listings to include the Madison market in the Summer of 1954, all three stations then on the air -- WKOW-TV 27 (the first, then a CBS affiliate), WMTV 33 (the second commercial station, picking up affiliations with NBC, ABC and the crumbling Du Mont network) and WHA-TV 21 -- were listed...perhaps you're confusing WHA-TV's sign-on with WMTV's switch from Channel 33 to Channel 15, which did occur a couple of years later...

>>

And that hotly contested allocation was ultimately challenged and overturned,
due to alleged bribery by the Herald-Traveler Corporation, thereby resulting in
WCVB/5, and a quick profit of about a half-billion dollars to the successful
challengers, one of which was a principal at Bolt, Beranek and Newman.

Incredibly, the Herald-Traveler Corporation didn't also loose WHDH/850.

Can't be so Ray. Gene Cagle and KFJZ knew in 1958 when they applied to
make 11 the educational channel and switch 2 to commercial. They
offered to GIVE any educational institution the CH 11 RF facilities in
the deal but the FCC would not buy it! KFJZ argued that 11 would work
in a wider area in and around north Texas but 2 was locked in to DFW.
4,5 and 8 pitched a hissy and they had more pull with the FCC than
Cagle, Sid Richardson and John Connely had (at that time) By 1961 when
LBJ was in position to help them, they realized that 2 was NOT the way
to go. ... and that 11 was a better channel.

A lot of people did not like Gene Cagle but I really did. He was very
kind to me. I will always be greatful to him

MF

Actually, it wasn't "discovered" by a student. Numerous entities had applied
for the frequency when it was allocated in 1950. There were legal battles over
the channel for years. As I recall, in the early 80's, the folks at KERA's
parent, North Texas Public Broadcasting, finally got involved. By 1985, NTPB
had worked out a deal with the remaining applicants.
Despite numerous financial and technical problems, the station when on the air
as KDTN in August of 1988. NTPB uses KDTN for educational programs and KERA for
entertainment programming. It's all run out of the same building in Dallas.
Both transmitters are at the DFW antenna farm in Cedar Hill, TX. KDTN has some
kind of studio in Denton at either UNT or TWU.

> from Channel 33 to Channel 15, which did occur a couple of years later...

No, I'm not confusing WHA-TV's sign-on with WMTV's switch from Channel 33 to Channel 15. What I said was that WHA-TV was Madison's third station, not the second as you claimed. I also said that WHA-TV came on a year or two after 27 and 33. I think this is also correct, with WKOW & WMTV signing on in 1953, and WHA-TV a year later in 1954.

Re the move of WMTV from channel 33 to channel 15, after the move, channel 33 became a second (NCE) allocation for Madison, but nothing ever came of it, and it eventually disappeared from the table of allocations. The engineering staff at WHA-TV did hang onto their old transmitter, with the idea that they might put it on channel 33 some day, but the cavities eventually disappeared, to repair WKOW-TV's transmitter.

I'm not so sure Madison's Channel 3 was ever a * (NCE). If it was, the channel was never used as such. In Madison, Channel 3 has always been CBS, while Channel 21 is their PBS station. I saw both stations sign on when I lived in Southern Wisconsin.

Madison was one of those "mixed" markets (one VHF and several UHF allocations), which an attempt was made to get changed to all UHF, but failed. Rockford is another. I believe Bakersfield and Fort Wayne are two which did make the swap.

IT (the tower) still is. Site of a great 2-meter HAM repeater and other communications antennas. As it's only 900+ feet, it's pretty evident that the site could not cover both SA and Austin.

IN FACT IN THAT STUDENT"S RESEARCH , THE ALLOCATION FOR CH 2 IN DENTON
WAS 'FORGOTTEN' IN THE MID TO LATE 60"S. IT WASN"T UNTIL HE HEARD
STORIES (WHICH MAY BE WHAT INFORMATION YOU HAVE MILTON) THAT HE DECIDED
TO LOOK INTO IT. THIS WAS BROUGHT TO THE ATTENTION OF DR. RICHIE MEYER
AT KERA. HE (DR. MEYER) DIDNOT WANT KERA TO HAVE A COMPETITOR FOR
LISTENER DONATIONS. SO KERA FILED FOR THE LICENSE ALONG WITH A FEW
GROUPS BASED IN DENTON. FINALLY AN ACCORD WAS REACHED WITH ONE DENTON
GROUP THAT KTDN WOULD BE CO-MANAGED WITH THE UNIV. OF N. TEXAS, BUT
PROGRAMMED BY KERA. ALSO DR. MEYER AND HIS WIFE SUSAN HARMON (GM OF
KERA-FM) WOULD TEACH SOME RTF COURSES AT UNT AS PART OF THE AGREEMENT.

Well, as far as I recall, the newspaper had been losing money for years and the corporation was apparently surviving on the profits from the TV station.

Have to admit, that WHDH-TV was a hell of a station. For a long time it was the only station in Boston that was local color-capable. They had some pretty radical changes in children's programming - where Captain Bob Cottle and Frank Avruch brought the standards higher than what was being offered on the other two stations. They were the first in Boston to experiment with a magazine program ("Dateline Boston") and we finally had a chance to see some quality network programming that the rest of the country saw, but that WBZ and WNAC wouldn't broadcast.

They took to broadcasting a lot of Red Sox and Celtics games, and also were leaders in broadcasting other sports. They seemed to spare no expense on the news broadcasts, easily trumping the other two stations.

Regardless as to how and why the license was lost, the old WHDH-TV was a driving force by giving us a caliber of programming we weren't used to seeing, and we wound up demanding it from the other stations in town. I even stayed up on the last night in 1973 (or 72?) to hear an announcer's voice cracking, while he slowly said, for the last time - "WHDH-TV, channel 5, Boston" just before midnight. It had only been around for 15 years or so, but it was like losing an old familiar friend.

Bloomington used to be on channel 10 - the move to channel 4 would have made things *worse* for skip. (skip does happen on channel 10, but it's incredibly rare - maybe once every 3 years?) In my experience, moving from channel 3 to channel 4 wouldn't be much of an improvement. Moving from channel 3 to channel 8 (possibly still available in Milwaukee at the time, as Grand Rapids was originally on channel 7) would have helped.

My suspicion is the 3=>4 move in Milwaukee was made specifically to make channel 3 in Madison possible. Channel 3 was the last station on the air in Madison. (until WMSN-47 came along in the 1980s) I used to work there, and it was long rumored some kind of political skullduggery was involved in the channel assignment.

==========

I've been telling my fellow TV DXers in the WTFDA (http://www.anarc.org/wtfda) that KBEJ-2 was going to be a pest, and that's promptly proven true. I saw them testing a few days before their regular air date. (color bars with a KVUE-24 Austin ID!) Another DXer 120 miles southeast of here in Chattanooga has already seen KBEJ three times. I have also seen Houston channel 2 on *tropospheric* propagation, and channel 4 in Harlingen - the Gulf Tropo isn't going to be good to KBEJ either.

I suppose as long as they're on cable they don't care.

It should be noted that KBEJ is not going to be the last new low-band NTSC operation. Channels 3 and 6 in Ely, Nevada have recently been authorized (both to the same licensee if I remember properly!), along with channel 3 in Douglas, Arizona and channel 5 in Sun Valley, Idaho.

> air first, although I can't remember anymore which one was first.

WKOW-27 started on June 30, 1953; WMTV-33 (now 15) started on July 8.
WHA-21's signon date is listed as May 3, 1954 - one of the first
educational stations in the U.S., but not the second station in
Madison.

> experienced a slight delay for some reason. As I remember it, both WIBA
> radio and WISC radio, as well as possibly others I didn't know about, were

I was always told (when working at WISC from 1979 through 1990) that
WIBA was the only other competitor for channel 3 - and it was a fierce
competition.

Channel 9 was allocated to Santa Fe but reserved educational. I don't
see any active applications/permits so I presume the allocation will die
with the DTV conversion.

Fort Wayne never had a VHF, but Bakersfield did. So did Fresno. I
believe those are the only two markets where operating VHF stations were
forced to move to UHF. Channels 6 and 12 were allocated to Peoria,
Illinois and eventually deleted in favor of channels 25 and 31, but no
stations ever operated on the VHF channels there.

That I can believe! Forgot about Kalamazoo - the way WOOD-8 bombs into
my boyhood home in Waukesha County, it's hard to imagine anything
co-existing on channel 3 with WKZO. I'll bet WMVS-DT channel 8 is going
to regret that assignment...

> (3 was later reallocated to Madison and Escanaba -- anyone know when 6 and 12 were
> allocated to Milwaukee?); the properties of WBKB-TV were divided up between CBS

Channel 12 was one of the original 1952 allocations. Channel 6 was
originally allocated to Green Bay - either the allocation was changed
before May of 1955 when WFRV went on the air, or WFRV started on channel
6 and later moved to 5.

Another question for the techies:

Why are there only Ch 4 & 5 co-located combos in cities. Why aren't there
any Channel 2 & 3, 3 & 4, and 5 & 6 combinations in any market. Is there
something special about the 4 & 5 frequency that allows this to occur?

There are if one is NTSC and one ATSC.

> Is there
> something special about the 4 & 5 frequency that allows this to occur?

Yes. They are not adjacent frequencies. There is what used to be,
and perhaps still is, the taxi band in between.

You can work this out ... Channel 2 starts at 54 going to 60, 3 at 60,
going to 66. 4 goes from 66 to 72.

Channel 6 ends at 88 from 82. 5 is 76 to 82.

That leaves the gap at 72 to 76.

Just for the record, here are the pre-freeze FCC section 3.606 allocations
for the Madison, Wisconsin TV thread:
Madison (9)
Milwaukee (3) (6) (8) (10)
Chicago (2) (4) (7) (9) (11) (13)
Rockford (12)
Grand Rapids (7) (9)
Kalamazoo (3)
Did WLAV-TV Grand Rapids operate on channel (7) prior to the freeze?

That station is now an gospel station. The studios were sold to a church, with the tower site, but the church did not want the station. The tower still sits on the land just south of Thomasville on the right. The station was dark for a while, then the license was bought and the tower site moved closer to the Florida line. The studio is a trailer with one room with a Rohn 25 tower sitting next to it.

MTV made such a big deal about giving away the station, but at the time, the transmitter would not stay on for more than a week at a time. Lightning had reduced the plate transformer to a big lump of tar and copper, and it was rigged to go on the air just enough to keep the license. The winner took the $10,000 instead.

Peter sez:

> Channel 3 moved from Milwaukee to Madison, and became Channel *3 (NCE).

...there was a span of about five years between WTMJ-TV moving from 3 to 4 and
WISC-TV appearing on 3. And I doubt seriously that 3 was allocated as a
non-commercial at any time, since WHA-TV, the University of Wisconsin's station on
Channel 21, was Madison's second TV station, on-air in 1954, and would have
certainly snapped up the channel if any such allocation actually was made...

And to make things confusing, there are only two UPN affiliates on
channel 2. One is KBEJ; the other is XHRIO - in adjacent markets...

In fact, it was rumored the freeze resulted when President Truman wanted
to watch a program on WNBW and was unable to due to interference from
WGAL. The development of channel offsets also dates to this period.
(they had been experimenting with other means of alleviating
interference, including attempts to use a receiving station in New
Jersey to synchronize WNBW's and WNBC's carriers.)

> Wilmington, Delaware WDEL-TV. My list of pre-freeze assignments comes from

> Doug's website.

I'd love to see it and will certainly open some space!

I have a copy of the 1952 post-freeze table; I had thought that was the
first format assignment table. (I'd figured that, like AM, before 1952
TV channels had been assigned on a first-come, first-served basis)

There are some assignments on channel 37 and on channels 70-83 in that
table, but not a whole lot of them. Channels 71 in Muncie and 73 in Bay
City are the only two above 69 in that region - it looks to me like they
were trying to avoid assigning higher channels when possible.

When did they move to Bithlo? I first came to Orlando in April, 1972, at the ripe old age of 7. Family vacation to (then new) Disney World, ya know!

Even at 7, I was very much a radio and DX'ing geek. We stayed at the Hilton and I swear I remember looking at the roof and seeing a TV antenna pointed NW (towards WDBO's studio site on John Young), not E. towards Bithlo.

I recently read an interview with radio legend Jim Cutler which put this entire subject into context for me after I'd been doing it for 15 years.

To paraphrase ...

"You have the music which the station is built around, you have the jocks that inform you about the music, and you have the imaging/positioning which excites you about the music."

When you look at it that way, it all becomes pretty simple doesn't it?

3690. [WILL-AM-FM-TV] Assistant Director for Technology -- repost

Newsgroup: rec.radio.broadcasting
Date: 2000-08-16 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <3997386b.172207445@news.cso.uiuc.edu>
Source record: 17864
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

ASSISTANT DIRECTOR FOR TECHNOLOGY

WILL-AM-FM-TV, the public broadcasting stations of the University of Illinois are looking for a very special person:

You have at least five years' experience in broadcast engineering (radio, television, or both). You have a four-year college degree (probably an EE or similar, and you feel secure with computer systems and digital communications applications), and you are still interested in learning. The quality of your work is important to you, and you take pride in what you have accomplished and in your potential for the future. You'd enjoy working in a new broadcasting facility housing both radio and television. You want to work in a progressive organization that respects and values its people, and which will encourage your growth, both as a professional and as a person. You want to grow into an engineering management position with stability, a salary of not less than $50,000, and really great benefits. You'd enjoy living in a college town with a strong advanced technology element, many cultural, sports, and entertainment opportunities, and a high quality of life.

If you are the broadcast engineer we are looking for, we will:
* Start you as assistant director for technology, initially working in the area in which you have the strongest background, supervising six engineers and a team of operators.

* Help you to learn from experienced people even more about AM, FM, and TV broadcast technology, directional AM antenna systems, digital television, digital audio production,internet transmission, and more.

* Teach you the leadership skills that will enable you to function effectively as a key member of our management team and as a part of an organization with a special and successful style.

* Encourage you to interact with professional colleagues at the state and national level, sharing your own expertise and learning from others.

* Put you in a position to assume full responsibility in the future for the technical operations of this 78-year-old AM-FM-TV combination which is still growing.

Call or write for complete information about this position and for a full application package. Direct your inquiry to:

Ms. Marge Moluf
WILL-AM-FM-TV
Campbell Hall for Public Telecommunications
300 N. Goodwin Avenue
Urbana, IL 61801
217-333-0850
E-mail: m-moluf@uiuc.edu

For full consideration, apply before September 15, 2000
The University of Illinois is an equal opportunity employer.

3693. Reposting [WILL-TV] Station Manager position open

Newsgroup: rec.radio.broadcasting
Date: 2000-08-16 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <399737c7.172043244@news.cso.uiuc.edu>
Source record: 17867
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

STATION MANAGER, WILL-TV
University of Illinois at Urbana-Champaign

THE EMPLOYER: The Division of Broadcasting of the University of Illinois operates public radio and television stations serving much of Illinois and half of Indiana. WILL-TV has been on the air since 1955, and is the local PBS affiliate. WILL-AM, on the air since 1922, is an all-news/information service. WILL-FM, which began in 1941, serves 18,000 square miles with 105,000 watts, and is the most powerful station in Illinois. The Division of Broadcasting is housed in a housed in a new broadcasting facility, and is committed to a policy of encouraging the growth and development of its employees. Although results are important, the working environment is friendly, collegial, and mutually supportive.

THE LOCATION: The University of Illinois is located in the two adjacent cities of Urbana and Champaign, Illinois, which offer the advantages of medium-sized city living (110,000 population), with easy proximity to Chicago (135 miles), St. Louis (175 miles), and Indianapolis (120 miles). The university setting (35,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a full-time, academic-professional position. The Manager of WILL-TV is responsible for all day-to-day activities and operations of the station. He/She reports to the Director of Broadcasting and is a member of the Executive Committee, which involves participation in development of policy at the Division level as well as the usual planning, personnel management and budgeting activities of a station manager. A carefully articulated mission statement guides activities. There are substantial opportunities for personal and professional growth in a stimulating environment-as well as challenges and aspirations, which will both encourage and test that growth.

DESIRED QUALIFICATIONS: A baccalaureate degree is required; a graduate degree is preferred. We seek a person with not less than seven years experience in television broadcasting, not less than three of which is managerial in character. Knowledge of the structure of public and commercial broadcasting is essential, as is the ability to work with PBS, APTS, CPB, other public broadcasting stations, and professionals in the field. The candidate must be a person who has the respect of colleagues at other stations and the ability to represent this licensee well in the national discussion about the future development of the system. Leadership ability, good communication skills, a sense of commitment to the mission of public broadcasting, and an understanding of the role of public television in the context of a university environment are all essential.

SALARY & BENEFITS: A starting salary of not less than $75,000 plus a very generous benefits package-including one month of vacation annually, health insurance, life insurance, disability insurance, choice of three retirement options with an employer contribution, sick leave, opportunities for advanced education, and opportunities for professional growth. The WILL stations offer exceptional employment stability to staff members who conscientiously help us meet our goals, maintain the quality of operations, and accept the responsibilities of our Character and Aspirations Statement.

TO APPLY: Send a complete resume with the names of three professional references to the address below. Receipt of applications will be acknowledged, and should be received by September 15, 2000 for full consideration. The position will be available as soon as possible following a decision by the search committee. Applicants are strongly encouraged to request a packet containing further information before applying. The information packet is available from (and applications should be sent to):

Ms. Marge Moluf
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue
Urbana, IL 61801-2316
Telephone: 217-333-0850
Email: m-moluf@uiuc.edu

Northeast

Chad Sobias, half of the "Extreme Morning Sickness" show on Alternative/WEJE (96.3fm, Churubusco) departs for nights at Alternative/WEDJ (107.1fm, Danville). Back at "Extreme 96.3", morning producer Buster Meyer joins J.J. Fabini on the air, in the interim.

>From the Accuracy Department: We noted in our 3 June issue that Dick McBroom's Maumee Valley Broadcasting has a CP for a 93.9fm in Van Wert, Ohio. We noticed in the FCC filings that it's been sold (along with his other stations, we believe in a seperate transaction [WNDH, WONW, and WZOM]), to Clear Channel.

Great Lakes Community Broadcasting, Inc. files a petition for reconsideration with the FCC for 88.7A, licensed to Kinderhook Township, Michigan (near Angola).

Northcentral

Pat Redd exits as OM of Rock/WAOR (95.3fm, Niles, Michigan) for the Promotion Director gig at the Clear Channel stations in Albany, New York (WABT, WGY, WHRL, WRVE, and WXCR).

Central

Charlie Morgan, Interim VP/Market Manager for Susquehanna's Indianapolis properties (WFMS, WGLD, WGRL) removes the "Interim" from his title. Replacing Morgan as VP/GM at Oldies/WGLD is WGLD VP/Marketing Manager Jennifer Skjodt.

Westcentral

Rock/WZZQ-AM (1230am, Terre Haute) flips calls to WBUZ-AM. Sister station WZZQ-FM retains its calls. They are still simulcasting.

Religious/WAPC (91.9fm, Terre Haute) is now running 6000 watts, up from 1000 watts.

The Family Worship Center translator application for 91.7fm in Shelburn is granted, as W219CS-CP.

Southeast

Cox VP/GM Brent Millar exits. Among the Louisville, Kentucky stations he was in charge of is WSFR (107.7fm, Corydon)

Devon Marsh exits as PD of WIKI (95.3fm, Carrollton, Kentucky), WJCP (92.7fm, Austin) and WWWY (104.9fm, Columbus). New PD at WWWY is Gil

Nailey, formerly of WKKG (101.5fm, Columbus) and WHKW (98.9fm, Salen) [Now WZTR].

An LPFM application by "Advanced Search and Rescue" for 107.3fm in the town of English has been filed.

Southcentral

Country/WMCB-AM & WCBK-FM (1540am, 102.3fm, both Martinsville) add "Rise Up", a new syndicated show from SuperRadio. "Rise Up" is hosted by John Ritter, morning man at WRBQ in Tampa, Florida.

Southwest

Brill Media's CHR/WSTO (96.1fm, Owensboro, Kentucky) morning co-host Kami Boyd heads to South Central Communications' AC/WIKY (104.1fm, Evansville) to do mornings, solo.

Country/WRAY-AM & FM (1250am, 98.1fm, both Princeton) add "Rise Up", a new syndicated show from SuperRadio. "Rise Up" is hosted by John Ritter, morning man at WRBQ in Tampa, Florida.

Family Worship Center Church appears to have W211BJ (90.1fm, Crossville, Illinois) on the air. They've filed for the License to Cover with the FCC. W211BJ translates WJFM in Baton Rouge, Louisiana.

That's all for this issue. See you in two weeks!

You are probably referring to the former Lodestar Towers site in Orange City (now owned by SpectraSite). Contact Steve Sirignano at SpectraSite for more information. They are located in Tequesta, Florida. Phone: 561-748-9300.

There is an Alan Dick panel antenna for 3 or 4 FM's there plus a TV station (religious station I think - Trinity or something..?) Some of the stations also have side-mounted standby antennas on the same tower.

Good luck.

James,

>1) KZPS does not have a "true" >competitor in the DALLAS-FT >WORTH market.
>There is not another station with a >classic rock format,thus KZPS truly
>doesn't have to share its listeners.

True.

>2) Why is it,no matter what time of >the day, everytime i tune in your
>station, I hear "worn out" cuts of >either Heart,Dire Straits, or >Boston,
>within a few minutes?

Because we're dependable and consistent. You get what you come for when you tune in--great classic rock.. These artists/songs may be "worn out" to you (and that's OK), but it's what the bulk of our audience desires, so we give to 'em

>3) When you have a "40 minute uninterupted music sweep", you interupt it
>with liners,promos etc?

We don't do "40 minute" positioning. We DO have 20 song classic rock marathons, and don't play commercials or promos during those sweeps. We do very short talk breaks and sweepers to ID the station. It's a very clean presentation.

>4) Finally,when are you going to >steer away from the "top 40" >classic
>worn out hits", and play classic >rock from Quick silver messenger
>service,Cream,Spirit,and Yes A >better Selection of Springsteen,

Familiarity is key to the success of this format. We play what works for us and what our audience wants. If you are in this business, you know the concept of audience research. We play all of the artists you mentioned above based on audience response. I'd be happy to discuss this with you anytime...my office is 972-770-7718

>or is the
>AMFM/Clear Channel Consultant not allowing you to be a PD?

No, but they're letting me be the APD! The PD is John Larson.

> TV channels had been assigned on a first-come, first-served basis)

There is a table of Television allocations for the "first 140 metropolitan districts" in sections 3.601 through 3.606 of the Federal Communications Commission Rules Governing Radio Broadcast Services, Effective June 25, 1940, Revised to January 16, 1948.

In this 1948 table, Chicago is allocated channels 2,4,5,7,9,11,&13, for a total of 7 VHF allocations. Milwaukee has 4 allocations on channels 3,6,8,&1. Madison had one allocation on channel 9. I suspect the channel "1" at the end of the Milwaukee listing is a typo, as it is both out of numerical sequence, and is the only listing for channel "1" in the entire table. I assume it should be channel 10, or maybe 12.

I will try to scan these pages in the next couple of days, for those who would like to see what the Television table of allocations looked like in 1948.

Regards,

John Byrns

And in Grand Rapids too. But the distance separations weren't as great
in the early assignments. They also had channel 4's in NYC,
Schenectady, and Lancaster PA. As you might guess, serious interference
ensued, hence the freeze...

There were several close spaced assignments prior to the freeze. Channel (9) in both Chicago and Madison is not unusual when you consider the channel (4) situation in Lancaster, PA and Washington D.C that caused the lawmakers to notice something was wrong, when their suburban reception of WNBW was full of co-channel bars from WGAL-TV. Another big mess was channel (4) with WWJ-TV in Detroit and WNBK in Cleveland (later moved to channel (3)). There are many others, including channel (7) being assigned to both New York City WJZ-TV and Wilmington, Delaware WDEL-TV. My list of pre-freeze assignments comes from the government laden appendix of the first post war edition of the book "TV Installation Techniques" by Samuel Marshall. It sites several FCC rules including the original assignments (FCC table 1, section 3.06) (and by the way, has a large chapter on dealing with co-channel reception problems, wonder why).
I do not have a photo scanner, but would be happy to transcribe the list for Doug's website.
BTW, included is a list of the original channel (1) assignments! Staying in the Madison area, channel (1) was assigned to Racine, WI and South Bend, IN.

> --

That was Bithlo. I remember when it cam down. Lost the ABC and CBS stations
(WFTV and WDBO / now WKMG) the local PBS and about a half a dozen FM stations.

WDBO was back on pretty quick as they still had their old tower and transmitter
at the studio site. But it was very plain that it had not been used for
quite sometime as the picture had heavy hum bars in it. I do not know if they
repaired the transmitter or that the electrolictics fianally reformed, but
the hum bars did slowy dissapear.

I cannot remember how long it took to get a new tower up at the Bithlo site.
But it was quite a long time.

> --

Yes.

There's a space between channels 4 and 5. Channel 4's upper reach is
71.75, channel 5's lower is 77.25 mhz. So in essence there's enough of
a space so channels 4 and 5 don't interfere with each other.

Some other notes from a layman -

Some VHF stations were moved in the post-freeze period so as to better
take advantage of the available spectrum a) to avoid interference with
other stations that really weren't all that far away and b) if a few
stations were moved around, they could fit more stations in the band.
For instance, WJAR-TV was moved from channel 11 to channel 10 - this
opened up channel 12 for use in the Providence area, eliminated
interference with channel 11 from New York, and also cleared the way for
WENH-TV to open up on channel 11 in Durham, NH.

A lot of the early UHF stations were on higher channels and later moved
down the dial - for instance WHYN-TV, channel 40 in Springfield, Mass.
began life on channel 55. I think one of the other UHF stations in the
area began on channel 61 and moved down to channel 22. Reasons - 1)
higher power on the channels way up at the top of the band wasn't
practical with the primitive transmitters of the 1950s and 2) x amount
of watts on channel 22 gets you further than it does on channel 61.
Which is, I'm told, one of the reasons that channels 70-83 were
eventually dedicated to low-power, short range translator TV stations.
Reviews of various web pages on the internet show that a handful of
full-power stations actually operated up above channel 70, but they
didn't stay there very long.

Evem though that spectrum (ch 70-83) has been reassigned to cellular
phone and other use, there may still be a few straggler translator TV
stations up there - do a check on the FCC's TV station Database with
W70, W71, W72, ..., W83 or K70, K71, K72, ..., K83 and you'll see a
handful, mostly in New Mexico, Virginia, Minnesota, Texas, and
California. Whether they're still actually running or not is anyone's
guess.

The last one *known* to be operating was channel 70 in Herington,
Kansas, seen by a DXer in 1997. As you note, a handful (about three
dozen) are still licensed & may still be operating but are in such
isolated places that no DXer has seen them. I know of one in Oregon
that still holds a K71 call but is actually operating on channel
60-something.

It doesn't help that new TVs haven't tuned above channel 69 in many
years.

Also, the FCC (and Congress) continue to frown on swapping VHF
non-commercial assignments for UHF commercial ones. (note a few
attempts by WEDU-3 and WTOG-44 in the Tampa Bay area to swap channels)

doug smith quotes me 'n sez:

> > (3 was later reallocated to Madison and Escanaba -- anyone know when 6 and 12 were
> > allocated to Milwaukee?)
>
> Channel 12 was one of the original 1952 allocations. Channel 6 was
> originally allocated to Green Bay - either the allocation was changed
> before May of 1955 when WFRV went on the air, or WFRV started on channel
> 6 and later moved to 5.

...no; actually, WFRV was created out of the remnants of the old WNAM-TV Neenah-Menasha on Channel 42...someone at WOSH Oshkosh tried to tell me years ago that WMBV Channel 11 Marinette (now WLUK Green Bay) was started up out of the equipment that had previously been used for WOSH-TV Channel 48, but Oshkosh to Marinette is a little too far to easily believe, as opposed to Neenah-Menasha to Green Bay...

...I was also interested to see that Channel 34, where KFIZ-TV in Fond du Lac was for several years in the late '60s and early '70s, is no longer allocated to that city -- Channel 34 in that area is now a TBN LP in Oshkosh...

Drew, I visited that tower site last November, and it was plainly
marked as WESH's transmitter facility, but about 1 mile to the southwest
is another one of those 1800' sticks with a boatload of FM radiators.
Got any idea who owns that one.
There used to be a 2000' stick near Orlando that fell in the 70's killing a
tower crew (or part of one). Is that where the Bithlo site is today or was
it the Orange City site (or neither)?

Thank you Jay for responding. I live out of the Dallas-Ft Worth Area, but I have some good friends who work at KZPS. I tune in every once in awhile when I'm in town. They have been critical of the station because of its' "stagnation" in music cuts and ratings. So allow me to rebuttal what you said:

Because we're dependable and consistent. You get what you come for when you tune in--great classic rock.(IF IT IS CONSTANT REPETITION, ALMOST TO THE POINT OF SAME DATE AND TIME , IT'S NOT "GREAT"). These artists/songs may be "worn out" to you (and that's OK), (NOT REALLY OKAY, THINK ABOUT IT. IF I NOTICE THE SAME OLD STUFF, I'M SURE ANOTHER LISTENER NOTICES AND GROWS TIRED< THUS GOING ELSEWHERE) but it's what the bulk of our audience desires, so we give to 'em(NO, IT'S WHAT AM-FM /CLEAR CHANNEL DECIDES BASED ON THEIR RESEARCH , MOST LIKELY "OUT OF THE DALLAS-FT WORTH MARKET")
3) When you have a "40 minute uninterupted music sweep", you interupt it with liners,promos etc?
We don't do "40 minute" positioning. We DO have 20 song classic rock marathons, and don't play commercials or promos during those sweeps. We do very short talk breaks and sweepers to ID the station. It's a very clean presentation.(OK I STAND CORRECTED. 20 SONG CLASSIC ROCK MARATHON. HOWEVER AFTER TWO SONGS PLAY, THERE IS A TALK BREAK THAT COMES ACROSS AS TALK FOR THE SAKE OF TALKING, AND IT IS LENGTHY. THAT IS AN INTERUPTION NO MATTER HOW YOU SLICE IT, AS FAR AS "CLEAN", I DON'T THINK SO, AS MOST OF THE ON AIR STAFF IS STRUGGLING ON WHAT TO SAY.)
4) Finally,when are you going to >steer away from the "top 40" >classic worn out hits", and play classic >rock from Quick silver messenger service,Cream,Spirit,and Yes A >better Selection of Springsteen,
Familiarity is key to the success of this format. We play what works for us and what our audience wants. (I HAVE SEEN ARTICLES IN YOUR LOCAL PAPERS STATING THAT YOUR AUDIENCE WANTS DIVERSITY IN THE CUTS AND ARTISTS YOU PLAY) (FAMILARITY, YES BUT LESS REPETITION WOULD GO A LONG WAY) If you are in this business, you know the concept of audience research. We play all of the artists you mentioned above based on audience response.(SEE ABOVE) I'd be happy to discuss this with you anytime...my office is 972-770-7718
or is the
AMFM/Clear Channel Consultant not allowing you to be a PD?
No, but they're letting me be the APD! The PD is John Larson.(OK APD, BUT ARE THEY ALLOWING YOU TO PROGRAM FOR DFW AND NOT JUST ANOTHER "COOKIE CUTTER"?) (JUST CRITICIZING THE STATION NOT YOU.)
Jay Philpott

As I recal, they where on the Bithlo tower just before it came down. That
stick was not up very long before that happened. A couple of years at most.

I was living in Chuluota at the time. Not withing spitting distance of
the tower, but real close. Can you imagine my supprise when all of a sudden
those nice clear pictures on my TV went away. All at once.

But yes at that time they where on the Bithlo tower. Now I am not sure
where their transmitting facilities are, as ownership etc has change.
Acouple times, I think. BTW I was in Orlando area from 1971 on.

On a similar not, when I was living down in Naples. The local cablevison
tower came down. Afriend of mine and I went to the old site to see it, a few
years after. There it was. Nothing but a bunch of bent a twisted mettal.
Not one straight section. It is amazing what gravity can do.

Chris

Bill Hale <phantom2@eaze.net> writes:

>Madison was one of those "mixed" markets (one VHF and several UHF allocations),
>which an attempt was made to get changed to all UHF, but failed. Rockford is
>another. I believe Bakersfield and Fort Wayne are two which did make the swap.

Bakersfield, yes -- KERO-TV moved from 10 to 23 in 1961, joining the
other two UHFs on 17 and 29.

Fort Wayne has always been all-UHF, part of a small group of all-U
communities that includes South Bend, Peoria, Rockford, Scranton,
and Washington State's Tri-Cities area.

The other market that was "de-intermixed" in 1961 was Fresno, where
KFRE-TV moved from 12 to 24 to join existing Us on 30 and 47.

[There was a proposal floated at the time to de-intermix the
Albany market as well, by moving WRGB Channel 6 to 47, joining
existing Us on 35 and 41, but instead the Us were moved to VHF
on 13 and 10, respectively.]

I remember scanning the TV channels in 1972: WESH/2, WDBO/6, WFTV/9, and
WFME/24. That was it. Channel 24 barely came in because the antenna was only
hooked up to the VHF set of screw terminals, back in these pre-cable days.

Great chance to DX, though, without all the usual interference & intermod!

BTW, we're neighbors. I'm just south of SR 50 & Woodbury. I'd imagine Chuluota (and this entire area) looked a whole lot different back in 1971!

Forgot about channel 13 -- oops!

The all-UHF markets were always intended more as an experiment (in most
cases, one V could have been allocated to each) than anything else; one
of the FCC's ideas at the time was that *all* TV in the US would eventually
move to the equal footing of UHF. CBS, famously, was so certain this would
happen that it passed up several opportunities to buy major-market VHF
properties at bargain prices in the late forties and had to spend
much bigger bucks a few years later to make up the gap.

3728. Hunter Hancock is back after 32 years in retirement! on the Rock-it online

Newsgroup: rec.radio.broadcasting
Date: 2000-08-17 00:00:00 UTC
From: Benton Owsley <rockitradio@earthlink.net>
Message-ID: <9f_m5.5291$2l4.135384@newsread2.prod.itd.earthlink.net>
Source record: 17890
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Hello everyone,
We are proud to state that we have 2 very significant shows that are now available on the Rock-it --- Shows #196 & #197. Here is the rundown of these 2 very historic shows....
********** Rock-it Radio show #197 **********
On the next Memory Lane Show, host Lane Quigley steps aside and turns over the microphone in Studio B to one of the most famous disk jockeys from the 1950's.

The Memory Lane Show and Rockitradio are honored to present the Legendary HUNTER HANCOCK as Guest Host on Show #197.

Hunter Hancock was the first disk jockey anywhere to play Rhythm & Blues on the radio. Starting in June of 1948, Old HH (as he was known to his legion of fans) began a daily program on KFVD in Los Angeles playing nothing but "race music" -- which soon would become known instead as Rhythm & Blues. For the next 20 years, Hunter was a fixture on Los Angeles Radio. KFVD changed its call letters to KPOP in the early 1950's, and featured both Hunter Hancock and Art Laboe. The station signed off at sundown, so Hunter began broadcasting an evening show on KGFJ. During the 1950's, he could also be found on stations KGER and KFOX. In 1955, he hosted a television show on the CBS affiliate in Los Angeles called "Rhythm & Bluesville".
He was best known, however, for his years on KGFJ. Anyone who grew up in Los Angeles in the fifties and early sixties will recall his familiar HUNTIN' WITH HUNTER theme. Hancock is fondly remembered for his warmth and his corny humor, often making himself the butt of his own jokes.
Hunter was featured in the 1959 volume of the Cruisin' series of radio re-creations. He retired from radio in 1968, and other than an occasional interview, has not done a radio show in 32 years. The Memory Lane Show staff was able to persuade Hunter Hancock, who is now 84 years old, to come out of retirement and do another program. This show will take you back in time to the way radio was back in the fifties -- before the advent of jingles and slick production. Just a man enjoying what he is doing, with cornball humor and the friendly voice of an old pal.
Rockitradio is honored to present, for the first time in 32 years, the Legendary Hunter Hancock.
Old HH personally selected the playlist for this show, so let's step back in time and enjoy:
1. Western Movies - The Olympics
2. Sneakin' Around - B.B. King
3. Night Train - Jimmy Forest
4. Turn On Your Love Light - Bobby "Blue" Bland
5. I Wanna Hug Ya, Kiss Ya, Squeeze Ya - Bullmoose Jackson
6. Let The Good Times Roll - Shirley and Lee

7. Money Honey - The Drifters with Clyde McPhatter
8. My Babe - Little Walter
9. Ko Ko Mo - Gene and Eunice
10. Searchin' - The Coasters
11. Fannie Mae - Buster Brown
12. I Got A Woman - Ray Charles
13. I'm Your Hoochie Coochie Man - Muddy Waters
14. Love Potion Number Nine - The Clovers
15. Lawdy Miss Clawdy - Lloyd Price
16. There Is Something on Your Mind - Big Jay McNeeley featuring Little Sonny
Warner
17. Sax Shack Boogie - Amos Milburn
18. Over and Over - Bobby Day
19. Moanin' At Midnight - Howlin' Wolf
20. Flip, Flop and Fly - Joe Turner
21. Saturday Night Fish Fry - Louis Jordan
22. Hound Dog - Big Mama Thornton
23. Goodnight My Love - Jesse Belvin

******* Rock-it Show #196 features Alan Freed! **********

Rock-it Radio has a very cool show ready to be heard here on the Rock-it right now.... show #196 with Al "Cool Daddy" Smith has come up with an actual C.B.S. Radio show of Alan Freed back in 1956!
Rock-it Radio is honoured to be able to re-broadcast this little historic gem. We also have some listners requests of some Jimmy Reed that Al thru into the broadcast.
To tune into show #196 all you have to do is go to our main website at http://www.rockitradio.net and scroll down and click
to where it says "Rock-it Radio archives page" and then click to show #196.

Here is the playlist of show #196.

1. Honest I do Jimmy Reed 1957 (by request)
2. Baby what you wnat me to do Jimmy Reed 1959
*** Alan Freed Special All songs sung in 1956 ***
3. Why do fools fall in love Frankie Lymon & teenagers
4. Ruby Baby The Drifters
5. Ivory Tower Otis Williams & the Charms
6. This Little Girl of mine The Cleftones
7. Speedo The Cadillacs
8. Mr. Sandman The Chordettes
9. Eddie my love The Chordettes
10. Hound dog Gene Vincent
11. Be Bop a lula Gene Vincent
12. Tweedle Dee Lavern Baker
13. Dance with me Henry Etta James
14. The Magic touch The Platters
15. My Prayer The Platters
16. The treasure of love Clyde Mc Phatter

17. Maybelline Chuck Berry
18. Roll over Beethoven Chuck Berry
19. Earth Angel The Penguins
20. Rock around the Clock Bill Haley & the Comets
21. Share Frankie Lymon & Teenagers
22. Jim Dandy got married Lavern Baker
23. Ling Ting Tong Otis Williams & the Charms
24. Bazoom Otis Williams & the Charms
25. See you next year The Cleftones

This show truly is a tribute to a Rock and Roll hero Alan Freed and hopefully you will tune in and enjoy!

We have a bunch of other shows coming up and still back logged here at the Rock-it, and those that have sent in requests we haven't forgotten you! and those that still wish to send in requests, dedications or special oldies related announcements just e mail us
here at the station at ---

...curious info about CBS when considering that, circa '55, they bought WCAN-TV,
their affiliate in Milwaukee on Channel 25, and WOKY-TV to merge them into WXIX-TV
on the old WOKY-TV channel of 19 -- wasn't 6 allocated at that time?...

>>

The FCC did indeed force both Bakersfield and Fresno to become UHF-only.

For all practical purposes, this meant that the entire San Joaquin Valley of
California was forced to be all-UHF.

But this move deleted only Channel 10 (was never reused), while it moved
Channel 12 from Fresno to Santa Maria, thereby making the Central Coast of
California (Santa Barbara/Santa Maria/San Luis Obispo) full-service (Santa
Barbara as ABC, Santa Maria as CBS and San Luis Obispo as NBC) and all-VHF,
whereas before there was no CBS service and no service in Santa Maria.

Later additions would change this somewhat.

...tilt! Rockford is a mixed market -- 13 (NBC), 17 (ABC), 23 (CBS, licensed to
Freeport), 39 (Fox) and 57 (UPN, licensed to Janesville)...
>>

Rockford got the Channel 13 allocation that would have otherwise gone to
Chicago.

The loss of Channel 4 was previously discussed.

Our local NPR FM station (WILL-FM) broadcasts monthly two
hour chamber music concerts live during the school year,
and very occasionally has done live larger concerts.

I believe that Jamboree, USA on WWVA 1170 is still live, although the station's website doesn't seem to promote it heavily. The listing of performers on WWVA's website was last updated with a Jamboree schedule of October, November and December 1999.

There is a link to the Capitol Music Hall / Jamboree site on WWVA's site, which mentions WWVA quite profusely. And it's kept up to date. But since WWVA has gone to a news and sports format (with a lot of paid religious programming) it appears that they're trying to distance themselves from the Jamboree and the summer event, "Jamboree in the Hills" on the WWVA.com website itself.

The last time I listened to the Jamboree was around a year ago, and recall that at precisely 11, or probably 12 o'clock, they pulled the plug on the broadcast in progress and went straight to religious programming. They used to broadcast the entire Jamboree show, and then go to an all night post-Jamboree party at some lounge in Wheeling.

The Jamboree is promoted on the WOVK-FM website - which is the FM country music outlet in Wheeling owned by the same group that owns WWVA ("AMFM").

There was some discussion some years back, when country music skyrocketed in popularity, of bringing back the Old Dominion Barn Dance (WRVA in Richmond) and also there are some who are working to try to bring back the Louisiana Hayride (KWKH).

But how many people sit at home on Saturday night and listen to the radio anymore?

Whoops - when others mentioned live music shows, I only mentioned WWVA because its Jamboree, USA, along with WSM's Grand Ole Opry are the last two live country shows that I knew of.

Of course, locally, WCRB-FM broadcasts a lot of live events from Symphony Hall - Pops and Symphony, as well as events from Tanglewood in Lenox. WUMB-FM and WERS-FM have a lot of in-studio artists playing live on-air (particularly folk music) and there are still broadcasts from the Passim Coffeehouse in Cambridge. And Haverhill rimshot WXRV has occasional live "River Music Hall" broadcasts.

Unfortunately, after all the smoke from the petitions to reconsider
cleared, the Commish is making VHF HDTV assignments. Even more
unfortunately it is making a few channel 6 assignments.

If it's any consolation, the new channel 5 licensee (WCVB-TV) continued the WHDH-TV tradition, even hiring most of the on-air personnel. So the change-over wasn't all that radical.

One thing that really must irk some folks - WHDH-TV, channel 5, had been the CBS affiliate. When the license went over to WCVB, CBS reverted its affiliation to WNAC-TV, channel 7, leaving the new station management to deal with being an ABC affiliate.

And in the 1973-74 season, ABC's ratings skyrocketed.

Since the FCC allocations list is part of widely published public records, it seems highly unlikely KERA wouldn't know about the Channel 2 allocation.

There may have been some research paper done on the allocation to show that it could be built with a transmitter at the DFW antenna farm at Cedar Hill.

Before KERA struck the deal to put it on the air, there had been numerous applications put in for Channel 2 over the years.

3748. Invitation and opportunites for Audio/DSP engineers

Newsgroup: rec.radio.broadcasting
Date: 2000-08-18 00:00:00 UTC
From: world!DPierce@uunet.uu.net
Message-ID: <FzI3pH.M4K@world.std.com>
Source record: 17806

I am part a group of engineers and intellectual property creators (IPC) who have been working together for a decade and more. I am taking this route experimentally as a means of expanding our skill base. Please do not take this as spam, this is not some pay-us-and-get-rich-quick scheme, this is a serious appeal to professional scientists and engineers to participate in a new process.

Recently, we came to the realization that we are unable to really profit from our creative abilities. A consultant or contractor doing normal work can easily profit by his skills simply by charging very high hourly rates if the project takes a large amount of time. However, when an IPC has already created some property and has instant solutions, it is not possible to price that service on an hourly basis.

We are frustrated by having no way to profit by our creativity and inventive ability. The reason is that we have been using the wrong business model. Rather than charge on the basis of hours we should be charging on the basis of what it is worth to the customer.

Unfortunately, that is a complex process which requires skills that many of us do not have. To solve this, we are in the process of forming a guild-like group which contains business and marketing skills in addition to scientific and engineering talent. Research points a strong resonance for this kind of business. At this point, our concepts should be considered work in progress.

This is an invitation to communicate with us. Currently, we are focusing on audio technology but could easily expand the scope. If you are currently sitting on a specialized skill that has taken a large amount of effort acquire, or if you have all ready created algorithms, signal processing programs, contact us via EMAIL only and we will discuss incorporating it into our marketing. Should we find a match between the intellectual property and the customer base, we will include you directly in the process.

Right now we have a strong demand for inventors of audio processing algorithms, signal processing design, and a knowledge of standard DSP devices. We are negotiating a non-exclusive license for several algorithms that we have already created ourselves. By selling it multiple times, we have the possibility for a much larger compensation. If we can incorporate a wide

range of property, the marketing will be much more efficient and effective.

Drop us a line by EMAIL only (there's no need to post to the newsgroups) if you think you have something to contribute and

Thanks.

3751. Ashtabula OH & Jamestown NY UHF allocations ?

Newsgroup: rec.radio.broadcasting
Date: 2000-08-18 00:00:00 UTC
From: The Bakers <bakersma@worldnet.att.net>
Message-ID: <bPkn5.1834$%O6.58110@bgtnsc05-news.ops.worldnet.att.net>
Source record: 17809

As an aside to an ongoing thread, I believe that Youngstown OH was always a UHF-only market.

Wasn't there a low UHF channel (IIRC, 15) allocated to Ashtabula OH back in the 50s and 60s ? I think that it was on the air at least several times in various incarnations....none of them lasted very long.....WICA comes to mind for call letters [could be wrong on that]. Somehow I associate it with WREO-AM-FM (Radio Enterprises of Ohio) ---- in fact, at one time I believe that the UHF antenna could still be seen on one of towers visible from I-90. Eventually, the channel was lost to land mobile in Cleveland. Anyone know the "story behind the story" on this station ?

Also there was a UHF allocation to Jamestown NY on I believe ch 26 which ran as an independent for a while (maybe more than once here too, with some time dark in between). Nowadays I think its become a NCE-TV, probably associated with WNED-17 in Buffalo, but I remember hearing stories about it being quite a shoestring operation back in its indy days --- reportedly "pirating" program material (not sure if it was network shows or syndex stuff) that it was not cleared for. For some reason, I associate the first name "Si" with that timeframe.
Anyone got the history on that endeavor ?

As far as I know, yes.

Current occupants of the Youngstown market TV dial:

WFMJ/21 (NBC)
WKBN/27 (CBS)
WYTV/33 (ABC)
WNEO/45 (PBS - licensed to Alliance, paired with Akron's WEAO/49)
and
LPTVers WFXI-LP/31 (Masury) and WYFX-LP/62 (Youngstown) (Fox affils
owned by GoCom, owners of WKBN/27)

Nope, but I'd love to hear it! I think I remember seeing the Ch. 15
allocation fairly recently, like in the 1970's...but I didn't live up
there, so I have no idea when or if that was on the air.

Mike (who once "kicked the tires" looking to buy and revitalize
then-and-still dead WAQI/1600 in Ashtabula with a group of other

Hartford/Springfield was an all-UHF market and had 18, 22, 30 and 40, when the
FCC granted a license to WTIC-TV, channel 3.
>>

Intresting that the owner of the Class A station (WTIC/1080) got the most
desirable TV allocation.

3755. FM Antenna Test Results (for those who're curious in a technical sense)...

Newsgroup: rec.radio.broadcasting
Date: 2000-08-19 00:00:00 UTC
From: "MonsterFM.com" <engineering@MonsterFM.com>
Message-ID: <8nlef3$3jj$1@nnrp1.deja.com>
Source record: 17812

We've constructed and tested several different models of various FM
broadcast antenna elements.
The results of these tests, as well as our conclusions, can be found
at http://MonsterFM.com/engineering/fmant.html
By the way, these are true tests (as carried out with a true and
recently calibrated FIM, a spectrum analyzer, a Boonton "cold bridge",
and a Bird watt meter with a dummy load for calibration purposes...
This should alleviate ALL doubt concerning the best mode of LPFM signal
polarization.

Here's a last minute note about Mary McCaslin's Fat Music Show on Sat. Aug. 19th. 3-6 EDT.
The Fat Music Radio Network has been webcasting from the remote studio at the Gavin Convention in Boulder, Colorado this week. Mary and Felton Pruitt will both be live from Soquel, CA and Boulder, CO on the web at www.fatmusic.com as well as on the satellite network stations and the low power pirate radio station in Boulder. This will be the first try at

a two way feed for Fat Music and we hope you get a chance to check it out.

Also, the session with John Kay from Steppenwolf will be re-broadcast Saturday.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an

intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

3760. Re: Silly Simulcasts (was 1160 670 Switch)

Newsgroup: rec.radio.broadcasting
Date: 2000-08-20 00:00:00 UTC
From: Bill Hale <phantom2@eaze.net>
Message-ID: <399EDEEC.53656F5A@eaze.net>
Source record: 17816

The stations were KLSS-930 and KLSS-FM (??) "Class". I remember hearing
exactly that programming. This didn't last very long as 930 changed formats
to talk, then ??, now big band/nostalgia. If I remember right, the FM
continued to play Top 40 for awhile, but is now Spanish language.

3765. buildings 'n stuff

Newsgroup: rec.radio.broadcasting
Date: 2000-08-21 00:00:00 UTC
From: Gomez <jmgomez@flash.net>
Message-ID: <39A1D63C.4BB5@flash.net>
Source record: 17821

I guess I can fill you in on buildings alittle.

I know that AM can be clobbered out by heavy buildings. For example, at the radio section of the WalMart in Burleson TX, I can only hear WBAP/820, 10 miles away. However, I can pick up nearly all city-grade FM/TV stations in that WalMart. I guess AM is the most affected by heavy buildings. I observed this same principle when I used to carry a portable TV/FM/AM in the car during trips.

As far as your question goes, I'm note sure of the answer. I just wanted to give you alittle insight into this "pheonomena" :)

Unless isolated from ground and used as a panel antenna, the roof is a giant
Faraday shield.

Source record: 17824

This past week, Radio Canada Intl. has been showing up loud & clear for me here in the Boston area at something above 1600Khz on an ordinary AM receiver, around 10-11PM EDT. I remember picking up various shortwave services in this range years ago, but hadn't noticed RCI there for quite

a while. (In fact, I assumed it had been among the radio services that were axed by the govt. a while ago.) Is this somethng new, or was I just

hearing something normal under better-than-usual atmospheric conditions?

From: Stuart Troutman
This past week, Radio Canada Intl. has been showing up loud & clear for me here in the Boston area at something above 1600Khz on an ordinary AM receiver, around 10-11PM EDT. I remember picking up various shortwave services in this range years ago, but hadn't noticed RCI there for quite a while. (In fact, I assumed it had been among the radio services that were axed by the govt. a while ago.) Is this somethng new, or was I just hearing something normal under better-than-usual atmospheric conditions?
-troutman@mediaone.net

What I think you have is an internal mixing product, result of a misaligned reciever. If you try other radios and don't get the same reception, that should prove the point.

Hello All,
What would you say goes in the chain first? Aphex Compellor and then a Behringer Mastercom, or would you reverse the above? I would have thought the Behringer Mastercom (dual band processor) should go in the chain first... but now I am not sure. I would like some opinions and feedback.

Thanks for your time.

Best regards,
Rick

3782. End of an Era

Newsgroup: rec.radio.broadcasting
Date: 2000-08-23 00:00:00 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <39A4181D.868ABB0B@haertig.com>
Source record: 17839

As of about 3:30 this morning (8/23/00) the former KGW (620 kHz), Portland, ceased operation from its Delta Park transmission plant and commenced broadcasting from co-owned KEX's (1190 kHz) facility in Clackamas, Or. The two tower Delta Park facility was built in the early 30's and was the first directional antenna system in the northwest. Their prior facility was a flat-top on the roof of the old Oregonian building in downtown Portland.

Byron Swanson, the KEX CE, indicated that there is to be a sentimental last operation of the old RCA transmitter sometime this afternoon before it is dismantled. An intransigent Port of Portland, the current owner of the property, has insisted that all of the equipment be removed from the building by end of work Thursday. When Jacor purchased KGW (unfortunately, now KEWS) from the Bullit Foundation, successor to KING Broadcasting, they did not purchase the land, which was sold to the Port. The Port is using it as a wet lands remediation site to allow it to expand Portland International Airport. The Port contends that operation of an AM broadcasting plant is not compatible with wet lands remediation.

The towers are to be felled, the building razed and the ground system pulled up later this year. One of the towers dates from the original installation, and the point where the old sectionalizing insulators were bypassed and removed is still visible. The other tower was erected in 1946 or 1947 to replace the original that was knocked down by a house in the Vanport flood of 1946.

In a bit of irony, prior to 1946, when Westinghouse built the Clackamas plant, KEX was diplexed into the KGW array.

Pending the construction of new phasing equipment, KEWS will be operating ND with 5 KW during the day and 1 KW at night. An application is pending before the Commission to allow operation at 50 KW ND days and 30 KW DA at night. The ND operation would be from the center tower of the 3 tower dog leg KEX array. Night time operation would be from the two end towers of the array. The towers are approximately 100ï¿½ tall at 620 and 200ï¿½ tall at 1190. Spacing for the new KEWS array would be 120ï¿½ on a 90ï¿½-270ï¿½ bearing.

Much of the original Westinghouse 50 KW transmitter remains at the KEX site, though it has been non-operational for many years. The last of it will be removed to install the new 620 and 1190 phasing equipment. All of the KEX ATU's will be replaced as part of the project. KEX currently operates using a Harris DX-50 with a 50 KW Continental Doherty and a 10 KW Continental as back-ups. KEWS is using a Gates-5. Their current main transmitter, a Continental PowerRock, will be moved from Delta Park to Clackamas as a back-up.

Remember, I did not say that the transmitter wasn't powered up. A station certainly can be broadcasting and still be INACTIVE in their programming philosophy, image, news presentation, etc. Unfortunately, the station has been at a disadvantage since their WTEV days. To compensate for this, they postioned themselves as a Providence station. A stupid move going up against WJAR, always the market leader and WPRI, the distant 2nd. Where does that leave them? I would make them a FOX affiliate, dump the 2 loser half-hour newscasts at 6 & 11 and do an hour from 10 to 11. They could slam the market. ABC could wind up on Ch. 64.

They most certainly did...at least those there in 1958 when Channel 11
applied to switch with it. 4,5,8 AND 13 had a living hissy and went
political with their opposition to this!!!

ABC historically has been a more viable network than Fox.

However, it is little different than, say, WLVI-TV, channel 56, which technically is licensed to Cambridge and not Boston, or WUNI-TV channel 27, the Univision outlet (which also carried, last I saw it, Extreme Championship Wrestling and WAAF's late night rock show), which actually is licensed to Worcester.

Its signal gets into the area. So they operate as a rimshot. Standard radio practice, why not TV?

I feel compelled to point out that none of the Providence-licensed
commercial TVs actually transmit from Rhode Island. Channels 10, 12,
and 64 all transmit from Rehoboth, Mass. Channel 6 transmits from
Tiverton, R.I., and has a translator on channel 48 in Johnston to
serve Providence itself.

The full rundown, including radio, to the best of my recollection (I'm
sure Scott Fybush will correct me where I err):

6 WLNE-TV New Bedford: off SR 177 in Tiverton
10 WJAR Providence: Rehoboth
28 WLWC New Bedford: Freetown State Forest
12 WPRI Providence: Rehoboth
36 WSBE Providence: Neutaconcanut Hill, Johnston
48 WLNE-LP Providence: Neutaconcanut
64 WNAC-TV Providence: Rehoboth (site of old channel 16)
69 WPXQ Block Island: well south of Providence

88.1 WELH Providence: Wheeler School athletic facility, Seekonk
[omitting rest of non-comm band which are all in the obvious
locations]
92.3 WPRO-FM Providence: Neutaconcanut
93.3 WSNE Taunton: Rehoboth
94.1 WHJY Providence: 500' stick in East Providence
95.5 WBRU Providence: WHJY stick
97.3 WJFD-FM New Bedford: between New Bedford and Fall River
98.1 WCTK New Bedford: 500' stick in downtown New Bedford
99.7 WZRA Wakefield-Peace Dale: well south of Providence
100.3 WZRI Middletown: has CP to move closer to Providence
101.5 WWBB Providence: WNAC-TV stick
103.7 WWRX-FM Westerly: well south of Providence
105.1 WWLI Providence: Neutaconcanut
106.3 WWKX Woonsocket: west of Woonsocket (about 10 mi north of Providence)
107.1 WFHN Fairhaven: has CP to move closer to Providence

(And yes, I've seen almost all of these -- the exceptions being a
few of the non-comms, 103.7 Westerly, and 69 Block Island.)

likely as mentioned here, a misaligned tuner, but who knows.
RCI came really close to being axed, but there was so much outrage
over it, that the funding was continued. I live about 40 km north of
their transmitter site on marsh land in Sackville N.B. and it's quite
impressive as it's right on the main highway between new brunswick and
nova scotia. they also welcome visitors if you are ever in the area,
and as I just moved up here to moncton from halifax nova scotia,
hopefully this weekend i'll get down and tour the site.

If you can afford Aphex quality, why on earth would you use Behringer? Get a
Dominator multiband brick-wall limiter, and put it after the Compellor. Behri
nger is cheap made-in-China designs that are stolen chip-for-chip,
knob-for-knob from other slightly less cheap designs; check Deja News
archives for rec.audio.pro to learn much more than you asked for.

ROR was an experience to say the least.

Right On Radio was a radio station inside of a bar and grill called "Toms Garage"

I replied to an ad in R&R and was chosen for one of the slots.

Toms garage is located in Guest Harbor, in the City of Visby, on the island of Gotland, in Sweden.

There were 3 DJ's: Myself, Kat from New York and Natalie from New Zealand.

Right On Radios homepage is at: http://www.rightonradio.com

The Job description is at: http://www.rightonradio.com/dj.html

ROR is 102.4 in Stockholm and 89.2 Gotland
both owned by Tom McAlevey. both are run from the
offices/studio/bar/grill in Visby.

ROR is mostly automated using Dalet automation. The Visby station was live from 2p to 2a over the summer.

According to Tom: "Right On's format is wide AC" it is more like armed forces radio, some country, some rock, some misc. Elvis, AC/DC, Frank Sinatra and Shania Twain can all come up in the same hour.

According to the web page the Job description is: "Full-time from the third week of June through the second week of August. You will work one four hour on-air shift per day sometime between 2 PM and 2 AM. In addition you will also work four hours each day as a "celebrity" bartender at the bar connected to the on-air studio"

4 hour airshifts, but none of the imported DJ's spoke Swedish so only one of the DJs ever worked as a bartender.

Cat and I worked in the kitchen and passed out flyers to tourists getting of the ferry to the island.

"You will even help with production and voice work, assist in marketing events, and perform all types of duties related to a major-market commercial radio station"

In reality the production room was set up with the microphone in a seperate room so production required 2 people, only one promo was produced all summer. A huge chunk of commercial time went unsold as well.

"I pay your round-trip flight here you will work full-time from the third week of June through the second week of August."

I was sent home early as a budget cut when the club did not take off as expected and was not the "premier happening in town this year"

One day Tom demended that I clean the employee bathroom until "it sparkled" when I told him that I came to do radio not janitorial work, it was decided that it was time to part ways.

Tom moved my departure on American Airline up 10 days and neglected to cover the $150 charge to do so. he also neglected to tell me this, so I was almost stranded in Stockholm with no money for 10 days. Fortunately my girlfriend was able to charge it to her Visa at the last minute and get me on the plane.

"You can eat in the club for free (self-service for employees)"

yea, except the kitchen was completed behind schedule and we had to buy our own food for the first 2 weeks. there went a couple hundred bucks.

"You﷽ll have unlimited internet access for
e-mailing friends etc"

Not true, if I used the internet for more than 10 minutes I got bitched at.

"dormitory style accommodations with simple kitchen and bathroom facilities"

No working shower for 2 weeks, we had to use the shower at the club.

"The best thing I can say about myself as an employer is that, of the hundred or more people who have worked for me over the last several years, almost all of them would happily work for me again"

On the day I left the bar manager and resterant manager quit, so of hand I can name 3 people who would not return to work for Tom.

All in all I enjoyed my first trip to Sweden and Tom delivered MOST of what he promised. I was only out $450 at the end of the summer for my "all expense paid" trip. I have no complaints. I hope that Cat will post her comments in here as well.

Believe it or not a Compellor is the most interesting piece of work one can have in a production chain... it is a DC driven compression -leveler that if worked properly can give the impression of wrapping background around a vocal or a spoken word... it turns an otherwise level nightmare into a smooth single product that stands out on the air... on the other hand, in the 'hand' of a zealot for sound the Compellor can remove the headroom in anything and ruin it... the trick is in turning the outputs all the way up and tweaking the inputs only... in the air chain a Compellor can turn fringe into acceptable.... but once again it can also ruin it....

Thanks for sharing this. I was going to post the "Snake Story", but you seem to be taking it ok...$450 is pretty cheap for a European trip anyway, so I'm glad you had fun.

Get this before it hits the archives (and costs $$$):
http://www.calendarlive.com/calendarlive/tvent/radio/20000825/t000079737.html

In a nutshell: Tijuana set up a station on 90.7. KPFK listeners in
outlying areas
(outside of the protected contour of KPFK) are peeved because the new
station (XLNC1--shouldn't that be XELNC1) causes interference....

But wait, there's more: XELNC1 is supposed to be 1 kW...but has it
been creeping up to nearly 20kw when no-one's looking? Hmmm....

Thanks, Kurt for the update on ROR. Your comments seem show a lot of things: that Tom was as honest as he had to be about things; that your summer vacation to Sweden only cost $450; that you're better for the experience.

Your experience will be one I will share with others in radio. It sort of reminds me of when I was freshman in college and those book companies came and asked us if we wanted to make "big money selling bible books."

Ah, but that's another story for another time.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

3797. What's with Citadel Communications?

Newsgroup: rec.radio.broadcasting
Date: 2000-08-25 00:00:00 UTC
From: tbrutis1@aol.com
Message-ID: <20000825131122.27714.00000381@nso-cu.aol.com>
Source record: 17850

This past week proved to be a sad one for Country Music Fans here in the greater Binghamton, New York area. WHWK FM 98.1 (The Hawk) saw fit to fire Jerry James & Dave Freeman (Better known as "The Breakfast Flakes" after 12 years of service. It was the zany antics of Jerry & Dave that helped make WHWK The#1 rated station
in the greater Binghamton area for at least 10 of the past 12 years.
When the local media attempted to ask Citadel Communications the reason for the firing of the immensely popular duo, all that was said that the Morning Show was "being moved in a new direction". When you've been #1, there's usually only one direction to head. No station wants to go in that direction.
Perhaps the area's newest station entry into the Country Music Format B107.5 will see fit to boost themselves into the upper rankings of Country Music Listeners in the Binghamton area by hiring Jerry & Dave to show the HAWK & Citadel Communications how wrong they were.

To Citadel Communications. THis mistake may be one that will be very difficult to recover from.

Just one Question Citadel, WHY?

Awhile ago, I sent a news message for posting to this rec.radio.broadcasting group and was politely told that it was received but that I had to log in, which I did (and was accepted). I never saw the message however and wondered if it perhaps was not permissible to post a "for sale" item? Reason I posted this equipment (150ft commercial radio tower etc) was that I'd not had any response from the hobby type news groups (likely due to its size). Just curious.

Sincerely,

Gord Skiffington

David....
Your tag line is the key to the answer of this question...
Support good music don't buy bad music. The internet snobs all believe it is a matter of delivery.... and it is not... so did the makers of CD's... and cassette players in cars...
it is the product not how it is delivered... radio is free to the listener.. any form of internet based radio will cost money.. and it will never be free... content may be free but it will cost access to get it .... and a most important point: Internet pundits live in their own little world and completely ignore the reality that the majority of people do not now have and will never be able to afford wireless internet connections... those people listen to radio for the same reason people have always listened to radio.. companionship, diversion and fulfilling a need that has nothing at all to do with the music....
I have spent the last 2 years as one of those internet snobs living in my own little techno-world and it was like graduating from a 12 step program to escape it ... freedom from intellectual compression....
lee

3800. Re: Questions About The Future of Radio

Newsgroup: rec.radio.broadcasting
Date: 2000-08-26 00:00:00 UTC
From: Bill Blomgren <billblomgren@hotmail.com>
Message-ID: <tCPp5.69850$rd1.12316066@typhoon-news1.southeast.rr.com>
Source record: 17762

If all you want is music, minidisk and CD are the real way to go. The problem with streaming audio over wireless is that it takes a LOT of bandwidth... and if you get a large pile of users trying to use that, each will get a TINY part of the possible bandwidth. If you are looking for bi-directional (which TCP/IP is by definition, and TCP/IP is what links up the Internet) you are looking at having to have the same sort of bandwidth in both directions. Now that presents a huge challenge.. Where are you going to get that bandwidth?

They are rapidly carving up the spectrum up as far as infrared... and it won't all be going to wireless internet. Look for most of it going to services that the government wants... Point to point (since the very high end spectrum tends to work well in that arena)... And perhaps some for wireless IP. Now the problem: any time you get up in the high gigs.. you have problems with moisture. Like fog, high humidity and so on... The higher you go, the less reliable it gets for anything more than very short distances.

People listen to radio in cars for a personality at the other end, and information. If the information is not useful (traffic etc) it gets tuned out.

Looking at the technogeek types I work with, do they listen to radio if they want MUSIC? No. They turn on the CD player. They turn on the radio for humor/news/traffic/sports/talk... not to hear someone playing his favorite record of the moment.

The problem of capacity on the wireless internet will be with us forever. There is only a finite amount of spectrum, and people looking for a free ride won't get it.

Are -you- willing to spend $100 a month for wireless internet in your car? Salesfolk will do it for email and possibly research. The average housewife? No way.

> almost unlimited channels change the course of broadcast radio?

It depends on how many people adopt it. If these turn out to be expensive niche technologies, it won't affect broadcast radio any more than CD players did.

If everybody gets wireless Internet, etc., then I'd expect conventional broadcast to be affected in much the same way that AM was affected when FM became more popular, or how radio programming changed with TV came along etc. Some types of programming simply moved from one format/service to another...but that didn't mean, for example, that radio stations went out of business when all the old drama programs moved over to TV. Radio just found something else to play (more music, etc)

Most big corporate owners are so stupid as to boggle the imagination.
So why not let them head in this direction. A death wish is a persons
right to have.

Okay, can someone please explain this one to me???
KZND 87.7 FM, Anchorage, Alaska <http://www.kznd.com/>

Apparently, it's a commercial station run in conjunction with TV Channel 5 in their area. This is *not* a pirate, but a commercial broadcaster expanding their holdings in the area. Supposedly they also own KNIK 105.3 FM in the area as well.

Is this remotely legal with the FCC?? I can find no FCC reference to it.

Danny

That's the sound frequency of Channel 6, bot 5. Actually 87.75 MHz.

I think it is indeed low power... hard to hear in downtown San Diego in my
office there even though I'm on the 21st floor and can see the Tijuana
hills.

Sorry to do a followup to my own post, but I just discovered this:
<http://svartifoss.fcc.gov:8080/cgi-bin/ws.exe/prod/cdbs/pubacc/prod/sta_det.pl?Facility_id=21492>

Apparently it's a low power TV station on Channel 6 primarily promoting
their audio on 87.7 as an FM station. Very odd.

Would this be fairly legal, assuming they follow LP-TV regs??? I'm also
afraid to see what they use for the video portion. ;)

This IS an LPTV channel 6 operated as if it were an FM station in a saturated market. The local FM's, incensed at the idea of competition, sic'ed the Commish on them for not broadcasting a video signal along with the aural signal. KZND's response was to put a camera in the control room.

Is there a TV channel 6 KZND in town? If so, then 87.7 is their sound
carrier for the TV channel 6.

No biggie....someone (usually a woman) sees a snake half-frozen
on the road in the dead of winter.

The snake calls out "Please pick me up and take me somewhere
warm!"

The woman says: "But if I do, you'll bite me"

Snake: "I promise! I won't bite"

So she picks up the snake and puts it inside her coat. Sure
enough, soon as the snake warms up....*chomp*!!!

Woman: How could you do this to me after all I've done for you!?!?!

Snake: I can't help it, it's just my nature. Besides, you knew darn well

I was a snake before you picked me up!

Hello folks,

I just finished reading the Indiana radio watch post that appeared on this news group. While reading the article there was a reference near the end of the article about a Christian radio station and some afiliation with a station in Batton Ruge LA with the call letters WJFM.

I the person who posted this months issue of the Indiana Radio Watch reads this message. He should know that at one time WJFM belonged to a station IIIIn Grand Rapids Michigan at 93.7 FM and at one time it was a Fetzer owned station whitch at one time played Beautiful music, Country and Finally Rock music before it changed call signs and became WBCT once again playing Country.

Just thought you'd like to know.

Message-ID: <2rneqsg4o2bts5lq90jvqpllvm7tu780ho@4ax.com>
Source record: 17758

With the coming of wireless broadband Internet delivering speeds of at least 128kbps to notebook computers in your car or outdoors, you can easily see that it is possible to listen to streaming audio on the Internet by launching Winamp, WMP, or Real Audio.

In about 10 years, portable Internet radio players would converge the streaming audio with the ease of a simplified portable unit allowing people to tune in any streaming audio signal they choose, whether it's a homemade signal from live365.com, or a radio station streaming from 12,000 miles away, or even a local station's stream whose terrestrial signal doesn't reach where you're at.

Also, XM is coming around 2001 to car radios as a subscriber service.

Question: How will XM radio's 100 channels and wireless Internet radio's almost unlimited channels change the course of broadcast radio?

any comments?

Greg and/or Joan <ggjn@sprynet.com> wrote:

"ABC historically has been a more viable network than Fox."

True, though Fox does reasonably well in the dayparts in which it operates. (A big drawback of switching to Fox is the need to acquire a lot of syndicated programming to fill the dayparts where the big three operate but Fox does not, and likely never will.)

"Its signal gets into the area. So they operate as a rimshot. Standard radio practice, why not TV?"

Why not indeed. WTTV (licensed to Bloomington, Indiana) has been a rimshot into the Indianapolis market for decades, even adding a second transmitter in Kokomo a few years ago; WNDY (licensed to Marion) is also a rimshot into Indianapolis. Louisville also has two TV rimshots, WFTE (licensed to Salem, Indiana) and WWWB (licensed to Campbellsville).

3821. 800m link

Newsgroup: rec.radio.broadcasting
Date: 2000-08-27 00:00:00 UTC
From: Robert Jeffares <robert@pnn.org.nz>
Message-ID: <967371824.583666@news.win.co.nz>
Source record: 17778

I am looking for a link which will cover the 800m between our studio and our FM transmitter site. Local restrictions mean we have to run 2GHz or better because no other vhf or uhf link frequencies are available.

the path is such that we could modulate a garage door opener [if we knew how]

Does anyone know where we can get those low power local links used by computer network people which we could run aes/ebu audio onto. They have to be a better price option than a full blown microwave link which is made to cover 5-25 km.

>That's the sound frequency of Channel 6, bot 5. Actually 87.75 MHz.

Right! And what's actually happening here is that the station in question is KZND-LP, a low-power TV station on channel 6 in Anchorage. Station owner Jeremy Lansman (a veteran of the Lorenzo Milam free-radio era of the 70s) decided that the LPTV in question could make more money by treating its audio carrier as the important part of the signal than by trying to do anything with the video side (a wise move, IMHO, considering Lansman owns full-power KYES-TV on first-adjacent channel 5!)

IIRC, KZND-LP signed on with *no* video at all, just the audio carrier, but Lansman later decided to run some text on the video portion of the signal to keep the FCC happy. (That, apparently, wasn't enough; now the station's video shows a studio camera shot, I think.)

At one point, Lansman had a Web page with live feeds of KZND-LP audio and that of KRUA (88.1), demonstrating the lack of interference (he says) between the two stations less than two full FM channels apart.

> --

I first ran across XLNC1 in San Diego hotel in early July, and was astonished that another station would be allowed to go on the air where KPFK already had a reasonably good signal. On paper, at least, KPFK is the biggest station in the country: 110kw @ 2830' above average terrain. There is not a single other San Diego/Tijuana station on the same channel as an LA station except, now suddenly, on 90.7, home of L.A.'s biggest signal. How could this happen? Why pick *that* channel?

I didn't realize how powerful XLNC1 was until I listened while driving to Santa Barbara from the Bay Area. When I came through the pass into Gaviota, right where 101 reaches the Pacific, I punched up 90.7. There was XLNC1. Loud and clear. I tried the other San Diego and Tijuana majors on 91.1, 90.3, 92.5, 105.3, etc. They were all there, too, sounding about the same strength. So were the LA majors on 93.1, 101.1, 94.7, 104.3, etc. When I got to Santa Barbara, most of the big LA stations, especially 101.1, were coming in pretty well. KPFK was fighting XLNC1 all over the place. Later in LA itself, I noticed that KPFK often had that other-station frying sound going on under the signal. By contrast, 105.1 (no longer KOGO but K-Mozart or something), which transmits from a tower very close to KPFK's, had a killer signal pretty much everywhere I heard KPFK's sounding lousy.

This last week I was back in Santa Barbara, and XLNC1 wasn't nearly as strong, but it was still there.

It's worth noting, by the way, that KPFK gains its power with a 14-bay (give or take) antenna located close to the ground and back from the edge of the ridge on Mt.Wilson where most of the LA FM transmitters are distributed. This system concentrates all the power in a narrow band aimed toward the horizon.This saves electricity, but is not an ideal setup, since it involves many nulls in the vertical plane (meaning weak zones looking downward toward the metro from the transmitter). The site is also shadowed toward many areas seen directly by weaker stations on higher towers at better spots on the mountain.

The issue is money. If KPFK had the pockets of a commercial station, it would probably be radiating from a better site on Mt. Wilson on a higher tower with marginally less power and the best signal in town.

Still, something needs to be done to move XLNC1 off this channel. Dropping it to the licensed 1kw (at 300 feet or something) isn't enough.

Note: XLNC1 has a Web site, and a special page for annoyed KPFK listeners: <http://www.xlnc1.com/kpfk.html>.

It says:

"We (XLNC1) did not choose this frequency (90.7 FM), it was assigned to us by the S.C.T. of Mexico in agreement with The F.C.C. in the United States."

Those are the parties that need to work this out.

"We suggest that you use a directional receiving antenna on your FM Tuner for better reception. Then you can have a choice of station, sharing the frequency."

And what about in your car? Your apartment? Come on.

"Fortunately our transmitters are not in the same location.

"KPFK transmits from Mt. Wilson in Los Angeles, California at 6,000 feet of altitude with 120,000 wattsï¿½ effective radiated power.

"XLNC1 broadcasts from Tijuana, Baja California at 300 feet above sea level."

Note that they exaggerate both KPFK's wattage and its antenna height (2380 feet above average terrain, and probably less than 6k feet above sea level too), while neglecting to mention their own wattage.

Fishy stuff.

> night?

Yes. Or, at best, it won't hurt much. But the truth is that it will also probably reduce his FM reception.

That said, he should build the best house he can and then adjust his reception accordingly. I have a friend who lives high in the rockies and has a metal roof with many heavy-duty lighting arrestors wired to massive plates in the ground -- since the house gets hit many times by lightning. In his case, I wouldn't sweat the AM DX. If your pal's a serious DXer he'll probably want to put a long-wire antenna outside the house in any case. Also a rotating outdoor FM antenna, if he cares about FM.

Here in my house we have stucco outside walls. The stucco is essentially a kind of cement spread over a mesh of wire. It does heavy damage to FM reception inside the house, especially if it isn't perfect in the first place. The roof may be asphalt composite shingles, but it lays on a thin layer of aluminum foil (not sure why). We also have metal gutters and chain drains to the ground at the corners of the house. None of this helps reception. (And the truth is, all houses get worse reception indoors than out.) So I built six coaxial cables from the roof to a wall in the garage, where I can patch whatever I like through coax to various rooms. Right now I have a rotating TV antenna, a rotating FM, a fixed FM, a Dish Network satellite dish, and a whip antenna for a Ramsey FM-100 FM transmitter, which I use to distribute music over an FM channel to recievers and radios tuned in to the channel in various rooms and within a couple hundred feet of the house. It's a great system.

I was also going to set up an outside AM antenna, but it turns out we're going to move, so that will have to wait for the next place.

Hard to tell, they were supposed to have made their change by now. It's down to CHR/Top 40 or Extreme/Adult/Hot Talk format with Howard Stern in the morning. Probably that is being held up pending Howard's contract negotiations with CBS. I think an extreme talk format would be much better than the CHR/Top 40 since it is not already being done in Atlanta. A T40 format would be going against Star94 and The Beat 95.5. The Beat is scrapping AND stealing a few listeners from 95 but they can't seem to come up with a station personality or any radio talent for that matter.

I'm more interested in the battle that WCNN 680 AM is undertaking with WQXI 790 The Zone. WCNN is going back to it's all sports talk format (680 The Fan) and take 790 on. I wish 680 would figure out a way to get the NHL Atlanta Thrashers radio contract away from 790, the 790 signal is INCREDIBLY TERRIBLE after dark while 680 is the 2nd strongest AM in Atlanta behind the 50K watt flamethrower clear channel WSB 750 AM. I wish 680 a lot of luck, 790 is now entrenched in sports talk like a tick on an Alabama hounddog.

One other additional note, sadly Smooth Jazz (love it or hate it) is meeting it's demise in Atlanta when 104.7 "KISS" FM takes over the 104.1 signal where WJZF now resides. I have been hearing that WJZF has recently been seeing a surge in listeners hoping to "save" the format but it's all for naught, it's end is near.

This is just too funny. Makes perfect sense, but I've never heard of
anything like it. I always wondered why FM radios went down to channel 6
space..... ;)

Since the audio carrier is on 87.75, does an electronic tuner set to 87.70
pick up stereo or not?

Since you don't normally see TV or radio stations allow ads for competing stations unless they are about to scrap the current format, anyone know what's up with KXTX?"

I did see some "competing" promos on TV in the late 1970s -- CBS ran some spots for their Saturday morning cartoon lineup on independent stations during afternoon syndicated programming aimed at that demographic (such as "Gilligan's Island" or "Spiderman" reruns). The spots mentioned the CBS affiliate only by channel number. A programming person at WDRB in Louisville told me that they accepted the spots because they were counterprogramming in that time period, so they had nothing to lose.

Source record: 17791

The thread about KZND on Channel 6's audio frequency reminded me of the time in the late 70s-early 80s when my college radio station, WMUC (88.1 FM/650 AM-cc dark now) at the Universitty of Maryland attempted to gain a footing on FM by going to a Channel 6 audio frequency.

At the time, the FCC was considering new rulemaking to allow radio stations with a limited amount of power to be licenced in areas where there was no Channel 6 assigned, and where the interference to the Channel 6 licence holder would be minimal/none. The plan was that they were going to grant a limited number of experimental licences to test the viability of the concept.

We filed for one of those test licences at the time, since an engineering study revealed that co-adjacent interference with the Channel 6 allocation (I think it was WTVR-TV in Richmond, don't remember clearly now, that part of my brain has been re-allocated to HTML, I think <g>), about 90 miles to the south, would be minimal. Also at the time, we proved that the old analog FM radios could be tuned down to 87.9, and programming could be heard over the stereos of the time. (I don't know if you'd still be able to do that with today's digital tuners, but there you are.)

In the end, what killed the proposal, which we felt had a good chance of being approved, and would have helped us serve one of the few large college campuses in the country without an FM licence, along with a large commuter population, was a competing group in D.C. that wanted to set up a station to train minority youths on how to do radio. Even though we were better funded long-term, had a better application engineering wise (we had a tower site approved and everything; the other guys didn't) and planned to program the station 24X7 (the competing group wanted to use the frequency only a few hours a day, and their funding was extremely tentative at best), the FCC decided not to award an experimental licence to either group, deciding in the end that they did not want to be seen as turning down either 'minority youth' or an award-winning college station. If I remember correctly, that idea to 'seed' low-power FMs where Channel 6 didn't exist eventually died a quiet death on M St.

In the end, WMUC was granted one of the last 'grandfathered' 10-watt FM educational licences @ 88.1 mhz, a couple of years after I graduated. the feeling, according to the lawyers, was that the Commission, having turned down WMUC because of the latecomers, would now be hard-pressed to turn them down a second time when an otherwise complete application was submitted by a qualified group.

Of course, this was before the folks at the NAB, and NPR (seeking to expand their member-station roster), and others, pushed through that rule setting a minimum power level for educational FMs.

Soon after, Johns Hopkins University in Baltimore applied for a substantial power increase (from 10 watts to 25,000, I believe) for the formerly student-run WJHU (88.1), which became...you guessed it...a professionally run, news-and-classical music NPR station. Which was fine for WMUC, since the two signals really didn't begin to clash until just south of Columbia, which was at that point out of WMUC's service area.

And so it goes...thanks for letting me reminisce!

As we've already discussed (for more than a week), the object of my
testing was neither to "sell" an antenna nor to "prove" a design
as "better than other designs"...
The object was to prove that a decent (FCC acceptable) circularly
polarized antenna can be built for considerably less than $500.00 per
bay.
Also, as I've stated on several different occasions, this antenna
(aside from a couple of small feedpoint changes) is IDENTICAL to the
Jampro "Super-Penetrator" design. SWR also sells a version of this
design and, I beleive, ERI sells a slightly modified version wherein
the elements make a 45 degree turn midstream...
In other words, if you're looking to find a scientific analysis of an
antenna design that's been a "tried and true" broadcasting staple for
MANY years... Please call Jampro (probably THE authority on this
particular "crossed-dipole" design.
I'm not a major designer, manufacturer or marketer and have simply
set out to prove that the thing CAN be done for less than a set amount
of money.
By the way, if you are really interested in some astounding antenna
figures... There's a guy about 30 miles north of me who has (according
to HIS literature) managed to DOUBLE a station's ERP with a SINGLE BAY
antenna! (It's vertically polarized only but, the last time I looked, a
single vertically polarized folded dipole only exhibited gain when
compared to an isotropic... Which, the FCC doesn't do.) I *think* the
address is http://www.mbcradio.org/antenna/ or something awfully close
to it. (Actually, I KNOW this is it as I just checked it.)
Personally, I'd like to see some input on how THIS is possible. Am I
missing something, here? The vertical dipole I tested even LOOKS almost
the same. Just a little more spacing between element and support...

>>There's a guy about 30 miles north of me who has (according
to HIS literature) managed to DOUBLE a station's ERP with a SINGLE BAY
antenna!<<

Double compared to what? Sounds to me like one of those claims similar to
"new and improved." A single-bay C-pol antenna has a typical gain of a bit
less than 0.5, so it sounds like whatever the original antenna was, had a
gain of 0.25?

>>Also, as I've stated on several different occasions, this antenna

KXTX-TV 39 Dallas/Ft Worth was recently sold to Pappas Telecasting, which owns Fox, ABC, WB, and other outlets around the country. Speculation seems to be they want to flip KXTX-TV to Spanish-language.

Tonight on KXTX-TV are ads from KSTR-TV 49 saying "Married...With Children" and "The Three Stooges" are moving from KTXT to KSTR-TV next month. Since you don't normally see TV or radio stations allow ads for competing stations unless they are about to scrap the current format, anyone know what's up with KXTX?

On a side note, if KXTX-TV is to flip to Spanish-language, does anyone really think four Spanish-language TV outlets are going to be successful in Dallas? You already have Univion O&O KUVN-23, Telemundo affiliate KTMD-52, and forthcoming KLDT-55 (sold to new Spanish network HTVN, with KLDT to become the flagship station). I didn't even include the two Spanish-language LPTVs and the possibility of KTAQ-47 Greenville (Spanish videos K25FW's owners are acquiring it; KTAQ has been trying to upgrade their signal into the market).

XM and Sirius satellite radio will better serve those who want more music without annoying commercials and jerkoff card reading announcers for $9.95 a month. The variety of music will greatly surpass the 20 song's everyday for six months free radio tries to passoff as entertainment. Besides music, there will also be ad supported channels with all types of entertainment and sports shows which will not have such heavy commercial clusters which we are assaulted with now on AM/FM. Sirius plans to start their delivery to cars but will also move into the home and walkman type recievers as well. AM/FM will become the service for the peasants and gheto dwellers (the no money crowd). Upscalers will latch on to the service with the more refined nitch formats available from the satellite services. The internet MP3 and streaming will always be limited to bandwidth which is constantly dwindling. Satellite radio will be the real deal. I expect to see Satellite radio take down AM & FM even more viciously than the FM slaughter of AM.

No. What concerns me is the fact that he's advertising (in Radio
Shopper and Radio World, for instance) a "Double your ERP" single-bay
antenna as a means of using, say, a 50 watt exciter to achieve a 100
watt ERP when he can actually claim a 3db gain over a CP antenna and
NOT over a dipole as the advertising would SEEM to indicate.
Call me "stoopid" but, to me, this is very misleading and could lead
to construction - in the case of those who don't bother to ask a second
opinion - contrary to that authorized on the issued CP...) Perhaps it's
a statement referencing an isotropic radiator? Do you know of anyone
who actually USES one of those?

Cute... I'll give them credit for the basic "crossed dipoles" concept
but, can they really claim a patent for the dipole, itself? The feed's
different. Well, as different as can be!

> pick up stereo or not?

Problem is, the TV stereo standard is different from the FM standard.
Not very different, but enough to not be compatible.

That said, it's *probably* legal to use the FM system on a TV station.
(I'd have my lawyers check before trying though!)

The other problem with this situation is that one of the other Anchorage
TV stations has applied to change its DTV assignment to channel 6. A
DTV assignment would have priority over KZND-LP and would force it to
change channels - of course, channel 6 is the only channel they can do
radio on. If the DTV transmitter is close enough to KYES channel 5, the
two channels could co-exist in the same city.

(I really have to wonder if that DTV application was filed with the
express purpose of quashing KZND? DTV channel 9 would seem to be a much
better choice. It would offer the same power consumption savings, and
would have no site restriction; it could be placed anywhere that would
put a city-grade signal across Anchorage..)

You're right, this is patently misleading. ERP = transmitter power output, - line loss, x antenna gain. Hooking a line and antenna to a transmitter creates ERP, it doesn't double it. Duh.

All good comments. I remember when movie theatres feared television will dwindle their audiences. The Film studios then came out with "Cinemascope",and "Panavision", and of course "3D". Then television stations ,and networks feared "CABLE", then cable feared "SATELLITE TV". My point, radio will adapt as it has. How it will do it, is open to speculation. I believe though satellite radio is the most serious challenge than the internet. If the CORPORATE MERGING BEAN COUNTERS keep loading stations with excessive spots,boring liners,and limited ,ran into the ground playlists, then radio will slowly hemmorhage. Satellite broadcasting will win.

Actually, 150 kHz away from the channel 6 audio frequency (87.9 MHz
vs. 87.75 MHz). That 87.9 MHz frequency is considered by the FCC
to be "Channel 200," but as Max notes, prior to WMUC's application
there were no active users of Channel 200.

>the south, would be minimal. Also at the time, we proved that the old analog

I've yet to come across a tuner of any kind - digital or analog -
that couldn't get down to 87.9.

>youth' or an award-winning college station. If I remember correctly, that
>idea to 'seed' low-power FMs where Channel 6 didn't exist eventually died a
>quiet death on M St.

Almost dead...but not quite. KSFR at Mountain View High School in
California applied to move to 87.9 (I think from 88.1) a year or
two after WMUC -- and that move *was* granted. KSFR is thus the
only FM station on 87.9 operating (legally, anyway) anywhere in the US.
(I get the impression that the FCC would not look terribly kindly
on further applications for the channel, though.)

The now-defunct college in my neighborhood, Bradford College, ran its
own radio station on 87.9. Couldn't have been more than a watt or two,
although it could be picked up in the car throughout a lot of the city.
Nothing of interest was on it, the kids were just using it as a toy.

Another station (WOGR Salisbury, NC) held a permit for 87.9 for awhile.
I don't know if they ever used it - they're now on 93.3.

To my knowledge WOGR and KSFR are the only two stations to ever hold a
permit for that channel.

That depends on what their business model looks like. I don't think
they'll compete directly because they won't have much local content.
One reason many tune in is to find out what the accident down the road
was all about last night or to find out what the weather will be like.

Add that to a local flavor comment or two, or perhaps a local concert
announcement and you can see that one service will be very different
from the other.

Whether it draws enough listeners away from local radio to be
significant depends on whether they apply enough money to make a
program so interesting that it beats "local flavor" hands down.

It's possible, but I'm not holding my breath...

>Satellite broadcasting will win.

You hit the nail on the head: radio will either adapt to compete or get run out of business.

If you consider that radio stations have mega bucks behind them, you have to believe those guys will do something to protect and improve their investment. I believe that's a far more likely outcome than the elimination of AM/FM radio.

One thing SM and Sirius cannot do is offer local news,weather, talk and sports. Those are listener benefits that far outweigh any good music format on a satellite delivered venture.

Furthermore, music formats cannot be "one size fits all" for the entire country if they are to be successful. A locally produced classic rock station that's #1 in Pennsylvania might be #200 in a Texas market. Music tastes are different.. Station programmers work to appeal to the local audience. SM can't do that.

In the long run, I believe these satellite stations may wind up being a benefit to local stations if owners feel they need to invest more in local programming to improve their investments.

Thanks Arnold. One thing I like to mention though,Directv,and Dish offer local tv stations. I feel satellite radio can find room and make local information available. There has been talk about providing this. I know that is a tall order,perhaps it will be offered as an expanded package like cable and satellite tv have with HBO and Showtime. On local flavor,that is slowly going away as long as the mega corporations keep insisting on "cookie cutter" formats. To stave off the satellites let the local stations return to their roots! Let the PD be the PD, not a "yes' person to a national program consultant!

But both services will have announcers on their music channels talking.
Granted, they'll probably be talking about the music and the performers, but
it's still talk. And not knowing either the complete jock lineup (or in some
cases, the jocks), I can definitely say that Meg Griffin (Sirius AAA) is not a
"jerkoff card reading announcer," but Eddie Webb (-ex Rock 103.5 and the Loop
Chicago, XM heavy metal channel) is somewhat annoying--and he's not a liner card
reader.

Also (and David Eduardo, please correct me, since your company's doing some of
the Latino programming for them), Sirius will have commercials on some of the
music channels--granted, a much lower spot load than your typical broadcast
station.

Meg Griffin, just another HO floundering around New York radio. She never even came close to the late Alison Steel. As for your Chicago nobody (Eddie Webb) I guess he reads his liners off toilet paper and puts it to a better use after he bores his listners with it. Sirius music channels will have little to no talk. Don't forget, the Sirius radio will have a display which when prompted will read out the Artist and title information. No need for jerkoff announcers. Like Barry White sang, "Let the music play".

Changing from a CP antenna to a VP or HP antenna will certainly double
your ERP given the same transmitter and line, but only because of the
asinine definition of ERP that the FCC uses with CP antennas. It is
contrary to engineering custom.

3860. Re: FM Antenna Test Results (for those who're curious in a technical sense)...

Newsgroup: rec.radio.broadcasting
Date: 2000-08-29 06:14:27 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <39AB5717.A976B01E@haertig.com>
Source record: 17652

It is very easy to get 3 db gain (relative to a dipole) out of a vertically polarized folded dipole, in fact, in the real world it can be difficult not to have gain. Of course, this gain is in the azimuth pattern, and the antenna is no longer omnidirectional. Varying the distance between the element and it's conductive mount will dramatically change the degree of directionalization and hence gain. Looking at the picture at the URL you provided, this almost certainly the case. Of course his claim that the antenna is omni-directional should really read, Omni-directional +- 1-1/2 db. (c:

It is not possible to get gain in the elevation pattern with a single folded dipole element that is 1/2 lambda or less in length.

As regards circularly polarized FM antennas consisting of individual radiators (as opposed to traveling wave designs), there are really only two basic designs - the fractional turn, normal mode helix and the ring stub. The fractional turn can be analyzed as a series of ring stub designs. The Jampro Penetrator (and its various knock-offs), the ERI (and others) rototillers, the Dielectric's, and the Celwave (formerly Phelps-Dodge) are all examples of the partial turn helix. The Shively 68xx series, and the Jampro knockoff of the Shively 6812, and the ERI 1100 series are examples of ring-stub designs.

The big electrical differences between the manufacturers is in the feed designs, and the mechanical implementations. Some are clearly superior to others. The feed design can be real crucial to the design of the antenna. It is interesting to compare the elevation patterns of the Shively 68xx series and the ERI 1100 series ring-stubs. These differences arise entirely because of feedline radiation caused the poorly balanced feed arrangement in the ERI.

When it comes to directionalizing and optimizing antenna patterns, there are some advantages to the ring-stub design, in that there is less interaction between the horizontal polarization and vertical polarization patterns. This means that horizontal parasitics can be added to the array to change the horizontal polarization azimuth pattern while having little effect on the vertical polarization azimuth pattern, and vice versa.

The loop balun feed found in the Shively 6813, 6810, and 6814 is particularly suited for 1/2 wave spaced arrays. The 180ï¿½ phase inversion required in every other element is easily accomplished by turning the coupling loop over. This eliminates the dual feed systems found in some antennas and the inverted elements found in others.

Hope this sheds more light than it absorbs,

Gray

Considering the number of firms making essentially identical knock-offs
of the Penetrator, I assume the patent rights have expired. I don't
think Jampro (or its various and sundry predecessors) were the original
patent holders for this design.

The very common ducting along the So California coast surely makes the
FCC predictions somewhat unrealistic in that specific area.

That said, there are many, many cases where the drop-in stations from
80-90 substantially reduced the interference-free coverage of existing
stations. A number of example can be found in the Baltimore /
Washington area. The stations in these cities used to cover large areas
east of Chesapeake Bay [Delmarva]. There are now Class A 80-90 stations
along the Atlantic coast which cause interference starting almost at the
eastern shore of the Bay.

The result is that there are large areas of Delmarva which lost service
from the big city stations, and can't hear the new stations due to
interference between them and the big city stations. So the people near
the Bay have many fewer interference-free signals. The strip right
along the Atlantic coast, where the big city stations were too weak for
listening, now has a number of small stations with good signals. It's a
tradeoff.

I won't get into program content because that is really not an
allocation consideration.

I recently brought up the point that, with hard-disk automation, it
would be a no-brainer for any FM station to put this information on
their RDS. I was shot down by many comments that program/music directors
saw this as just an automated way for the competition to steal their
play list. There were stories of play lists being shredded after every
shift, etc.

In view of this, do you **honestly** expect the artist and title
information display to last very long on Sirius?

I, for one, hope so - since it would put pressure for all FM stations to
use RDS for this purpose.

Today's Dallas Morning News had news of KLTY and KDGE being sold in a straight swap. KDGE will go to former KLTY owner Sunburst Media, with KLTY going to Salem.

Now to open a can of worms.....could KLTY move again to Salem's 94.9 (at Cedar Hill), and the preach and teach and infomercials (though Scott Wilder gets an 'A' from me for his afternoon talk show) go to 100.7 (at Collinsville)?

What a new owner of Channel 39 does with the facility is their business of course. But for those of you who are not in the DFW area, putting Spanish language programming on Channel 39 gives it an advantage over the two other major Spanish broadcasters. Univision 23 is full power but transmits from a short stick in Garland, TX. Telemundo 52, also at full power, transmits from one of the "broadcast hill" sticks in east Fort Worth. The stick in use is also shorter than those at Cedar Hill.
Channel 39 transmits from Cedar Hill, where everyone else is located, no doubt at around the standard antenna height there of 1600-1700 feet.

Whether or not 39 can find a niche without Univision/Telemundo affiliation is another discussion.
And though cable must carry gives all stations equal footing, the low cable penetration rate in DFW means that an off-air signal is still important. 39 does have an excellent cable channel position though, channel 10 on most systems.

It will be interesting to see if 23 and 52 can and will upgrade their transmission facilities.

Paranoia. I saw an RCS demonstration of a "listening" computer that
matched the audio from a station with a database of songs and spit out
the title and artist of every song it heard.

In the "olden days" we did it by sitting in a hotel room and writing
the songs we heard on a primitive yellow pad. Nothing we do on radio
is secret. I can very easily put together a station's playlist, clocks
and anything else relevant to its air product. What I can't do is
absolutely anticipate what new material they'll add and what the
rotation might be.

I recall a listening service (name escapes me) that monitored stations
and released hourly playlists for a subscription. Also a Monday
Morning _____ magazine (by Rich Meyer) that charted music played.

>In view of this, do you **honestly** expect the artist and title

I expect it to last and be a significant part of their sales pitch to
subscibers.

We'll see. So far I see only slogans and call letters on New York's
RDS-equipped stations.

Exactly my point. RDS will never go anywhere (except away) unless there
is some dynamic and useful content.

WETA-FM is the only station I've seen promoting specific programs on its
RDS. But that promotion is unchanged from week to week.

Ummm, the same corporate merging bean counters are in charge of the satellite
operations. What makes you think you're going to get anything better over satellite?
You're not going to pay per-use, so once they've got your subscription money, they're
not going to waste resources on something silly like programming when those dollars
are more profitably spent on marketing.

Case in point: cable. It used to be that you bought cable to get programming that you
couldn't get on the over-the-air services. Guess what? Most of the cable programming
is actually worse. And you unfortunately can't cherry-pick. I'm carrying forty or fifty
channels' worth of vacuous junk like MSNBC and EWTN just so I can get a weather
radar image every ten minutes. Cable companies do this because they know that if I were
allowed to pay for only what I use, they'd make about forty cents per month off of me instead
of forty dollars.

Am I stupid? Probably. If it wasn't for my wife (who never watches the damn thing but insists
that we need it), I probably would have dropped the service already. Q.E.D.

Can't the Mexicans do it any way they want if they don't violate the
treaty with the US? I'm sure that treaty doesn't include interference
BETWEEN Mexican stations. The treaty surely only speaks to
intereference of one country's stations to those in the other country.

Mexico uses 30 kHz for AM spacing in the same metro (except, perhaps, where
"coordination" with the U.S. is required).

The U.S. used 50 kHz until 1941 and 40 kHz thereafter.

Counter example:

1220 in (north) suburban Los Angeles (COL, Canyon Country, Los Angeles County)
and 1220 in (east) suburban Los Angeles (COL, Pomona, Los Angeles County).

Both are Class B (unlimited time) and operate with more than the minimums for
old Class IV, day and night.

So, two unlimited time co-channels are indeed possible in the same metro, not
just two stations separated by 30 or 20 or 10 kHz.

I could see a swap with Univision in the works, but I'm still not sure what Pappas will do in this market. I cannot see how 4 spanish TV stations will survive in the DFW market. 23 does well - 52 barely registers. I think 55 will be okay just because it will be the new flagship of HTVN.

I think the far more likely move would be to make KXTX a religious station again.

That would make a lot of sense - but I wonder if KLTY would really want to do that considering they've just gone through the lengthy and expensive promotional process of moving to 100.7.

Oddly enough, KLTY was originally on 94.9 many years ago. They left the frequency in 1984 or 85 when Y-95 hit the air. Soon after that, most of the same folks wound up doing the same christian format on "KOJO" at 94.1. After a year or so, 94.1 changed calls to KLTY. (they had to buy them from someone I believe)

I dislike satellite radio. I am 48. I live in a small town out of touch with big city radio. The 3 stations in my town are sat fed, and boring as hell. I miss what I call the "left hand side" of the fm dial. Not to be confused with the political spectrum, I am decidedly conservative, but a little bit quirky. I enjoy listening to the "88 and 89" on the fm dial to hear real live people talking about the music. Ok, I am lost in 1972 or something, but when I drive my car 10 hours, I want to hear people now and then, I can burn out my cds and cassttes too early.
I put up a huge antenna to pull in LA stations just to hear the idle chatter and eclectic patter. I miss it . You people in the big cities with a variety of local stations owe it to yourselves to turn off the computer and the tv, and listen to those gals and guys who are talking to YOU, the private listener. Ok I have spoken my peace......I like "people" radio.

LA's a pretty big "metro" though. I have never heard either of those signals
unless
I was within the confines of their respective suburbs, and even then....

It's a built in feature that won't go away. DMX has been using the Scientific Atlantas Digital DJ Remote which reads out the Artist, Song Title, Album name and industry code number for years and it's not about to go away. That's always been another complaint with AM/FM. They bullshit around and don't ID what's playing.

Does anybody know if there's a directory with the URLs for various city/state/regional radio-oriented message boards?

I'm familiar with a few (Buckeye Radio Newsgroup, Mid-Atlantic, etc..)....but, am wondering if there's such thing, for example: as a Milwaukee or Wisconsin/Illinois group; or a Seattle Radio Newsgroup, etc.,etc.!

Any help would be sincerely appreciate. Please contact me at my e-mail address: rdavisson@neo.rr.com.

Thank you.

Tim

3886. KPFK vs. XLNC

Newsgroup: rec.radio.broadcasting
Date: 2000-08-30 04:35:37 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <f53pqso0lahqthtbic3fsk750su67ugt9e@4ax.com>
Source record: 17669

Hot Topic: KPFK vs. XLNC

What do you get when you mix eclectic pop with classical music? A lot of freaking static if you're caught in the crossfire between San Diego and Los Angeles, that's what!

North Hollywood's KPFK, the Los Angeles outlet for Radio Pacifica that broadcasts on the FCC assigned frequency on 90.7 FM since the 1960's or earlier, had up until this past Spring, exclusivity on the frequency in Southern California, whose grandfathered 110,000-watt transmitters stretch the signal into Santa Barbara, Bakersfield, Banning, and San Diego.

It boomed into San Diego where the nearest local stations on the dial were at 90.3 and 91.1 MHz, so with a good enough radio, San Diegans could listen to KPFK with relative ease. That was, until this past February.

In Tijuana, a new classical station playing excerpts from some 400 classical works, XLNC-1, signed on at the Mexican Government assigned frequency of 90.7, causing problems for everybody trying to receive KPFK's programming, especially San Diegans who had been enjoying KPFK's program without any interference.

Although the station said it is broadcasting at a 1,000 watts, the transmitter must be either on a very high mountain in order for the signal to not only cut off KPFK from reaching San Diego, but is causing problems for people as far north as even Santa Barbara.

In San Diego, if you want to receive KPFK's signal, you have two chances: slim and none. If you live behind a hill to the South, and you're in the line of KPFK, chances are, the hill to your South will block XLNC's signal so that it doesn't reach you too well; folks living in La Jolla and Northern Oceanside (around freeway 76) might have a good shot at hearing KPFK up there.

What's the problem with having two stations on the same frequency? First, let's take a look at some of the frequencies of the two metro areas of Tijuana and Los Angeles. Both areas are separated by about 150 miles by air. In Tijuana, we have, for example, Radio Latina broadcasting on 104.5 MHz, while in Los Angeles, we have KBIG on 104.3 MHz. The only way these stations interfere with each other is with adjacent channel interference, that is, if you're too close to Radio Latina, it bleeds over to 104.3 so the disco music on KBIG gets mixed in a bit with a dash of salsa; go to Los Angeles, and Radio Latina airing Christina Agulierra's hits in Spanish gets mixed in with KBIG bleeding in Christina's hits in English!

Now when you have two stations that far apart...on the SAME FREQUENCY...then the listener who has even the most sophisticated radio

tuner in the world, is at a loss for a solution to be able to get one without the other!

The Los Angeles Times incorrectly stated that "XLNC1's use of the 90.7 spot on the FM dial was approved through the U.S.-Mexico FM Agreement." Mexican channels are not assigned by the FCC, they are assigned by Mexico's version of the Commission, the SCT of Mexico. As far as I know, the FCC had nothing to do with the 90.7 assignment to Tijuana.

This has mirrored a similar problem when in 1991, a station now known as XGLX (then XHTIM) signed on at 103.3 first, causing some interfernece with KRUZ out of Santa Barbara playing easy listening music. Then, XHTIM moved to 91.5, where it caused the same problem XLNC-1 is doing today, only back then, it interfered with KUSC's public radio out of Los Angeles. It has since moved to 91.7, but not without causing KUSC's listeners to drop off due to co-channel intereference as well as losing members pledging the station for donations.

Fast forward to 2000, KPFK lost about 1/5 of its listeners in the past six months XLNC-1 has signed on. KPFK had filed a complaint with the FCC in March alleging that XLNC1 is transmitting illegally across the border and at 30 times its permitted wattage--claims XLNC1 denies and the FCC is currently investigating.

According to XLNC owner Victor Diaz, he stated in the Los Angeles Times that KPFK believes that they have the right to cover even Tijuana and would like to keep it.

Diaz said XLNC1, which did not choose to broadcast on 90.7 but was assigned the frequency, regularly receives angry phone calls and e-mails from KPFK listeners and fears for his license now that the case is under investigation.

So if you have a 110,000 watt station broadcasting from the top of Mt. Wilson, could it still be experiencing interference from a 1,000-watt station from some 150 miles way? Apparently, people in Los Angeles who live in the line of XLNC think so as they saw their KPFK fizzle and fade away into static covered with classical snippets of complete musical works.

Is it possible that a 1,000 watt station can reach Santa Barbara? Try getting KSEE 92.9 from Santa Barbara in San Diego sometimes, and since antenna height is everything, it can reach down here on a good weather day. Sometimes, if there is a lot of humidity or clouds, the FM signals from L.A. are blocked into San Diego, so reception of KLOS and Star 98.7 would fade into static on a bad day.

Antenna height is a factor in reaching the biggest area possible since FM signals are a line-of-sight reception for the weaker stations such as the 48-watt K-Love 100.1 station out of Julian that can reach all of San Diego with the help of Mt. Palomar some thousand feet high! How high is XLNC's transmitter above sea level?

And of course, the more power you have, the more likely your signal will get through to the listener's radio, and the reason that a lot of stations are 25,000 watts and above is so that the signal would overcome any possible interference by either radio stations from out of town broadcasting adjacently to its frequency or other factors.

Is XLNC really broadcasting at 1,000 watts? In Escondido's valley behind some hills, I shouldn't be able to get it, but for some mysterious reason, I do. Back in 1995, KKOS was broadcasting on 95.9 MHz (in September, it moved to 95.7 and its transmitter from Carlsbad to Mt. Soledad), and at 3,000 watts, I could not get it from my home 30 miles way at all. It was located near an airport up until the signal upgrade and move. Wonder if there were too many hills separating my house from the Carlsbad signal?

So, when you have a radio station on a high hill and the weather is good enough, it can travel quite far into many areas, but even a 5,000 watt station at 91.1 out of Thousand Oaks can interfere with 91X on 91.1 in some pockets of San Diego county!

Is it possible that XLNC is increasing its power as Mr. Schubb from KPFK is suggesting? He suggested that the interference has grown even worse over the course of the summer. He said he hired an airwaves engineer in March who measured XLNC1's wattage at 19,000 watts, not the 1,000 it is licensed for. Where did he get that figure from?

Diaz, who owns the 90.7 radio station, maintains he is operating in compliance with Mexico's Ministry of Communications and Transportation.

The situation is complicated by the fact that the two stations are regulated by two different agencies in two different countries.

Source: Los Angeles Times

XLNC on KPFK

http://www.xlnc1.org/kpfk.html

"XLNC1 regrets if we are interfering with the enjoyment of your favorite radio station(KPFK) (both stations share the 90.7 frequency)

"It is not our intent to create interference with any station.

"We (XLNC1) did not choose this frequency (90.7 FM), it was assigned to us by the S.C.T. of Mexico in agreement with The F.C.C. in the United States.

"We suggest that you use a directional receiving antenna on your FM Tuner for better reception. Then you can have a choice of station, sharing the frequency.

"Fortunately our transmitters are not in the same location.

"KPFK transmits from Mt. Wilson in Los Angeles, California at 6,000 feet of altitude with 120,000 watts effective radiated power.

"XLNC1 broadcasts from Tijuana, Baja California at 300 feet above sea level."

Problems with XLNC's Programming

A letter writer, Walter H. Bryan, had his letter published in the San Diego Union this past Sunday.

"I find XLNC/90.7 FM deficient for the following reasons:

"It doesn't announce each selection, but wants me to do the work by going to its Web site.

"I've yet to hear a complete symphony, concerto, opera, etc. in its broadcasts.

"Music is often cut short before it's completed.

"Lack of variety in that a few selections are played repeatedly. While these selections are pleasant, there are many others which would please me, and which I never hear on XLNC.

"I listen to KFSD/92.1 FM and KDB (Santa Barbara) when driving about in Chula Vista. XLNC is no longer a part of my life."

90.7 Talk in rec.radio.broadcasting

Get this before it hits the archives (and costs $$$):
http://www.calendarlive.com/calendarlive/tvent/radio/20000825/t000079737.html

In a nutshell: Tijuana set up a station on 90.7. KPFK listeners in outlying areas
(outside of the protected contour of KPFK) are peeved because the new station (XLNC1--shouldn't that be XELNC1) causes interference....

But wait, there's more: XELNC1 is supposed to be 1 kW...but has it been creeping up to nearly 20kw when no-one's looking? Hmmm....

From: David Tanny
Newsgroups: rec.radio.broadcasting
Subject: Re: 90.7 Wars in So. Cal.
Date: 26 Aug 2000 01:24:03 -0400

I was wondering why I was receiving XLNC so well in San Marcos 45 miles north of TJ. A 1000-watter can't be _that_ powerful enough to reach that far, even with a 120,000-watt KFPK dogfighting with XLNC for supremacy on the 90.7 channel.

It's XHLNC. Mexican FMs are XH except for grandfathered AM-FM combos that
are XE allocations;

>
> But wait, there's more: XELNC1 is supposed to be 1 kW...but has it
> been creeping up to nearly 20kw when no-one's looking? Hmmm....

I think it is indeed low power... hard to hear in downtown San Diego in my

hills.

From: Doc Searls
Newsgroups: rec.radio.broadcasting
Subject: Re: 90.7 Wars in So. Cal.
Date: 27 Aug 2000 11:36:04 -0400

I first ran across XLNC1 in San Diego hotel in early July, and was astonished
that another station would be allowed to go on the air where KPFK already had
a
reasonably good signal. On paper, at least, KPFK is the biggest station in the
country: 110kw @ 2830' above average terrain. There is not a single other San
Diego/Tijuana station on the same channel as an LA station except, now
suddenly,
on 90.7, home of L.A.'s biggest signal. How could this happen? Why pick *that*
channel?

I didn't realize how powerful XLNC1 was until I listened while driving to
Santa
Barbara from the Bay Area. When I came through the pass into Gaviota, right
where 101 reaches the Pacific, I punched up 90.7. There was XLNC1. Loud and
clear. I tried the other San Diego and Tijuana majors on 91.1, 90.3, 92.5,
105.3, etc. They were all there, too, sounding about the same strength. So
were
the LA majors on 93.1, 101.1, 94.7, 104.3, etc. When I got to Santa Barbara,
most of the big LA stations, especially 101.1, were coming in pretty well.
KPFK
was fighting XLNC1 all over the place. Later in LA itself, I noticed that KPFK
often had that other-station frying sound going on under the signal. By
contrast, 105.1 (no longer KOGO but K-Mozart or something), which transmits
from
a tower very close to KPFK's, had a killer signal pretty much everywhere I

heard
KPFK's sounding lousy.

This last week I was back in Santa Barbara, and XLNC1 wasn't nearly as strong, but it was still there.

It's worth noting, by the way, that KPFK gains its power with a 14-bay (give or
take) antenna located close to the ground and back from the edge of the ridge on
Mt.Wilson where most of the LA FM transmitters are distributed. This system concentrates all the power in a narrow band aimed toward the horizon.This saves
electricity, but is not an ideal setup, since it involves many nulls in the vertical plane (meaning weak zones looking downward toward the metro from the transmitter). The site is also shadowed toward many areas seen directly by weaker stations on higher towers at better spots on the mountain.

The issue is money. If KPFK had the pockets of a commercial station, it would probably be radiating from a better site on Mt. Wilson on a higher tower with marginally less power and the best signal in town.

Still, something needs to be done to move XLNC1 off this channel. Dropping it to
the licensed 1kw (at 300 feet or something) isn't enough.

Note: XLNC1 has a Web site, and a special page for annoyed KPFK listeners: http://www.xlnc1.com/kpfk.html

It says:

"We (XLNC1) did not choose this frequency (90.7 FM), it was assigned to us by the S.C.T. of Mexico in agreement with The F.C.C. in the United States."

Those are the parties that need to work this out.

"We suggest that you use a directional receiving antenna on your FM Tuner for better reception. Then you can have a choice of station, sharing the frequency."

And what about in your car? Your apartment? Come on.

"Fortunately our transmitters are not in the same location.

"KPFK transmits from Mt. Wilson in Los Angeles, California at 6,000 feet of altitude with 120,000 watts effective radiated power.

"XLNC1 broadcasts from Tijuana, Baja California at 300 feet above sea level."

Note that they exaggerate both KPFK's wattage and its antenna height (2380 feet
above average terrain, and probably less than 6k feet above sea level too), while neglecting to mention their own wattage.

Fishy stuff.

FM allocations within 320 km of the US/Mexico border are governed by the US-Mexico Working Arrangement, an international treaty signed by the governments of the United States and Mexico.

It provides for two ways to allocate FM channels in the region: by the table of assignments and by contour allocation.

Included in the Working Arrangement is a Table of Assignments which allocate specific FM channels at specific powers and heights to specific communities. Interested parties may apply by right for these channels as long as certain mileage separations are maintained between facilities.

Allocations that are established by contour protection must be referred to the other government for concurrence, which shall not be withheld if the proposed allocation meets all the pertinent coverage and interference rules. These rules state that a station's protected coverage contour shall not overlap the interfering contours of any other stations on the three adjacent frequencies above and below.

KPFK has enjoyed considerable coverage BEYOND its protected contour because of the lack of cochannel and first channel adjacent stations to limit its coverage. The arrival of XLNC1 has put an end to this.

The scheme used to predict the extent of the coverage contour and the interfering contours are at best an approximation of the real world, but, bye and large, work as a REGULATORY scheme. There are situations where they are overly conservative, and situations, like the one KPFK finds itself in, not restrictive enough. The FCC has repeatedly held that full service stations are protected from interference only to the extent the FCC allocation system predicts.

In short, the new station in Tiajuana is apparently perfectly legal and conforms to international agreement between US and Mexico.

Some have speculated that XLNC1 is operating at a power level or an elevation that exceeds that in its license. It would be interesting to

find out if this true and whether the Mexican government would be cooperative in correcting this if it were. If it operating legally, then KPFK listeners are just going to have to accept it. XLNC1 has as much right to exist as KPFK.

Interference considerations between stations in Tiajuana are a Mexican domestic matter and therefore do not fall under the purview of the Mexican/American working Arrangement.

I have never had the pleasure of doing any domestic Mexican allocation studies and am not familiar with their allocation scheme.

Gray

P.S. The NAB (the intellectual and moral successor to the American Tobacco Institute) notwithstanding, I think the American 2nd adjacent standards should be much relaxed, if not eliminated entirely.

3890. Prediction: was Questions About The Future of Radio

Newsgroup: rec.radio.broadcasting
Date: 2000-08-31 12:54:35 UTC
From: Lee Kent <leekent@radioware.net>
Message-ID: <8olkghptm1@slb3.atl.mindspring.net>
Source record: 17696

Far be it for me to denegrade a new thing so I shall not.. but I shall make a few educated predictions about the future of new things having to do with radio....
1: Most Internet based muzak service clones will go out of business within a year no matter how much their proponents espouse their elegance and superiority over broadcast stations.
2: Commercial broadcasting stations having embraced the Internet to stream their stations will continue to serve their local sales clients and more and more ignore the world audience as their clients still see no benefit to them in such wide area distribution.
3: Streaming companies who offer multi format music only channels to be placed on radio station web sites will be toast within 18 months when local clients start asking why the account exec is touting their being on the web too while the station gives listeners a chance to change channels on line.
4: Almost all (but not all: that would be a perfect world) pundits of Internet based music services will eventually realize that technology for technology's sake is fine on the drawing board but never succeeds in the living room unless it provides a real benefit to the consumer. Venture Capitalists have already started to learn this and have slowed down the rush to invest in anything with an I or an E in the name. Internet Radio is a pure play business and pure play businesses are simply not working no matter how much passion has gone into defending them. People are interested in a new thing until they find nothing new in benefits to them. The Internet is in the mode now. The public (make that consumers) are becoming jaded regarding the world wide web even while those who are trying to make it a delivery medium for streaming music alternative to local, client supported radio are just becoming vicious in their defense of it.
5: Mega corporation commercial radio stations are going through a phase most businesses go through in a buying frenzy: Too much, too soon requires assembly line management to control while assembly line production quality and services results in bland acceptance by consumers eventually and will force the mega corporations to divest stations to re-coup cash flow as they are so far into the load of debt that a single serious downturn in the economy will cripple the ability to borrow more.
6: So far mega corporations have been quite good at managing their resources by cutting costs but cutting costs has never made profit. Making profit itself implies growth and that little gem of business acumen will catch up soon.
7: An EEO issue is looming in the background at the commission after the release of the most recent rules on EEO for broadcast and cable stations and depending upon the outcome of the upcoming national election: properties will be forced to actually do more than give lip service to equal opportunity and post their mandated reports.
8: The real talent in the industry will begin (have already done so) to

become disheartened with the previous geography hopping career patterns that no longer lead to career growth and drop their geographic market bigotry by joining small market locally owned stations just to enjoy working in radio again.
9: Disco will return as the format of choice for mega corporation owned properties. (OK I had to have one that would not come true)....

Not every country in the world uses US criteria for adjacent channel
separation. For example, on AM, Mexico City (itself, not suburbs or
rimshots) has AM stations on 690, 710 and 730. They work fine, too.

There are a number of Mexican 20-kHz separation same-city AMs, the most
obvious being 690, 710 and 730 in Mexico city.

interesting but with dallas having 80% cable penetration .. does it
really matter how much power one has anymore since the signal from the
cable system is perfect for all?

From: "Rock-it Radio listeners club" <Rockitradio@earthlink.net>
Subject: Al & Lane's shows = 2 More new shows on the Rock-it

Rock-it Radio listeners club - http://www.rockitradio.net

Hi Again Folks,

We are happy again to report that 2 more new shows are in our
archives page... (http://www.palmsradio.com/rockittext.htm)
shows #202 and #203. Here is a rundown on both shows.

~~~~~~

Al "Cool Daddy" Smith does tribute
to Norman Petty in show #202

Al "Cool Daddy" Smith our DJ out of Brampton, Ontario Canada
has come up with a great show with plenty of obscure Rockabilly as
he pays tribute to Norman Petty and his Nor Va Jac Studios in
Clovis, New Mexico of the late 50's and early 60's. The show also
features some great rarities of both early Buddy Holly and also the
band The Fireballs in this show. Here is the playlist.

1. Starlight Jack Huddle 1957
2. Little Ditty Baby Don Webb 1959
3. Leave them Cats alone Don & the Roses 1958
4. Lookie, Lookie, Lookie Ronnie Smith 1959
5. That'll be alright Ivan 1959
6. School is out Terry Wayne 1958
7. No minors allowed Ramona Locke 1958
8. Believe me Jack Huddle 1957
9. Fireball The Fireballs 1958
10. Because I love you Bob Montgomery 1959
11. My Suzanne Earl Henry 1958
12. You've got love Peanuts Wilson 1957
13. Right now Don & the Roses 1958
14. A tiny kiss Ronnie Smith 1959
15. I don't know The Fireballs 1958
16. Since you went away Don & the Roses 1958
17. Jitterbuggin' Five Bops 1958
18. Wheels String-a-longs 1961
19. Party Doll Buddy Knox 1957
20. Rock-a-bye Rock Buddy Holly 1956
21. Maybe Baby (1st version) Buddy Holly 1957
22. Because I love you Buddy Holly 1956
~~~~~~

23. I'm gonna set my foot down Buddy Holly 1956
24. Changing all those changes Buddy Holly 1956
25. Blue Fire The Fireballs 1960
26. Blues in the Night The Fireballs 1960
27. Bluesday The Fireballs 1960
28. Wang Wang Blues The Fireballs 1960
29. Baby, won't you come out tonight Buddy Holly 1956
30. It's not my fault Buddy Holly 1956

~~~~~~

Lane Quigley & the Memory Lane Show
come up with another popular
Forgotten Top 20's in show #203

On the newest Memory Lane Show, host Lane Quigley answers a slew of
listener requests, and also shares some great but forgotten rock and roll
from the fifties and early sixties.

Lane includes a great unreleased R&B track from the 50's that his father
produced! Here's a great mix of r&b, rockabilly, pop and jump blues for
your listening and dancing pleasure:

1. Voodoo Voodoo - Lavern Baker 1958
2. Who Can Explain - Frankie Lymon & The Teenagers 1956
3. Don't Come Knockin' On My Door - Charlie Rich c.1958
4. Go 'Way Christina - Jimmy Soul 1963
5. I Want a Boy for my Birthday - The Cookies 1963
6. Priscilla - Eddie Cooley & The Dimples 1956
7. All Night Long - Rusty Bryant 1954
8. Desire Me - Sam Cooke 1958
9. Mary Lee - The Rainbows 1954
10. Say Man - Bo Diddley 1959
11. Modern Romance - Sanford Clark 1956
12. Papa Loves Mambo - Perry Como 1954
13. Mardi Gras Mambo - The Hawketts 1955
14. Surfer's Twist - The Defiants 1962
15. Rockin' & Jumpin' - Honey Brown c.1952
16. My Dream - Dino & The Diplomats 1962
17. Bloodshot Eyes - Wynonie Harris 1951
18. Dynamite - Brenda Lee 1957
19. Dungaree Hop - Plas Johnson c.1956
20. Roll With My Baby Tonight - Ray Johnson & The Highlights 1954
21. Please Betty Jane - The Dellwoods 1961
22. End of the Road - Jerry Lee Lewis 1956
23. Something Special - Roland Stone
24. That's All - Etta James 1955
25. Motorcycle Mama - Sailcat 1972
26. What Do You Do - The Channels 1956
27. Come Back Baby - The Cliques 1956
28. Four Letter Word - Johnny Preston c.1960
29. I Can't Rock & Roll To Save My Soul - Pearl Bailey 1956
~~~~~~

30. I Want to Rock & Roll - Scatman Crothers c.1947

both shows are in our archives right now to download!!! just go to our archives page and click on the show you want to listen to at: http://www.palmsradio.com/rockittext.htm

~~~~~~

Got Pets?????????

Right now Pets.com is having a major clearance sale on many of there items. And when you shop and order off of the Rock-it radio webpage besides saving money on pet goods... you help keep the Rock-it on the air. Check it out.... it's free to look and shop and compare!!!!
go to our website at http://www.rockitradio.net and then scroll down until you see the pets.com banner and click to it.
First time users also get $10 off of there first purchase.
~~~~~~

Doo Wop widens lead over Rockabilly

If you haven't voted yet or noticed on our website at
http://www.rockitradio.net
we have a place in our links section where it asks you to vote for what style of music you prefer to listen to on Rock-it Radio.
For the first year and 1/2 Rockabilly of the 50's has always led.
Now the last 3 months Doo Wop has caught up, and passed and stretched the lead over Rockabilly. If you haven't voted yet you are more then welcomed to come on in and vote... right now with 427 votes in here is the latest tally.

1950's Rockabilly 161 votes 38%
1950's Doo Wop 174 votes 41%
Rockabilly today 92 votes 21%

~~~~~~

Some News from Rockabilly fest 2001

ROCKABILLY FEST 2001 in Carl Perkins home town of Jackson, Tennessee. It looks as if it will surpass last years festival which drew the largest number of rockabilliy artist in history! From Brenda Lee to Bill Haley's Original Comets, Narvel Felts to Ace Cannon, Billy Burnette (fleetwood mac 10 years)
toEric Heatherly, Marty Stuart to Stan Perkins (Carl's son), Wanda Jackson to Barbara Pittman, Paul Burlision to Rocky Burnette, Maria Elena Holly to The Original Cricketts, Tommy Alsuup to Big Al Downing, Sonny Burgess and the Original Pacers to Eddie Bond,
D. J. Fontano to Dave Crimmen, Gary Sax, 10-0-C, W. S. Holland (Original drummer on Carl Perkins gold record of Blue Suede Shoes) Burl Boykins to Shelby Singleton owner of the legendary Sun Studio's,
Mac Self to Ace Cannon, and on and on and on
~~~~~~

Henry Harrison
for more information telephone 1 901 427 8521

~~~~~~
Also, if you haven't done so yet don't forget to catch our very historic
broadcast of Lane Quigley
with DJ legend Hunter Hancock doing his first show exclusively with Rock-it
Radio in our archives
at show # 197. at http://www.palmsradio.com/rockittext.htm
Hunter Hancock is credited for being the first DJ ever to have his own show
dedicated entirely to
what was then called "race records" later to be known as Rhythm and Blues.
Catch the whole
story on Rock-it Radio!
~~~~~~

Well that's it pretty much for this newsletter we hope that you enjoy the
two new shows and remember we are always happy to do requests and
dedications just e mail us here at the Rock-it .... our e mail address is:

>interesting but with dallas having 80% cable penetration ..

It may be true that 80% of Dallas residents have access to cable, but I don't believe the actual subscription rate is any where near that high. In my small Dallas neighborhood, I only know of one family that is still connected. Everyone else seems to have a dish and their old TV antenna. We all got very tired of bad pictures and poor service.

Maybe my neighborhood is atypical. I'd be curious to know.

Message-ID: <8ebtqs45afv66ojq4bipfkvni11ungbn88@4ax.com>
Source record: 17703

I think most people like having an announcer on the air. What they don't like is the incessant, insipid, lowest common denominator of stupidity and ignorance that goes with it. Radio can do better.

I'm 37 and I have lived within range of two big-city radio markets most of my life. This sort of happy "dumb-blond" talk turns me off so much that I leave the radio off more and more during my commutes. You'd think advertisers would be interested enough in my demographic group that they'd say something to the program directors. But if they are, it's not helping.

I'm not trying to start yet another "why radio sucks" thread. I'm merely pointing out that this is a fact of life which seems to be chasing more and more away from the otherwise desirable local content of radio and on to other mediums such as books on tape.

Would people listen to satellite delivered radio content? Maybe. I think it's worth noting that if it does succeed it will introduce enough competition that local radio stations will be forced in to spending better money on better programming talent.

We'll all benefit then.

I'd like to know who says the DFW area has 80% cable penetration - that's flat out not true. Nielsen says it's 50.2%. Another 13% have DBS. We have one of the lowest cable penetration rates in the country. Having a strong signals is crucial in the DFW area.

>with a variety of local stations owe it to yourselves to turn off the
>computer and the tv, and listen to those gals and guys who are talking
>to YOU, the private listener. Ok I have spoken my peace......I like
>"people" radio.

The thing that has to be emphasized here is that satellite radio is *not* the satellite-fed formats that over-the-air stations already do *or* the DMX/Music Choice kind of no-DJ talk channels. Both XM and Sirius plan to have for a lot of their music channels personalities introing the music, live in many cases. The main difference that instead of pretending to be local personalities, they'll have the freedom of admitting that they're talking to the whole nation. The main difference is that it's either commercial-free or very limited advertising (considerably much less than the 20 minutes an hour Chicago stations seem to be averaging (or more!), as reported in today's Sun-Times):

http://www.suntimes.com/output/feder/feder31.html

The news/talk/entertainment programming that will fill up the other 50 channels of XM and Sirius will be in many instances live and I think could be considered "people" radio.

I don't pretend that satellite radio will be the answer to all of radio's woes, but it has the potential to give the listening audience an alternative by offering underepresented formats and present formats without the potential annoyance factors of today's radio. If it gives its conventional broadcast competition fits, good. It may just make those stations better and less complacent (and may make them rediscover that being local gives them a competitive edge over the satellite guys).

Source record: 17707

Does anybody know what jingle package WCBS-FM used before JAM's "Do It Again", in the late 80s? They had more in the lower brass (trombone/bari sax?), and a cool three-note riff after the frequency was sung. You can hear it at 1:50 of this clip:

http://musicradio.computer.net/images/ing971.ram

I'm trying to get a resing of this, but the JAM folks didn't know what package it was, and WCBS never responded to my e-mail. TIA.

Complete List of News Sites at
http://www.geocities.com/SunsetStrip/4656/03lnk005.htm

Randy Dotinga - North County Times
http://www.nctimes.com/preview/radio.html - Latino DJs few and far between on local radio dials; Disc jockey Dawne Davis has left classic rock station 103.7 The Planet; KPBS-FM is revising its schedule

Chris Carmichael - sdradio.net http://www.sdradio.net - Aztec Football began on KOGO Thursday; Join KUSI's Rod Luck and KPOP's Ernie Myers on Wednesday, Sept. 6; Clear Channel completes AM/FM merger in $23 billion deal; Hear weather on 7/39's SAP (cable 7 on most systems); JoJo Kincaid returns to San Diego mid-September to host the morning show at the Planet, KPLN-FM 103.7; Rod Page let go from KPOP; McInnes and Lewis voicetracked on Santa Barbara's KTYD; Hot Country vs. KSON in billboard war;

Ken Leighton - San Diego Reader - who cares?

Robert F. Gonsett - CGC Communicator http://bsd.bext.com/cgc/ - Chris Carmichael plugs his sdradio.net website; other engineering issues

AND...

XETV-DT?

Communicator readers have been asking for the official call sign of XETV's DTV station on Channel 23 in Tijuana, Mexico.

According to the FCC's CDBS database, the call sign is XETV-DT. According to the instrument of authorization granted by the SCT in Mexico City, the call sign is XETV-DTV. The call sign is not XETV-TD ("television digital," putting the adjective after the noun as is common in Spanish), as some had speculated.

Don Barrett - Los Angeles Radio People http://www.laradio.com/ - Howard Stern Voted #2 Los Angeles Radio People

recap: #10 Mark & Brian
#9 Harry Shearer
#8 Chick Hearn
#7 Tom Leykis

#6 Ryan Seacrest
#5 Kevin & Bean
#4 Vin Scully
#3 Phil Hendrie
#2 Howard Stern
Who's #1? I predict George Putnam, but I think the late Gene Autry would win.

AND...Los Angeles Radio People 2001: A Radio Odyssey; LARP - Favorite Movies about Radio or Movies with Incredible Soundtracks that Received Airplay; Clear Channel's KFI Begins Changes;

AND...

Salem Minus One. Salem Communications Corporation, the leading provider of Christian-oriented radio, electronic and printed resources, has announced that it has sold KLTX to Hi-Favor Broadcasting, for $29.5 million. The sale was completed on August 22; two days before Salem closed on the purchase of eight radio stations from Clear Channel Communications, which includes two stations in the Los Angeles market. Edward G. Atsinger III, president/ceo, commented: "Salem Communications determined its divestiture of KLTX was strategically advantageous at this time, particularly in the light of the fact that two of the stations we acquired from Clear Channel are in the L.A. market and overlapped KLTX's coverage."

Radio Stocks Up; George Putnam...not dead; too many other headlines.

Radio Spectrum Los Angeles http://www.radiospectrum.net/082100.html - Complete Summer 2000, Phase I Ratings! Clear Channel and AMFM Now Are One! The First Clear Channel Change! Emmis and Country! FOX Sports Radio! Plus...KBIG, KYSR, and so much more!! And...Another "Aircheck Of The Week" Winner!

Support good music. Quit buying the bad songs!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!
Al-Team #80 (alt.music.weird-al) http://www.davesfunstuff.com/ for South Park, Radio/TV, Dr. Demento, Today in History, Funny Stuff, "Weird Al" Yankovic, Icons, Eight is Enough, TV Guide Parody, Celebrity Birthdays, etc.
If Susan Lucci can win an Emmy, anything is possible!

News From 20 Years Ago This Month

No, I haven't been doing radio news THAT long, but the month of August 1980 yielded some interesting highlights of radio news in San Diego.

KPRI 106.5, the station billing itself as "San Diego's Best Rock", has boosted their power up to par with eight-year-old KGB, calling itself "The Rockin' Home".

With the signal boom to 50,000 watts, KPRI would be heard from all over San Diego county.

XEMO 860, the station that had been broadcasting a religious lineup in English, has been ordered by the Mexican government that they can't do that anymore, as can't XETV 6.

KMJC, the adult pop station billing itself as "Magic 91", has decided to drop its low-rated format and pick up the religious format abandoned by XEMO, which chagned to a Mexican music format.

KMJC kept the call letters and soon began making their call letters stand for "King and Master Jesus Christ"

Jesus lives, Jesus heals, Jesus is coming again! Mark my words. He will rule Earth again. I don't know when, so don't ask me.

B100, the station formerly known as a Top 40 station playing rock and disco along with the adult contemporary selections, recently unveiled the ads touting its new grown-up adult format.

It said something like this, "Are you afraid of hard music? (a postman plays some heavy metal rock on his cassette player in order to scare the attack dog away) Are you sick of moldy oldies? Have you outgrown bubble gum? Then switch...to B100."

Apparently, the ads worked as boomer listeners looking for something not as quiet as KYXY or mellow KIFM had found a choice that better fit their listening tastes.

The actor's strike continues. The fall television season is delayed until further notice (October 27 is when the season began after an agreement was reached the following month). NBC decided to bring in the miniseries "Shogun" early in order to jump start the viewers as well as using it as a

springboard to promo its World Series baseball telecasts for the following October (it alternated with ABC, which took the even years).

Powers Booth accepted the Emmy in the CBS TV movie "The Guyana Tradgedy" and was jeered by the audience. Haven't these strikers shown any sense of maturity at all? They're the ones that screwed us viewers up as I took some night classes at Grossmont College instead of dealing with the reruns. Only a few of the actors and actresses showed up as presenters in the 32nd Emmy Awards, which lasted, well, 30 seconds so it seemed. Nobody seemed to boo actress Susan Richardson when she presented an Emmy to a winner, who, like the other winners, didn't show in order to show support for the actor's strike.

The TV actor's strike didn't affect any of the reality programming including NBC's "Real People" and ABC's "That's Incredible", as well as its "Monday Night Football" telecasts with Frank, Don, and Howard. NBC also premiered its new reality series "Speak Up America" to poor reviews.

September 14, 1980 was also the big date that cult parodist "Weird Al" Yankovic appearred live on the Los Angeles version of the four-hour live Dr. Demento Show. Al first met future drummer Jon "Bermuda" Schwartz on the radio set. While Bermuda beat on the accordion case, Al sang and recorded his classic hit "Another One Rides the Bus", which was later recorded for his first album out in 1983.

20th Anniversary of The Mighty 690

Also in the summer of 1980 came this radio station launch...The Mighty 690, playing a rockier version of a Top 40 format than competetor 13K (KGB-AM 1360), which played anything from the B-52's and The Lizards to Barbra Streisand and Christopher Cross (Sailing, Zzzzzz)

Booming into Los Angeles from a 50,000 watt transmitter in Tijuana (now in Rosarito), the Mighty 690 took Southern California by surprise as it not only provided an alternative to the mixed-up 13K or the "grown-up" KYXY-esque B100, but it also gave some Top 40 stations in Los Angeles such as KIQQ and KFI, a run for the listeners as Mighty 690 billed itself as a Los Angeles station in the top-of-the-hour station I.D.'s to get listeners up there to also listen.

The Mighty 690 was also an answer to 13K's cluttered format as it billed itself as "Clutter-Free". Eventually, in March 1982, 13K lost enough listeners to be convinced to change formats to an audio version of CNN2 (now CNN Headline News), then its current KPOP format of nostalgia.

On January 10, 1983, Mighty 690's low-rated station, 91X playing straight rock and roll without any noticable personality, changed formats, but not its handle, to alternative rock based on the successful formula Los Angeles' KROQ 106.7 pioneered in 1978. The first song on the current 91X? "Sex" by Berlin.

In November 1983, easy listening 102.9 became Top 40 KS-103 playing the hits in FM stereo, a band that hasn't had the format since B100 "grew up" in early 1980. With the help of Crazy Dave Otto and Dan Fogel, the listeners switched from AM to FM to hear the hits in stereo.

In the fall of 1984, the XTRA said goodbye to The Mighty 690 and switched to golden oldies from the 50's and 60's, XTRA Gold 690, also featuring Super Gold Saturday Night and Soupy Sales. The late Wolfman Jack broadcasted some afternoon shifts from an XTRA studio in Hollywood for a couple of years in the late 80's.

It went talk circa 1988. In early 1990's it became XTRA Sports 690 and for about three years, simulcasted it on KWNK 670 out in Simi Valley until 1994.

In 1996, the XTRA Sports moniker and its sports/talk format spread to other stations in Southern California beginning with Jacor's purchase of KIIS-AM 1150 in Los Angeles and rechristened it XTRA Sports 1150 (KXTA) with their own programming (it acquired the Los Angeles Dodgers broadcasting rights for broadcast beginning in the 1998 season), then in 1998, Jacor purchased AM stations in Santa Barbara 1340, San Bernadino 1350, Lancaster 610, Canyon Country 1220, and other cities, where KXTA L.A. then began feeding them the XTRA Sports programming to cover the whole region.

XTRA was licensed in Tijuana as their Spanish ID calls announced through the 80's, but now says Rosarito in the 90's.

More history on 690: A reader recalls XTRA trying out an early form of the original Kahn AM Stereo System in the mid 70's. They advertised that if you turned on one AM radio to approx 688 kHz and another radio to approx 692 kHz you could get the left and right channels of a stereo signal. Strangely enough, it seemed to work (or maybe my imagination wanted it to!)

XTRA was XEAK with a Top 40 format until May 6, 1961, when "XTRA News" began.

It changed to Beautiful Music on 4-2-68, booming the easy listening music to AM radios all over the Southland, and in the daytime, east to Yuma.

For more information on the history of 690...

From http://www.geocities.com/Hollywood/Academy/5515/xtra.html - The XTRA 690 Page has a history of the frequency.

Support good music. Quit buying the bad songs!

When did it move?? I programed XTRA during the later Easy Listening
years (around 1980) for 6 years and the transmitter was in Rosarito
all that time, up to its change to Oldies and many, many years before.

The 91X site was built in Tijuana near Colonia Libertad.

When did it move??
>>

Perhaps a year or so ago.

Jacor engineered the move and the increase from 50 kW DA-2 to 77 kW-D, 50 kW-N, DA-2.

The old Tx site was taken over by condos.

Checkout the new and old patterns (new: XETRA1, old: XETRA).

Preference is given to service to Baja California (N and S), with most power being directed there.

It would appear that the justification for 77 kW input days is that that particular power sends the same RF field towards L.A., days, as the old pattern did with 50 kW input, days.

Mexico has a number of non-conforming stations (stations operating in excess of the class maximum, days).

Lee;

Well thought out. About the only thing I would disagree with is the bland acceptance of the audience part. I think part of the reason that people are surfing around on the net looking for something that resembles radio and auto companies are tripping over themselves to sign with Sirius and XM are that they aren't getting what they want from traditional radio. If they were I don't think we would be seeing the drop in cumes that we have seen.

I think that the auto company interest in any type of accessory has to do
with the possibility of profit, and is far less related to any knowledge of
listener dynamics.

3911. One year has passed

Newsgroup: rec.radio.broadcasting
Date: 2000-09-02 04:44:27 UTC
From: Cindy <writeit@execpc.com>
Message-ID: <39B08E57.850CBF5A@execpc.com>
Source record: 17717

This is a general statement to Airwaves fans. I meant to get this out sooner, but I have been having some computer and ISP problems and couldn't get online.

It has been one year since Bill Pfeiffer, founder and creator of Airwaves Media web site and newsgroup, Airwaves Radio Journal and, I think, the Old Time Radio Journal, was killed in the car accident in Apple Valley, Minnesota. Since then, the stability of Airwaves had been questioned and challenged, but it has withstood it all. Thank you.

Although several people have asked and others have speculated about the accident, little was ever said. Now that the year has passed and the trial against the other driver is over, it seems as if some of the details should be at least mentioned.

The week of July 11-16, the driver of the car that struck Bill went to trial. His name was Nick Hanson, who at the time of the accident was 18 years old. I was in Minnesota for a convention and was able to attend the first day of the trial.

The charges were criminal vehicular homicide (a felony) and careless driving (a misdemeanor). A grand jury decided to pursue the case on the grounds that, in part, a reconstruction report stated Nick was traveling 77 miles per hour and Bill was traveling at 7 miles per hour at the time of impact. Bill was making a lefthand turn from his westbound route into a subdivision while delivering pizzas for the Apple Valley Pizza Hut. Nick was traveling down a hill heading eastbound. Both were on a four-lane road that was posted at 45 mph. The eyewitness reports varied as to which lane Nick was driving in, whether he crossed into another lane before impact, whether Bill was hit head-on or t-boned on the passenger side. From the condition of the car, he was t-boned. Nick and at least one witness, who was a passenger in the car but did not have a license himself, stated Nick was traveling at 55-65 mph.

The accident occurred at 6:43 p.m. on September 1, 1999. When I received the first call at approximately 9:40 p.m., the police chaplain told me they had thought the sun had been in Bill's eyes and he may not have seen the other car. That information was not stated in the court case.

Bill was killed instantly from all accounts. He had massive head and chest injuries and a lacerated liver. Several of the first people on the scene were off duty medical personnel. They tried to revive him, but could not due to the extent of the injuries. I have personally spoken to them.

The jury found Nick Hanson not guilty on all charges, in part because of a botched reconstruction report. The reconstructionist used the wrong vehicles for both Nick and Bill when he determined the speed at which the impact was. When reconsidering the speed, it was determined that the car used for Nick was smaller and lighter than he was actually driving and the one used for Bill also was incorrect. That meant the speed may not have been quite as excessive as first determined. The county attorney's office knew this was going to be an issue because Nick's attorney sent a private investigator to talk to me and he told me about the incorrect information. However, it was too late to change the report and issue another one, according to the county attorney's office. When it was brought out in court, the county attorney asked for a recess to determine the new speeds, and the request was denied.

The court has spoken on the matter. In spite of admitting to speeding, Nick will not get a speeding ticket because the careless driving was supposed to be it, in essense, according to the county attorney office. As some of you may know, that office cannot go backwards now and issue a speeding ticket. The jury decision is final.

The law states only those in direct relation and directly reliant on the income of the deceased can collect on a workers' compensation claim. Therefore, this would be Bill's half-sister, but she lived in Illinois, so it may be difficult to collect. An attorney is working on this for us though. This is still an open situation so I will not say anymore on it.

Now for the Airwaves update: Pat still is not available to take care of moderating the newsgroup. All I feel I am allowed to say at this time is that he is still recovering and has some personal business to attend to. Additionally, as a result of my computer playing games, I have had my email files disappear or move into cyber quadrants unknown and do not have phone numbers, email addresses, etc. of some people who said they would like to help with Airwaves. I must apologize, but I am asking that those who can and/or willing to help out in some way, please send me a personal email. Additionally, I planned to update the site, but I needed to learn a bit about Unix first. I am, seriously, going to be updating that in the next one to two weeks if

not sooner. As part of that, and as part of Bill's former site, I am looking for a few people who would like to be "media watchers" and are willing to write periodic pieces on radio in their area, especially the metropolitan areas. If you are willing to write those articles or any others for Airwaves, also drop me a direct email.

My dream is to write a book about Bill and Airwaves, as it was one of the first web sites and newsgroups out there before the Internet was the
Internet. This will take a while as there are a few people that I need to contact who know even more about Bill than I learned in the 10+-year relationship. The proceeds will be used to set up a permanent scholarship fund for radio students.

Again, I need to publicly thank John Levine for keeping things going as smoothly as they have been and for hosting Airwaves. Without him, none of this would be feasible or possible. Also, I want to again thank everyone on the group for their continued support of me (and Bill's dog Jake), Bill and all that Airwaves represents. Keep posting and keep discussing with one other; it's what made this group and the radio medium what it is today.

I agree. As Chip pointed out, there are are already enough Spanish TV
stations in the region. I'm not sure if another Spanish TV station is
going to work in D/FW. And as you said, none of the Spanish radio
stations show up in ratings.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun.

Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

A friend of mine engineers a two-hour live jazz show
every Saturday afternoon from KMHD, Mt. Hood Community
College in Gresham, just east of Portland, Oregon.
It has been going for many years and features both
local and touring jazz artists. NB: This is also
the home of the Mt. Hood Jazz Festival (in August)
which has been attracting national acts for many
years running.

>>

If clear channels stations were indeed originally intended for such use, then the FCC (or its predecessor) would have insured that there was an equitable distribution of such stations across the continental U.S.

Instead, of the 25 such stations allocated by international treaty to the U.S., only two such stations are west of the Rocky Mountains.

A quick check of the applicable FAA maps shows that there was no preference for Class I-As, over any other class stations, for inclusion in these maps as secondary NDBs.

Is there a site that I can get sound effects/sound clips that radio stations grab.. I say this because I hear the same sounds on different stations (cities) so some I suppose they are global. Thanks for any help.

Amen. Auto companies make deals based on cost and profit, not on any
listener dynamic. It's yet another multi-hundred dollar accessory that
can be packaged in leases. The real test of the demand for any new
service is the aftermarket product where people actually plunk down
several hundred dollars and don't have the monthly cost buried in a
lease agreement.

Personally, I like both Sirius and XM and hope the service works well.
I think it'll bring more people to radio and inspire terrestrial
stations to improve their local news departments and community
service.

It's a sign of very good times when all the population has to worry
about is "cookie-cutter" radio. To compare the concerns of Soviet
citizens under murderous dictators and witnesses and victims of the
Holocaust is foolish beyond description.

Outside the Americas, callsigns for broadcast stations are nearly
unheard-of. (I was somewhat surprised when a Canadian DXer managed to
turn up callsign assignments for a number of larger European MW
stations. I'd always figured they didn't even *have* calls - certainly
they're never used on the air.)

I believe - but certainly can't prove - that the legal ID requirement
first arose from the need of the Dept. of Commerce (predecesor to the
FCC) to know what station they were listening to when they heard a
violation. Direction-finding wasn't nearly as good as it is today, and
with a less-crowded band, spotting violations a few hundred miles away
wasn't out of the question.

I would suggest it's mostly inertia that keeps it on the books.
Personally, I see absolutely no reason FM stations should be required to
ID if they're transmitting their calls in their RDS stream. (even if
they don't, it's quite a stretch to justify the ID regs)

City-of-license regulations are also rather difficult to justify these
days.

<snip>

Yeah. Radio Stinks. So do most media. The problem is that until
very recently there were no other outlets for an individual to go
directly to the public with something interesting. They all had to go
through an editor or program director or some other entity...

The Internet is changing that. That's the big issue behind the MP3
story. No matter what the big recording companies, big news
organizations and radio program directors do, they're going to get
hurt as more and more users take advantage of more and more bandwidth
to distribute music, pictures, and text.

The problem is that very few have figured out how to make money using
the Internet as a distribution resource. Likewise, there aren't many
ways to make a resource which is basically free to all listeners
profitable.

And yes, radio program directors have a corporate structure to adhere
to. It is indeed stupefying and uncreative --just like most corporate
structures. The problem is that nobody has managed to figure out how
to do things differently and consistently make money at it.

I don't have any solutions --do you?

Sound like a vicious circle. If the Internet can't be profitable it
will cease to exist as a distribution system and it'll revert back to
being an email and file sharing network.

We've already seen unconstrained venture capital recover their wits
and actually require business plans that, at least, hint at the
possibility of profit. That sure made some Internet companies see bad
hair days as they pulled most of what was left out.

The problem I see is where people who are content providers link
themselves with specific delivery systems. If an even better one comes
along, they'll be dead in the water. It's going to be tough, though,
to find one as efficient as broadcasting.

The jury is still out on whether big media organizations will wind up
controlling as much mindshare on the Internet as they do on older
media. They are setting up shop on the Internet, positioning
themselves to direct people who already use their established media to
their online content.

3926. Q: MiniDisc, DAT amd PC-Based Audio

Newsgroup: rec.radio.broadcasting
Date: 2000-09-06 01:46:48 UTC
From: Larry Berger <slb@telerama.lm.com>
Message-ID: <srb8c15nljn61@corp.supernews.com>
Source record: 17732

I need a small portable device for moving wav files between my home studio and the radio station where I do alot of work. The radio station does not have the equipment I need so portability is important. One option is a laptop PC. Alternatively:

-- I've been thinking about using MD or DAT for capturing full-length audio programs at the station with hopes that I could then *digitally* dump the data into my home studio PC for editing as a wav file.

-- I've been thinking about dumping my PC-edited sounders and other content into a small device (MD, MP3 Player, or DAT) for playback at the station.

I've never used MD, DAT, or MP3 players. Do MD, DAT, and/or MP3 players "dump" to and from a PC easily? Do they offer rapid cueing and start-up? Are they reliable?

Alternatively, are there cheap portable hard-disk recorders that record standard wav files? Thanks for any
insight.

How much are you trying to move? Try CD-R.. you can read those in the CD players at the station, and cut them straight from WAV on your PC.

I would think CD-RW or CD-R would be the way to go on this. There are
portable drives available, although whether or not they're "cheap"
depends on your definition of the term. Mini-disc machines with which
I'm familiar will not dump files to a computer, although Sony makes a
couple of models (which I haven't seen) that let a computer dump files
to the MD.

You won't want to use MP3 if you care about audio quality. The
compression is worse than the ATRAC system used for MD's, and I don't
recommend MD's for music. And you don't want to mix compression
algorithms in any case.

Just my .02 worth.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

Any reason you're ignoring the most obvious answer, CD-R (or CD-RW)?

It would be nice to be able to write directly to MD, but MD drives for computers were only avilable for a brief time in Japan and never in the USA, AFIK. You may or may not like the MD compression artifacts depending on the content of your recordings.

MP3 format is probably not recommended for this application, at least if you want to preserve any commercial quality levels.

DAT is certainly a possibility, but I have never seen any way of directly writing digital audio format to a computer DAT drive. You'd have to export analog or SP-DIF out of the PC and record on a separate DAT deck.

But refurb CD-R drives can be had for $99 last time I checked. And I just bought a new CD-ROM / CD-R / CD-RW drive for around $170. Besides the low cost of the drives (driven by significant and growing volume) , you have the advantage of writing the audio digital format directly from WAV files on your PC. And blank disks are <<50 cents in any decent quantity. And with CR-RW you can erase/overwrite/reuse the disks. And don't forget that most modern CD-R drives will write disks at several multiples of real-time (1X = 150Kb/sec). This is a feature you're not likely to find in any other medium.

And then of course, the best part is that you can play the disks directly on any CD player in the station, etc. without need for any aditional hardware at the station end.

And don't be afraid of refurb equipment. I always buy refurb over new virgin if I have a choice. All the refurbs I've bought came with warranties at least as good as the new ones (in some cases better!) And I figure that the refurb pieces have been individually looked at by a tech on this side of the pond, something you can't say for mass-produced, imported, new stuff.

>enough. Tapes of the station from that visit exist, and those are about all
>that's left of WAQI, I'd guess.

This wouild have been about 6 or 7 years (I believe) before I was part
of that group kicking the proverbial tiles on the station. When we
got there, it had long since gone dark. The building was probably the
same building you visited...off of the main road by about 2 or 3 miles
in a field by itself. The primary reason we didn't pursue it any
further...it would have taken too much to get it back on the air. I
believe most of the equipment was either gone or in disrepair.

Was the absentee owner Arthur W. Cervi? (Current owner of
WVCC-FM/Linesville, PA and the guy we knew...)

No. It is part of why some stations with memorable names have a positioning advantage. Call letters are harder to remember than a name. This is why most products have names rather than sets of meaningless letters and numbers. The top 2 25-54 stations in LA only use calls once an hour as legally required... Others use names, some based on the calls (or the calls were gotten to match the name) such as Kiss, Coast, K-earth, K-Rock, etc. A name creates an image and an expectation. Call letters are like reading the phone book unless you have a heritage set of calls,a nd that only seems to work with 45+ demos.

there's no such thing as a CHEAP HD recorder currently. usually they
will run around the price of a laptop, or more, so you are better off
going with what is previously said here....CDR or CDRW. the main
disadvantage with RW is that you cannot play them in a standard CD
player because they aren't reflective enough to be read, however,
usually are no problem in CDROM drives. I have successfully burned wav
file on my production PC at work to save for future reference because
I needed the drive space, and of course, if I wanted to use the tracks
in something at home.

Mini-disc machines with which
>I'm familiar will not dump files to a computer, although Sony makes a
>couple of models (which I haven't seen) that let a computer dump files
>to the MD.

well.....if you are talking true digital....indeed, you will not be
able to do this....though you can always record in analog into the
drive via the sound card for editing....which I have done on numerous
occasions...

>You won't want to use MP3 if you care about audio quality. The
>compression is worse than the ATRAC system used for MD's, and I don't

>algorithms in any case.

give a choice...yes...don't mix them.....however, mp3, properly
encoded, with the right audio, can hold up quite well in the quality
department. with the move to radio commerical creative delivery via
mp3, the quality is there to go to air with, and it is, but if you can
avoid encoding to mp3 until you have a final product, do so. the
crisper the source file, the better it will hold up to encoding. as
for MD, some material I have encoded has held up quite well when
mp3'd.

FWIW, 75% of Nashville's reasonably-successful stations use slogans,
with the legal calls used only or almost only at legal ID time. 80% if
you don't count WWTN's dropping of the second "W". Except for WWTN, the
ones that do use their calls frequently are the ones with the longest
tenure in their current formats/slogans: WSM (both AM and FM), WLAC,
WSIX.

It's also interesting to note that four stations have had one (or more!)
major format changes and didn't bother to change callsigns. (WKDF,
WGFX, WVRY & simulcaster WBOZ, and WNPL. WGFX and WNPL have both had
three formats under their current calls. WKDF stayed WKDF after
dropping a 20+ - year rock format for country.)

>their online content.

And to some extent, I think the Internet will create its own market from scratch. TV didn't kill stage productions, nor did radio stop people from buying books or reading newspapers. What did happen, however, is that people have only so much time to dedicate to an activity and that time will get chewed up by one form of media or another.

Nobody will be able to show a concrete cause and effect on the sales of recordings, TV viewing, radio listening or whatever. But there will be changes. The only question is what media will receive the lion's share of viewer/surfer/listener/reader time.

Radio will always be around, but I expect it and the other media will change as the Internet augments the content expectations...

3942. Closes soon! [WILL-TV] Station Manager position open

Newsgroup: rec.radio.broadcasting
Date: 2000-09-06 16:44:28 UTC
From: dperry@uiuc.edu
Message-ID: <39b6672e.500764000@news.cso.uiuc.edu>
Source record: 17748
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

STATION MANAGER, WILL-TV
University of Illinois at Urbana-Champaign

THE EMPLOYER: The Division of Broadcasting of the University of Illinois operates public radio and television stations serving much of Illinois and half of Indiana. WILL-TV has been on the air since 1955, and is the local PBS affiliate. WILL-AM, on the air since 1922, is an all-news/information service. WILL-FM, which began in 1941, serves 18,000 square miles with 105,000 watts, and is the most powerful station in Illinois. The Division of Broadcasting is housed in a housed in a new broadcasting facility, and is committed to a policy of encouraging the growth and development of its employees. Although results are important, the working environment is friendly, collegial, and mutually supportive.

THE LOCATION: The University of Illinois is located in the two adjacent cities of Urbana and Champaign, Illinois, which offer the advantages of medium-sized city living (110,000 population), with easy proximity to Chicago (135 miles), St. Louis (175 miles), and Indianapolis (120 miles). The university setting (35,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a full-time, academic-professional position. The Manager of WILL-TV is responsible for all day-to-day activities and operations of the station. He/She reports to the Director of Broadcasting and is a member of the Executive Committee, which involves participation in development of policy at the Division level as well as the usual planning, personnel management and budgeting activities of a station manager. A carefully articulated mission statement guides activities. There are substantial opportunities for personal and professional growth in a stimulating environment-as well as challenges and aspirations, which will both encourage and test that growth.

DESIRED QUALIFICATIONS: A baccalaureate degree is required; a graduate degree is preferred. We seek a person with not less than seven years experience in television broadcasting, not less than three of which is managerial in character. Knowledge of the structure of public and commercial broadcasting is essential, as is the ability to work with PBS, APTS, CPB, other public broadcasting stations, and professionals in the field. The candidate must be a person who has the respect of colleagues at other stations and the ability to represent this licensee well in the national discussion about the future development of the system. Leadership ability, good communication skills, a sense of commitment to the mission of public broadcasting, and an understanding of the role of public television in the context of a university environment are all essential.

SALARY & BENEFITS: A starting salary of not less than $75,000 plus a very generous benefits package-including one month of vacation annually, health insurance, life insurance, disability insurance, choice of three retirement options with an employer contribution, sick leave, opportunities for advanced education, and opportunities for professional growth. The WILL stations offer exceptional employment stability to staff members who conscientiously help us meet our goals, maintain the quality of operations, and accept the responsibilities of our Character and Aspirations Statement.

TO APPLY: Send a complete resume with the names of three professional references to the address below. Receipt of applications will be acknowledged, and should be received by September 15, 2000 for full consideration. The position will be available as soon as possible following a decision by the search committee. Applicants are strongly encouraged to request a packet containing further information before applying. The information packet is available from (and applications should be sent to):

Ms. Marge Moluf
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue
Urbana, IL 61801-2316
Telephone: 217-333-0850

3943. Closes soon! [WILL-AM-FM-TV] Assistant Director for Technology

Newsgroup: rec.radio.broadcasting
Date: 2000-09-06 16:45:06 UTC
From: dperry@uiuc.edu
Message-ID: <39b6677a.500840375@news.cso.uiuc.edu>
Source record: 17749
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

ASSISTANT DIRECTOR FOR TECHNOLOGY

WILL-AM-FM-TV, the public broadcasting stations of the University of Illinois are looking for a very special person:

You have at least five years' experience in broadcast engineering (radio, television, or both). You have a four-year college degree (probably an EE or similar, and you feel secure with computer systems and digital communications applications), and you are still interested in learning. The quality of your work is important to you, and you take pride in what you have accomplished and in your potential for the future. You'd enjoy working in a new broadcasting facility housing both radio and television. You want to work in a progressive organization that respects and values its people, and which will encourage your growth, both as a professional and as a person. You want to grow into an engineering management position with stability, a salary of not less than $50,000, and really great benefits. You'd enjoy living in a college town with a strong advanced technology element, many cultural, sports, and entertainment opportunities, and a high quality of life.

If you are the broadcast engineer we are looking for, we will:
* Start you as assistant director for technology, initially working in the area in which you have the strongest background, supervising six engineers and a team of operators.

* Help you to learn from experienced people even more about AM, FM, and TV broadcast technology, directional AM antenna systems, digital television, digital audio production,internet transmission, and more.

* Teach you the leadership skills that will enable you to function effectively as a key member of our management team and as a part of an organization with a special and successful style.

* Encourage you to interact with professional colleagues at the state and national level, sharing your own expertise and learning from others.

* Put you in a position to assume full responsibility in the future for the technical operations of this 78-year-old AM-FM-TV combination which is still growing.

Call or write for complete information about this position and for a full application package. Direct your inquiry to:

Ms. Marge Moluf
WILL-AM-FM-TV
Campbell Hall for Public Telecommunications
300 N. Goodwin Avenue
Urbana, IL 61801
217-333-0850
E-mail: m-moluf@uiuc.edu

For full consideration, apply before September 15, 2000
The University of Illinois is an equal opportunity employer.

3945. Radio Automation Software

Newsgroup: rec.radio.broadcasting
Date: 2000-09-06 16:53:13 UTC
From: Michael Reimann <mc@mcreim.de>
Message-ID: <8p5rod$as9$16$1@news.t-online.com>
Source record: 17601

Imagine setting up a complete radio automation in a few minutes. Impossible you think? No itï¿½s not. The solution is DRS2006. With the DRS2006 system you can do it all:

- complete music mixing

- setting fades, cue points, intro times

- generate playlists

- insert comericals

- place exact events into your shedule

- analyze your program

- generate html playlists for your web customers

- completely automate your station

- shuffle play

- play all standard digital audio formats on the market (including mp3, mp2, wma etc.)

- of course it is Y2K compliant

And thatï¿½s not all. For the sensational and never before seen on the market price of U$ 549 youï¿½ll also get the 30 deck virtual cart machine. And thatï¿½s still not all. If you expect to buy expensive hardware to do mixing fading and all other things a perfect automation does youï¿½ll only need ONE standard soundcard. Yes you heard right one windows compatible soundcard does it all. Simply listen to it an feel the power of DRS2006.

Youï¿½ll find us on the internet www.drs2006.com.

Or mail us info@drs2006.com.

Greetings

Michael

Something tells me I'm walking right into a troll's trap, but many of you may recognize that link as going to Landover Baptist Church, a parody site that takes some very lethal shots at the mindsets of fundamentalist Christianity. In other words, it ain't real, folks.

Well, Channel 52 IS moving...to Cowboy Tower at Cedar Hill..both 52
and their DTV assignment 51 will be there...they have already started
working on the AC in the bldg for them..

I haven't checked out Boston's ratings, but I believe WBZ, WBCN, and
WEEI are up there at the top of the heap.

While WEEI calls itself "Sports Radio 850 WEEI" and WBCN calls itself
"The Rock of Boston" they ALWAYS tag their call letters with the
moniker.

WBZ is one of those legacy stations which will always be WBZ, I guess.

What's ironic is that radio is infamous for creating hoaxes -- and the
radio pros in here may have fallen for it.

There are cheap portable CD players that play the CDRWs. Phillips is
one of the manufacturers, and there are several others. You just need
to read the package before you buy the player. I've got a Aiwa one that
works great and I think it cost around $50.

Mexican TV network TV Azteca announced today that it has formed a partnership with Pappas Telecasting-- owner of KXTX in Dallas and others-- to start a new Spanish language TV network in the US. The network will be called Azteca America and will draw heavily on the program resources of TV Azteca in Mexico.

This is much the way Univision got started running lots of programs from its Mexican partner Televisa. TV Azteca says it believes it has an advantage by having a network of stations in the Southwest US where most Hispanics are of Mexican origin. They say they can tailor their product better than a network that also has to apeal to Hispanics with roots in Cuba, Puerto Rico, Central America, etc.

>

Honestly, if you have to ask the question, there is not a whole lot I can say that will answer your doubts. The point is simply that a name, when attached to a radio station, is far more personable and memorable than 3 or four letters from the alphabet. Some names give a hint on the type of music, like K-rock. Some produce a lifestyle reaction: KOST in LA sends a message that it is part of the local scene (and geographic descriptors like The River or The Peak do the same in other markets). KISS is easy to remember and seems well accepted in younger demos and makes for a pretty easy match with marketing.

Some names become what the station makes of them. At some point in time, words like Kleenex and Polaroid had no meaning either. But there was a reason Kleenex is Kleenex and not "R-310" or some other hard to remember name.

The idea is to be remembered. An analogy would be the ease of remembering "regular" license plates and vanity plates. It is interesting that, except for the US and Canada, most of the rest of the world pretty much dismisses call letters as useless for station identifiers.

I gather you are truly serious. At first I thought this was all a troll post.

Conditions in Mother Russia before the October Revolution went a little beyond a few listeners disgruntled over safe playlists. You had a quasi-feudal despotic monarchy that was indifferent to extreme poverty and had no concept of human rights. You also had a country that was growing poorer due to its inability to participate in the industrial revolution going on in Eastern Europe.

The Russian situation was less a reaction to "moneyed interests" than the death of feudalism and absolute monarchies. This is the stuff of doctoral dissertations, and I doubt the playlists on Radio Moscow did much to remedy the problem once the Bolsheviks were in power.

> That starts with things like cookie-cutter
> radio.

Now what, exactly, is cookie cutter radio? I'm guessing you refer to the fact that most successful formats have multiple incarnations all over the country. If this is the argument, it is invalid. Most people don't go all over America searching for the "different" radio station no more than people expected a different version and adaptation of Survivor in every TV market. The Adult Contemporary or Classic Rock or Oldies approach that works in one place almost always is the preferred choice in other places, and generally with little adaptation.

>Things like this are like cancer cells: they do a disservice to
> the

Wow. All this over Eminem getting 70 spins a week at the average CHR station?

>Granted, nobody's getting killed by it as long
> as
> it's under control, but a slightly different set of circumstances could
> easily
> change that.

The Radio Revolution. Maybe Harry Turtledove will write an alternative history sci-fi novel about the fall of the US due to short playlists. Or Arthur C. Clarke can write "2001" where a sentient Audio Vault takes over radio programming all over the continent.

Hey, this is fun. The possibilities are endless.

Source record: 17616

OK,

Maybe I did mean to start this multi-threaded drift into esoterica.

When I was in community radio, we really made an impact on the audience in Portland, OR in 1996.

Station was KBOO. Our little show actually showed up on Arbitron as a Saturday night favorite.

We had no money, no fancy gear (at all) and a huge playlist / library.

Blues, Jazz, Rock Zappa - where can't you go in that playground ? We played it all.

late night places had us on, parties were up late with us on, people taped our shows, artists from all over the US called in, labels appreciated us because we made an effort to play everyone we could, even when we didn't totally agree with the artist's style.

WE LET THE AUDIENCE GUIDE US !!!!!! AND WE WON !!!!!!!

I guess in a sort of naive way I refer to the dictatorships on a narrow wavelength (tee hee).
Without getting too deep into atrocities, etc. I'm sure at some point, the general populace in these societies was "guided" into a uniform way of thinking. In time, those not conforming were dealt with in the atrocious ways Rich refers to as quite unlike our socirty today.

... Granted Rich ... Your statements are dead on. But do you really think the analogy is totally foolish ????? Maybe some of us remember the huge volumes of music available to the American public which are never played because a very small insignificantly small, infinitesimally small group of "people" (If indeed they are sapiens sapiens) decide what millions upon millions will (WILL) listen to everyday.

And in a small way, is it not also evidenced when these takeovers occur that people lose jobs ?
Then those in charge are offered a reward (albeit a small one) when they find ways to further
"trim expenses" (OOPPSS, I meant send some chump or chumpette to the soup line).

And what about the "hip" way some stations around the country allow air staff to spew foul language, recommend (by example) poor behavior, and replace abject stupidity with cheap jabs at ladies underpants or something pertaining to testicles. Wow !!! That's pretty cool; dude !!!

More and more the people that wanted to "be there" in the "old" days but never quite had the chutzpah to stand up for what they really believed in are taking charge. Pretend rockers, ersatz cowpokes (maybe they're cowpokers ???) or pokettes, really deep voiced yet somehow totally inane jazz guys and gals. I mean there's just too much of it.

If it were isolated at least to the point of one homogenized station in every city, I wouldn't mind. Maybe the zombie folk need guidance wherever they go. But it's true, man. You used to have hip cats in New York playing cutting egde jazz, hip cats in Atlanta playing all styles of music by all kinds of new artists ------- I know you guys can name a lot of these people who have been relegated to stacking thumbtacks in sanitariums (OH I meant working the board for the next big event .....)

It's not isolated and I just hate it that we can't hear the variety of hit radio that once existed when America was FREEEEEE !!!!!!. Of course now that I think of it that didn't last all that long, really.
Maybe I'm nuts. After all we had just emerged from the white folks finally coming to grips with that Old Black Magic. You know ... when religious leaders urged us not to play that devil music ?????
And some of us realized pat Boone just didn't have Little Richard's (shall we say) charisma ????

Thanks for the opportunity to speak America !!!!! If I'm found face down with a de-feathered peacock or an evil Minnie Mouse puppet stuffed in my nose, you'll know why.

For those interested, the Pappas family is an interesting example of progress by children of immigrants. Mr. Pappas was a recipient of the Ellis Island Medal of Honor award in 1998, I believe.

Here is a bio I spotted which makes it appear that KXTX is in good hands: Harry J. Pappas is the president, chief executive officer and principal owner of Pappas Telecasting Companies and its affiliated companies, which own and manage TV and radio stations throughout the United States. Mr. Pappas began his career in broadcasting at radio station KVEG in Las Vegas, NV. His brother, the station's general manager, hired and trained Harry as a salesman and part-time announcer. At the same time, Harry attended the University of Nevada. In 1964, Harry and his older twin brothers, Mike and Pete, formed Pappas Electronics, Inc., to purchase and operate KGEN, Tulare, CA., a country and western radio station. The Pappas brothers quickly turned the fortunes of that station around and, with some of the earnings from KGEN, built an FM sister station, KBOS.

To fulfill a long held dream, Harry learned all he could about television broadcasting. After a period of study, the brothers applied to the FCC for a new television channel on the Fresno-Visalia, CA., market. The applications were approved and the three men formed Pappas Television, Inc. Stock in the new venture was sold to friends, relatives and business associates, and the station, KMPH, went on the air October 11, 1971. In June 1977, Harry purchased the ownership interests of his brothers in Pappas Television and sold his interests in other commonly owned businesses to his brothers. One year later, Harry purchased all outstanding shares from the founding shareholders, becoming sole stockholder of Pappas Telecasting, Incorporated, licensee of KMPH.

Pappas put his second television station, WHNS, on the air in the Carolinas on April 1, 1984. In its first 90-days of operation, WHNS became on of the highest-ranked independent stations in the country. Then, after seven years of vigorous competition to win the channel, Pappas Telecasting's third independent station, KPTM, Channel 42, signed on April 6, 1986, in Omaha, NE. At the time, Omaha was the largest market in the country without a commercial independent television station. KPTM has been recognized throughout the broadcasting industry as a phenomenal success story. In its

first rating book, KPTM signed on with the highest sign-on audience shares of any UHF independent station startup in the United States.

Pappas Telecasting's holdings now include five FOX Affiliates, seven WB Affiliates, an ABC Affiliate, a Univision Affiliate, two independent stations and permits to construct stations in Wisconsin, Los Angeles, Lexington, Kentucky and Evansville, Indiana. In addition, Pappas owns KMPH FM NewsRadio and KFRE HOT TALK 940 and operates with his sister-in-law, Bessie, KTRB AM in Northern California.

Harry subscribes to the "Four P's" philosophy for success in television broadcasting. The "Four P's" include People, Power, Programming, and Promotion. By hiring the best people, operating his stations with optimum power, providing the best programming, and through constant, consistent and creative promotion, and community service, his stations are among the most successful in the nation.

Mr. Pappas currently serves on the Fox Network Board of Governors. He is a member of the Board of Directors of the National Association of Broadcasters (NAB) and remains very involved in the legislation affecting the broadcast industry. He has testified before Congress and participated in White House Conferences. In 1998, Mr. Pappas received the Ellis Island Medal of Honor.

Mr. Pappas is involved in a number of other business and community service activities, and has received a number of industry and community honors. Harry and Stella established the Greek Community of Fresno Foundation and are establishing a national Foundation for Greek Orthodoxy. Mr. Pappas is an Archon of the Ecumenical Patriarchate , in the order of Saint Andrew the Apostle. He has been named a member of The Archdiocesan Council of the Greek Orthodox Church of America.

Harry and Stella celebrated their 28th wedding anniversary on 1997. KMPH celebrated its 25th anniversary in 1996. Mr. and Mrs. Pappas and their son, Steven, reside in Visalia, California.

The "Roger & Me" award goes to liberal Congressman Bob Filner.
The "Highest Common Denominator" award goes to North County alternative/classic rock station Sets 102.1.
The "Survival of the Witless" award goes to "Jagger & Kristi," afternoon hosts on Star 100.7
The "Always Wear a Condiment" award goes to Delana Bennett, co-host of the "Greg, Delana & Chris" morning show on Magic 92.5.
The "Boys Will Be Girls" award goes to hard-nosed KOGO weekend talk-show host Lynn Harper.
The "Worst Public Relations Move of the Millennium" award goes to North County's pop standards station KSPA, which recently sacked longtime weekend host Doug Best. Letters poured into the North County Times for the past month, blasting KSPA for dropping his radio show because the station programmer didn't believe that the program fit its format (more on that later). Duh!
The "Cool Brittania" award goes to part-time disc jockey "Angel" on The Planet 103.7.

Also: The Joneses aren't keeping up with The Planet as next Monday, Jojo Kincaid becomes the new morning show host. Jojo was a former afternoon host of the defunct Q106 from 1987-93.

Visit Dave's Radio Waves:
http://www.geocities.com/SunsetStrip/4656/indexdrw.htm

Topic: Off-Format Programming

A recent drop of the Doug Best weekend morning radio show on KSPA brings up this question: Does off-format radio programming work anymore?

On a talk station, KFMB, we have a weekly football game courtesy of the San Diego Chargers, which is a huge listener draw. On another news/talk station, KOGO, we have the San Diego Padres which brings in the audience. Whether the sports broadcast listeners are also listeners of the talk formats remains to be seen. Does it benefit the radio station in the other dayparts outside of the sports broadcasts with higher ratings for Rush or Dr. Laura?

KFMB also has the off-format "Hooked On Trivia" airing nightly, and that show gets a lot of listeners looking for some thinking radio programming at night.

Off-format programming such as sports and games may work on a radio station format that is a news/talk station. What about off-format programming for the music formats?

In San Diego, we have Kenny Weissberg spinning his world beat records on his two-hour Sunday night program "Music Without Boundaries" at 8pm. It follows the "House of Blues Hour", which features blues programming that fits the format of Sets 102.1

Channel 93.3, which sucks most of the time playing soundalike R&B crooners and hip-hop and lacking the variety of a real Top 40 station, plays the listenable-but-taped "Digital Groove" Saturday nights at 1am, featuring house mixes and electronica. The top-rated Jammin' Z-90 features a local version to answer "Groove" by relaunching its long-due return of "House of Z" featuring more aggresive hard grooves from 2am-4am.

91X on Sunday nights features the longtime staple "Reggae Mekkossa" at 8pm.

KIOZ, which plays hard rock, has talk in the morning: the aforementioned Howard Stern talker. KGB, which plays outdated and irrevelant classic rock, has the team formerly known as the Dawn Patrol, mostly talking potty humor and other recycled bits. Wonder if their shows are all old?

Star 100.7 features 80's hits all day long for its format of Modern AC, but the 80's hits are decidely slanted towards 91X-lite as opposed to also playing the kind of 80's hits that were big locally on Q106. I'm saying

that their 80's Fridays and blocks are off-format since the fast 80's songs
don't mesh with the Modern AC songs of today.

So, what do you think of off-format programming? If you're a radio
programmer, are they an asset or a short experiment that is better suited
for the Satellite XM niche channels? Voice your opinion on the newsgroups,
or send me an email to letters@davesfunstuff.com

>>
In addition, Pappas owns KMPH FM NewsRadio and KFRE HOT TALK 940 and operates
with his sister-in-law, Bessie, KTRB AM in Northern California.
>>

KFRE was sold several months ago to a Spanish broadcaster.

As part of the terms and conditions, the KFRE call will be abandoned.

The news-talk programming formerly carried on KFRE was transferred to KMPH-FM
and KTRB-AM, with the programming remaining essentially unchanged from the KFRE
days.

The station calls itself "KMPH Fresno/KTRB Modesto".

An application is pending for a very tall (over 200 electrical degrees) 50 kW
ND day tower in the Stockton area, and a new 4-tower night DA (up to 50 kW from
the present 10 kW) in Modesto.

Likely, Pappas decided to exit the Fresno AM market as KMJ will shortly be
going on-air with 50 kW DA-1 on its very low 580 kHz frequency. KMJ is a CBS
(Infinity) facility.

It would take a lot to mistake the Landover Baptist Church website as
a serious newsletter. It's one of the most brilliantly written and
funniest sites I've ever seen on the web.

I'm particularly interested in taking some of Mrs. Betty Bowers'
workshops.

Maybe someone took the televising of Iowa executions seriously because
several real broadcasters had talked about doing just that. It was
clearly a spoof. If you didn't realize it at first, surely the concept
of Iowa not having enough people to kill so they would import them
from Texas should have been a red flag.

Rich would probably argue that he does this too. And in an abstract
sense I think he's right. Somehow, though, I think your's was a more
personal touch. If Rich could package that in to a format, and still
maintain the audience dictated by his business plan, I don't think
he'd hesitate. Unfortunately, the whole concept of a "format"
excludes much of the creative license you had.

Personally, I think "formats" are a mistake forced upon the industry
by super-Heisenbergian excesses of audience polling and market
studies. But that's my humble opinion as a listener.

>I guess in a sort of naive way I refer to the dictatorships on a narrow

Yes, they were guided. When too many media outlets come from too few
places, you're ripe for a form of dictatorship --even if the
underpinnings appear democratic. I don't know that radio alone could
force this situation, however. What you would need would be a
conglomerate of media outlets which stifle any attempt to compete. I
don't think we're there yet (though I agree the current laws seem to
lead in that direction).

What a concept! A digital monica! It would have to alter the basic
premise a bit, since the White House was never accused of
reciprocating. That particular numbered position requires it to work.

At XTRA we used AM69 for a very, very short period. When digital
display radios began to appear it was clear people didn't realize they
had to punch in all the numbers.

People also snickered a little too much.

And view, and read. Have you any idea how many awesome ideas cross my
desk every day. I have an offer (grab it quick or someone will take
it) to do a Dr. Vacuum show about vacuum cleaners. The appeal is that
the show really does suck.

Have you any idea how many people are chomping at the bit to do a TV
sitcom? I have 640 some channels on my digital cable system. I have
the same problem I had when I had only 13. Nothing to watch that's
very interesting. Do you suppose we should just order Time Warner to
give everyone a show? I really hate cookie-cutter TV. I want every
city to have different programming 24 hours a day.

I used to read 6 newspapers a day until I realized that most of the
stuff was taken directly from the wires without even a rewrite. It
saved me a lot of time. I could cut it down to 2. I want every
newspaper to gather its own stories. I'm sure politicians won't mind
another few thousand reporters in Washington.

>And in a small way, is it not also evidenced when these takeovers occur that
>people lose jobs ?
>Then those in charge are offered a reward (albeit a small one) when they
>find ways to further
>"trim expenses" (OOPPSS, I meant send some chump or chumpette to the soup
>line).

Show me an industry that hasn't consolidated. I'm sure there's a group
of telephone operators who used to scoot around on roller skates
plugging in calls that are very angry that mechanical switches were
invented.

>And what about the "hip" way some stations around the country allow air
>staff to spew foul language, recommend (by example) poor behavior, and

>pertaining to testicles. Wow !!! That's pretty cool; dude !!!

It appears to be pretty cool when listeners flock to hear it. It's not my personal taste but it does get numbers. Don't forget that Laurel & Hardy and Charlie Chaplin used brilliance to create material that looked stupid.

>More and more the people that wanted to "be there" in the "old" days but
>never quite had the chutzpah to stand up for what they really believed in

>???) or pokettes, really deep voiced yet somehow totally inane jazz guys and
>gals. I mean there's just too much of it.

I'd get used to it if I were you. When someone actually refers to Kenny G as Jazz I'm ready to go postal. Fortunately, I have enough maturity restrain myself and just put holes in walls.

>If it were isolated at least to the point of one homogenized station in
>every city, I wouldn't mind. Maybe the zombie folk need guidance wherever
>they go. But it's true, man. You used to have hip cats in New York playing
>cutting egde jazz, hip cats in Atlanta playing all styles of music by all
>kinds of new artists -------

There are sill lots of Jazz clubs in New York. I hear music almost everywhere I go. It's in the subway. It's on the streets. It's in the parks. There's a group at Grand Central Station's lower subway platform that pays music of the Andes. There's a guy playing steel drums on the subway platform at 34th Street - Penn Station. Also a very funny guy with those springy alien antennas on his head walking through the trains who promises NOT to play his sax if we give him a donation. I've actually missed my stop just to hear his routine. Another group of guys sing acapella doo-wop as they roam from car to car on the train. They're very good.

So, there's still endless entertainment opportunities in New York. Les Paul still shows up a Iridium to play. Woody Allen joins the diners at Michaels on occasion to play. Chicago Blues is a few blocks from my apartment.

Spend some time in Washington Square park on the weekends and see the incredible parade of street musicians, jugglers and commedians. It's all free, except for any donation you'd like to give.

College stations here do all kinds of specialty music shows. WBGO is a great sounding Jazz station (don't think they've ever played Kenny G) and we have WFMU in East Orange, NJ with a format no one can describe.

>Thanks for the opportunity to speak America !!!!! If I'm found face down
>with a de-feathered peacock or an evil Minnie Mouse puppet stuffed in my

Hello,

I would like to archive steaming audio into a PC

I would like the software to mimic a vcr. It would be recording different programs 24x7

For example "the jane doe show" 12am -6am, "the bob doe show" 6am -10am, and so on.

The purpose is to archive the show and be able to easily pick them out for eventual transfer to CD.

Any advice appreciated.

Thanks.

You tell them Roy! Alan Freed did the samething!!! McClendon did the samething!!! The sad thing is there are those who would rather not invest in creativity, but keep up with the Jones as opposed to being unique. Corporate radio figures if you present only one stale format in a market with no TRUE COMPETITION, then the audience has no choice BUT to tune in. Look over your shoulder, because XM and Sirius may (and hopefully soon) jolt radio back to its 50's -60's era, WHEN THERE WAS PROGRAMMING! We can only pray.

Sirius, by all reports, is going to be an all-music service not unlike the stuff you get on cable.

XM is being programmed by, surprise, radio guys. You may even have heard of some of them.

What XM will offer is more narrowcast formats like the reggae channel and the 50's channel and such. Most of the channels will have commercials, and will be an extension of the radio model. Longer playlists, a little more adventurous, more specific targeting... but a lot like the radio we know without the pressures of winning in the Arbitron. To many, the comparison will be that it is like "regular"radio but better. Remember, XM only projects a few hundred thousand subscribers in the first year... vs. 800 million radios that get "regular" radio.

AM and FM stations will continue. XM, and maybe Sirius, will have their specific market. Nothing much will change. Oh, Sirius ugh starts programming in December or January (they had a satellite problem recently) and XM starts in February. Both have websites you can checkout...XM is at www.xmradio.com.

As to the 50's and 60's, there are a fair number of airchecks online like www.reelradio.com. When I listen to them, I'm embarrassed. I hear the corny echo, the 60 second long jingles, the banal, no content patter... and realize that today's radio is not so bad. I even listened to an aircheck of a station I programmed in the mid 60's that had over a 50 share in evenings... urh. Awful. It was great then, but would be blown out of the water today by the combination of contemporary listener expectations, today's faster-paced life and improved technical and production techniques.

This is not the same Pappas as owns the TV station. The TV station is owned
by the highly regarded Pappas interests form Central California.

The Pappas you speak of is apparently a local restaurant operator. Pappas is
a fairly common Hellenic name.

3977. Tire News

Newsgroup: rec.radio.broadcasting
Date: 2000-09-09 00:09:20 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <39B97F60.11B8@mindspring.com>
Source record: 17633

It's discouraging that nobody asks the right questions about
the tire failure deal.

Now the highway safety bunch wants increased powers and oversight.
Still nobody asks the right question, and the bureaucrats are
piling in because of it.

The right question is, what is the normal failure rate for
tire failure? It can't be zero. So what is it?

If Firestone puts out millions of tires, is the failure rate bigger
than this rate or not? 1000 accidents may be unusually safe for
all I know now.

The second question is, since any the failure rate is not zero,
shouldn't good engineering principles prevent you from designing
a car that rolls over if a tire fails? That is, isn't this Ford's
problem on first principles?

In airplanes, they use redundant systems when a component is critical,
or design it so there isn't a critical component. Otherwise it's
a design failure.

Why is classic rock "outdated and irrelevant"? Maybe it is to some 20
year old who's into Korn and Marilyn Manson or Puff Daddy & DMX, but
not to some 40 year old who grew up with and still likes Lynyrd
Skynyrd, Foreigner, etc. Just remember someday you'll be middle aged
and 20 year olds will laugh at your music as being irrelevant, too.

KGB, with a 4.1 in the last trend, is #10 in the tightly packed SD market;
#1 is just 1.7 points away. More important, in the Spring Arbitron, it was
#4 in the all-important ad target of 25-54 and just a half point away from
#1. According to BIA, in 1999 KGB was # 5 in billing in the market. All in
all, a profile of a very, very relevant and important radio station.

>informercial/religious KTNC-TV 42 Concord CA/San Francisco/Sacremento.

Ah, there goes the English language history of the colorful Channel 42
(which simulcasts on KFWU/8 in Fort Bragg, CA, on the coast). 42 is a
TV "rimshot" into Sacramento but close enough to be a must carry on
cable here.

>Pappas owns Fox KMPH-TV 26 in Fresno and is buying CBS KDBC-TV 4 El Paso.
>Does anyone know if they will flip those?

I doubt very seriously Fox 26 will flip.

> In Fresno, current Telemundo
>affiliate KMSG-59 loses its affiliation on 1/1, and wants to remain
>Spanish-language.

Oddly enough, Telemundo goes to Pappas' KNSO/51 (licensed to Merced).
Maybe a swap back with 59 taking Telemundo again and 51 on the new
network?

Of course, this also leaves Fresno without a WB Network affiliate once
51 flips to Espanol.

>Not mentioned are Reno or Yuma where Pappas owns partial WB outlet KREN-TV
>27 Reno (formally a Univision outlet at one time) or CBS KSWT-13 Yuma.
>Both places would seem logical to launch a Spanish outlet.

27 is likely to change. There is, believe it or not, a cable "WB
Network" outlet in Reno that runs WB programming alongside them. I
don't know why, but I've seen many ads - even billboard ads - and TV
Guide listings for this separate cable channel in the Reno market.
Separate cable channel than 27. It would be an easy switch for Pappas
to flip 27 to the new Spanish-language network.

What needs to be mentioned or questioned here is the possibility or probability that Azteca America will force Telemundo out of Spanish language TV. Telemundo already suffers from ratings that are a small fraction of those of Univision and a dwindling supply of programming. Many industry analysts have suggested that the Telemundo channels are worth more dead than alive and that a sell-off would be more advantageous to shareholders than keeping the net alive; Sony is not known for being particularly patient as an operator. Should make for interesting TV news in that sector as either Telemundo will become better or major changes will happen.

Speaking of 770 WABC and 880 WCBS, I think it's interesting that New York City has stations known as "Sports Radio 66", "Talk Radio 77", and "News Radio 88". 66, 77, 88... and some NYC-area residents can probably hear 990 WZZD, a religious station in Philadelphia. Unfortunately there's no station in the area on 550 kHz to complete the 550, 660, 770, 880, 990 sequence.

The NYC area is also home to a rare "matched frequency" set of AM and FM sister-stations: WPAT Paterson, NJ on 930 AM Stereo and 93.1 FM Stereo. WPAT must have been one of the stations that broadcast in stereo in the '50s by putting one channel on AM and the other on FM. In the '80s they used the moniker "Easy 93" to identify both stations.

And then there's the issue of "dial rounding". Some FM stations still identify themselves as a frequency they're not on... for example 107.9 WEBE in Connecticut, which is "WeBe 108", and also a station on 104.9 FM in Northern California which identifies themselves as "105", plus many others around the nation. One time I even heard a station on *104.7* call themselves "105"!

Speaking of 770 WABC and 880 WCBS, I think it's interesting that New York City has stations known as "Sports Radio 66", "Talk Radio 77", and "News Radio 88". 66, 77, 88 ...
>>

New York has 660, 770 and 880 ... 770 was originally Newark, NJ.

Chicago has 670, 780 and 890 (10 kHz higher than NY) ... 780 was a part-timer until 1946.

If that wasn't enough, NBC used to have 660, 670 and 680.

Westinghouse (now CBS) still has 1010, 1020 and 1030 ... 1010 was added after 1941.

NBC could have had Ch. 4 in Chicago, but it was deleted and moved to Milwaukee and Bloomington (IN) after the merger of ABC (Ch. 7) and Paramount (Ch. 4). NBC (WMAQ-TV) had to settle for Ch. 5.

One comment regarding Yuma: KSWT/13 broadcasts the Telemundo network
during its overnight hours. + Yuma could probably receive the Mexican TV
stations from Mexicali.

The problem revolves around Ford's marketing efforts to induce
relatively unskilled truck drivers (typical car drivers) into purchasing
squirrelly high center-of-gravity SUVs and expecting them to drive them
as if they were cars. In order to lower the COG and soften the ride,
Ford suggests that the owners lower the tire pressure to 20 psig.
Firestone probably wouldn't mind about operating at this lowered
pressure, as this lowers tire lifetimes significantly. As an engineer, I
get riled when reckless marketing folk overrule the engineering functions.

"Creativity","Originality"Local Identification" Those were my points. The programming then was "Fresh","CREATIVE",and above all"Local Identification". Yes, I listen to "Find IT", now and then, and yes sound quality has improved. The overall point was,it was fun, exciting, and again CREATIVE! Today the sound quality is better,but the programming has suffered. Yes, there will be stations with good ratings, but what do you expect when their is no true competition? KZPS,KLUV in Dallas do great,but again they have no True Competition. I still feel the Sirius and co. will coerce radio back to its heritage.

Wow! I can hardly wait until radio is _coerced_ back to its "heritage".
Just what part of its heritage would you like radio to revive? Oh, I know:
CREATIVITY! That'll be swell. Won't it be great to have Lux Radio Theater,
The Shadow, The Voice of Firestone, Our Miss Brooks and all the rest back on
the air. And don't forget the dramas and documentaries of Orson Wells and
Norman Corwin. Now _those_ were the days of creativity.

Sirius, do your stuff! Oh my, I see I've made a mistake. This isn't the
kind of creativity you were writing about. You were writing about creative
_DJ's_. Yeah, they are the REAL heritage of radio--all of it. How could I
have been so silly? Sorry.

Best

You have great points in all your replies ....

BUT ......

I performed an experiment - undocumented, at my own cost. I went to various places around the country asking folks what their various opinions were on (some) major issues we face today. One of the main problems is media presentations. Radio most often was described as "stale".

Now, I'm an entrpreneur Rich. I've succeeded and failed enough to know now what works and what doesn't. I also know that small business while protected by law cannot survive the lawless murder by attrition that big money is perpetrating on the American public.

Senseless slaughter of people's dreams;
manipulation through attrition of what society will listen to if they participate in the "daily grind". (Your point of 600+ television stations versus 13 is very well stated.)

More and more I just don't know what people are talking about when they mention certain characters on television programs. These people are nice enough and well mannered but they have accepted the decisions made by corporate programming that this is what America wants. So they get terrible scripting, etc ..... sounds like you know.

If I don't keep up with this marvelous information, I am branded a "geek". I must work on computers, read books for continued education and recreation and otherwise pursue a "leftist" lifetsyle. Oh yeah I listen to music and have a ponytail.

Increasingly, I find a backwards glance or some indication of disbelief that the information being discussed is unknown to me. Remember Star Trek episode involving hooded characters with seemingly empty tubes that assured societal conformity to the teachings of Lando (or something like that).

The originality, spontanaeity, and creativity are being sucked out of radio in the same way a parasite sucks the life away from an unwilling host.

You are probably right Rich .... every and anytime someone stands against unfair practices, treachery, lies and deceit - he or she does it alone. In the late sixties, I hired blacks in the deep south for office jobs or other work requiring an intelligent, thinking person without hesitation. I was branded as communist, etc ..... Three men cornered me inquiring why I was so concerned about these "creatures".

Well ... a few good men and women stood up to this mentatlity and things have improved.

Why is it (now) when I speak with upper management about content, news reporting I am merely "accomodated" ? Having been allowed to state my point I am politely dismissed with a reminder ...
"This is what the people want".

Why is it I go to the street and find people hate it but "It's all they have to listen to" eventually they tune in to hear news, weather and whatever mish mash is being re-hashed at that particular time.

There is a disparity here. I am simply trying to get corporate people to tell the truth.

The truth is :

Like ancient Egypt, Rome and Greece, medieval Europe, the industrial revolution

We (corporate radio) are here to MAKE ALL THE MONEY WE CAN

We don't really care about what you (multiplied by millions) "little" people want.

We've got millions behind us; money and people that is .... SO you must be nuts when you ask for "content with meaning"

We'll keep those millions because we're going to shower "them" with abject stupidity,
filthy behavior and provide the rationalization necessary to justify mistreatment of your fellow
human being.

It's all about money.

AND FINALLY .... We're going to kill public radio and TV. We've already convinced them that a "corporate" outlook is BETTER. And ... we've managed to get commercials on your silly little public TV and radio. Soon, those frequencies will be ours !!!!!!!!! Then we'll show you how to walk, talk, reproduce ...

This is all I ask.......... Tell me to my face, in front of the masses that, in the end, whether an idea is good or not doesn't matter. The bottom line IS what matters.

Female breasts instead of female intelligence. Not bad eh fellas ? Huge muscular idiots instead of Jacob Brownowski ... getting interested girls ??? Young, barely teen-aged children being displayed and romanticized as sex objects (no worry to keep this one behind closed doors anymore)
Some brand of "lite" (not even a legitimate spelling) beer, two ZZ Top tunes played all night
Murders, death, destruction, THAT"S NEWS !!!

ENOUGH !

I know change is coming. It is already here.

And ..... we have media manipulation tools like no other time in history. Manipulation of what the people hear and how it is presented is absolutely where Hitler, Stalin, etc started their reign(s) of terror.

we're moving there right now Rich.

Deny it, buy it. You'll die with it .

NOT ME.

WB has it's own cable channel in the Monterey Bay Area also KMWB-17.
Funny there is *no* blackout periods with KBWB-20 in S.F.

It's on the TCI/ATT systems.

3993. TOM TOM CLUB Live on Joe Kelley's Upper Room

Newsgroup: rec.radio.broadcasting
Date: 2000-09-09 17:32:51 UTC
From: eastwestdj@aol.com
Message-ID: <20000909132342.23444.00000919@ng-fi1.aol.com>
Source record: 17650

*****PRESS RELEASE for immediate attention*******

TOM TOM CLUB to appear live in-house on the Upper Room with Joe Kelley

The Upper Room with Joe Kelley
WVOF 88.5 FM Fairfield, Connecticut
Fairfield University
Monday Sept. 11th, 2000 4pm-8pm
LIVE webcast: www.fairfield.edu/media/live
Request Line (203) 254-4111

TINA WEYMOUTH & CHRIS FRANTZ, of the Tom Tom Club, will appearing live in-house on the Upper Room with Joe Kelley on Sept. 11th from 4-8 pm on 88.5 WVOF FM. They will debut their upcoming CD, The Good, The Bad, and the Funky which is scheduled for release on Sept. 12th on RykoPalm. This lastest TOM TOM CLUB Cd showcases funk, reggae, r&b, dance and pop songs that have already garnered rave reviews from music circles. The Tom Tom Club will embark on an extended tour this October. Their recent Bowery Ballroom concert in NYC previewed the the exciting show the Tom Tom Club has put together. Go to www.tomtomclub.com for all the latest info.

TINA WEYMOUTH and CHRIS FRANTZ, are two of the most highly respected musicians in the music business. They were founding members of Talking Heads. The Talking Heads put out innovative records throughout the 70s and 80s and their live shows took the music to a higher level. The Talkings Heads live concert film, Stop Making Sense, has been lauded as one of the top rock and roll concert films of all-time. In the early 80s, Tina and Chris formed the Tom Tom Club as an avenue to express their funk and reggae interests. Their smash dance hit, Genius of Love, still remains as fresh as ever. Mariah Carey sampled the song for her hit, Fantasy. Tina Weymouth is one of the top bassists in the music industry. VH-1 named her one of the top 100 females in rock and roll. Chris Frantz drumming skills are incomparable. His funky rythyms have been used on several artists releases. Weymouth and Frantz have worked and recorded with David Byrne, Jerry Harrison, Bernie Worrell, Steve Scales, Debbie Harry, Michael Hutchence and many other fine musicians.

The Upper Room with JOE KELLEY is heard on 88.5 WVOF FM in Fairfield CT on Mondays from 4pm-8pm EST. The show has been on WVOF since 1991 and Joe Kelley has been in radio broadcasting since 1982. The show mixes funk, jazz, r&b, and blues. In addition, Joe Kelley interviews many standout musical artists. Recent interviews have included Victor Wooten, Bernie Worrell, Kat Dyson, Jellybean Johnson and Monte Moir of the Time, Taja Sevelle, St. Paul Peterson, Garry Shider of P-Funk, Brian Torff and Rod McGaha. In addition, Joe Kelley hosts an in-house concert series with national and local musicians. This series has been hugely successful. Finally, he heavily supports the live music scene and records some of his shows from the fine musical venues in southwestern

Connecticut.

Obviously you missed the point. If radio went back to live dramas,etc,that would be interesting. Hell a good represenetation of former radio listeners in vehicles listen to 'audio books". So one more time,as satellite radio makes an in road into , radio listenership, radio must adapt. In adapting it must return to the "McClendon","Drake" style of programming,and letting stations be more localized in creativity. In the the late 60's, "they" laughed at cable. Now "they" program to compete with cable AND SATELLITE.

>Telemundo will become better or major changes will happen.

Telemundo has a limited presence here in Sacramento. They were on
K47DQ, a translator for KSTS/San Jose (with other translators in
Stockton/Modesto), and for a while Sacramento Cable - now Comcast -
even carried this signal. (Comcast dropped it for the "GEMS"
Spanish-language cable channel. They still carry full-power Univision
O&O KUVS/19, which is a must-carry in this market...)

Now, Telemundo is on KCSO-LP/34, a new LPTVer up in the foothills
above the Stockton area, directional down into the Sacramento market.
After 34 got up and running, KSTS dropped the feed to K47DQ, and put
up a slide informing Sacramento viewers that they could find Telemundo
on KCSO-LP. That slide may still be up today.

At least in this market, Univision is WAY UP HERE and Telemundo is way
down there. 34 seems to be a scrappy operator and is actually
programming a local newscast (on an LPTVer!!) and even has billboards
in the Hispanic-dominant areas of the Sacramento market. But
Univision 19 is an O&O, a full power station, and just moved into a
sparkling new building across from Sacramento's Arden Fair Mall a year
or so ago.

Ray, in the mid-60's there was a cry all over the country that the Drake-style stations with limited talk and short, punchy jingles and short, short playlists was devoid of localism, destructive to talent and constituted a "cookie-cutter" formula for stations from Boston to Tulsa to LA. Previously unfettered jocks thought that Drake was killing personality radio and quashing creativity.

Today, you think Drake was the epitome of localism and creativity. The more things change...

Back when FM was still fighting with AM radio to be the king of the Top-40 hill, Tom Merriman and the folks at TM were producing Tomorrow Radio.

These were highly produced radio shows that accompanied demo reels for their jingles. Tomorrow Radio was a look at where radio was headed, and its predictions remain accurate even today.

We've already seen so many of its prophesies come true, from the breakup of AT&T, KHJ going country, and the first indecent exposure by picturephone. We call them webcams and its damn near a national industry.

Where Merriman and the visionaries at TM saw this business going, is toward narrowcasting. You had a "template" that acted as a filter on a big information stream. You heard the music you wanted, the stories you were interested in, and the sports scores and sports news for the sports you follow.

The change that TM may have missed, is how tecnology-smart the average consumer would become as this kind of technology bubbled up in the listener-base. It probably won't be radio that delivers this kind of service, but the service is the natural progression of the way we're increasingly wired.

Radio's biggest problem in tomorrow's world, is its a narrowbandwidth modulation scheme in a broadbandwidth world. If it changes its ways and goes some form of digital, it loses the very installed base that makes it powerful; if it doesn't, it fades away against competing delivery schemes.

I think audio-only services do have a future, but analog terrestrial radio is going to be adrift in such a sea of connectivity, even wireless connectivity, in the next 10 years, that the concept of a little real-time analog signal with no indexing, isn't going to cut it.

Broadcasters have gone the wrong way. They've built juke-boxes that in many cases are less sophisticated than power users have in their

laptops. They've eliminated the people who added value to music, or who localized their service. Now, even if the money were there, they don't have the staffs to produce the kind of material that elevates them above Windows Media Player.

Terrestrial analog radio faces some really tough choices in the next 10 years, and I am very happy that I won't be called upon to help make them.

Don't know what is going on with the station, but where they had local origination all the way to 11 PM, now they are doing the satellite thing. Further, they had news people live during all dayparts and during the evening. The locally originated talk vanished after 9am a couple of years ago with the arrival of Dr Laura. The only local stuff these days is the morning drive time show and 4-8pm split between semi-humorous talk and sports. A big downturn for what had been a fairly interesting station.

The cutbacks in the news department have been very significant. Now, there is no local news on weekends or after the afternoon drive time. The liners still sound like it is supposed to be "Charlotte's news", but clearly CNN and CBS have little to do with Charlotte.

Having heard what they offered one person to do an evening talk show (3 hours) 5 days a week, I was a tad shocked... $35K a year isn't enough to get an apartment here and live, much less live comfortably.

Adding to their misery, they no longer are the anchor for the Panthers, that having been taken by WRFX (who originates the John Boy and Billy program). With that, they also lost one of the better sports voices in the area.

Sad.

Makes me wonder if Jefferson Pilot is preparing the station for a sale.

>I need a small portable device for moving wav files between my home studio
>and the radio station where I do alot of work<snippage>

I use Flashpath. Flashpath is a 1 inch square, wafer thin memory chip that comes in sizes from 2 mb to 64 mb (maybe more).
Flashpath fits into a caddy that looks like a floppy disc and it inserts in the floppy drive of your PC. It reads it just like a 64 mb floppy disc.
If I have a particularly large file, I will convert it to MP3 for transport..
If you have large files and don't want to convert to MP3 , another option is to get a CDR burner. The cost of blank CDR's has fallen below 50 cents each and continues to fall. Of course the cheapest way is to email them to yourself at work, but that's only practical is you have a high speed connection at home and work.

We have a station in Boston - WRKO - that was at one time a major 'talker' - Jerry Williams, Gene Burns, Tom Leykis (before his syndication days), but when the stations ratings started to dip, they went satellite gasbag during the day. No big salaries to put out, but then again they might be pulling in more with Dr. Laura and Rush Limbaugh.

On the other hand, the WFAN copycat in Boston, WEEI - tried to do a "mirror image" of that New York station; but it had to be localized -- goodbye to Imus, and more local sports reporters - more substance, less shtick.

so on.

Well, assuming the Does actually produce steaming audio, here
are some thoughts.

The sound editor that most likely came with your sound card
records to WAV format. Very easy to edit, amenable to VCR-like
controls, but, except at a very muddy bitrate, takes up far too
much disk space for long archival recording. At CD quality,
similar to CD encoding, maybe 10 meg a minute, a little over an
hour on a CD disk.

You need software to compress on the fly, and your three
plausible encoding choices will be MP3, RealAudio, and Windows
Media (wma).

MP3 promises near-cd quality at roughly a meg a minute, maybe
10 hours on a CD. While you can probably find freeware to convert
from Wav to MP3, I think you can expect to pay for software to
encode MP3 on the fly, such as Cool Edit, I think $69. I don't
know what the editing/segmenting capabilities would be, but they
must call it Cool Edit for a reason.

The huge advantage of MP3 is that some newer car CD's and
home DVD's read and play it from PC disks.

The Windows Media Encoder offers even deeper compression than
MP3, and is a free download from Microsoft.com. Decent FM
mono-ish encoding comes in at roughly 6.5 minutes a meg, for a
staggering 70 or so hours of the Does on a CD that costs 80
cents, stacks on a spool at 15 or 20 per inch and is rewritable.
But the encoder is not VCR-like and does not include an editing
capability, and third-party software and playback on devices
other than PCs require license payments to Microsoft.

RealAudio offers deep compression also, but would seem to
have the disadvantages of the other two without the virtues.

That's my barebones knowledge; I hope others chime in.

4009. KXL Portland going sports

Newsgroup: rec.radio.broadcasting
Date: 2000-09-10 17:14:59 UTC
From: Richard Crowley <rcrowley@xprt.net>
Message-ID: <FDEJILKADBILFMFBBBHHMEOBCAAA.rcrowley@xprt.net>
Source record: 17515

KXL, 50Kw in Portland, OR at 750 KHz was for >15 years the leading news/talk station in the market (at least IMHO, the ratings may have indicated that more people are interested in listening to music of various flavors.)

Last year Paul Allen (billionaire co-founder of Microsoft and owner of the only major league team in town, the NBA Trailblazers) bought KXL AM&FM, one of the few remaining independently owned stations in town.

Although we in the public heard about the competition between 2-3 stations for the Blazers broadcast rights for the coming few seasons, it came as little surprise to hear that KXL had won the contract.

KXL had already signed up to carry the U of Oregon football and basketball games, and since Allen's takeover, they now also carry his NFL team from Seattle.

Between morning and evening drivetime news, they had two good local hosts doing talk shows. Unfortunately, they sacked one of them and moved a couple second-rate comics from their Sunday afternoon fill-in to the noon-4pm slot. Dave&Dwight (aka Dumb&Dumber to their detractors) attempt a very painful mix of "humor" and talk. Unfortunately, they aren't ready for prime time. I hope KXL isn't spending much on them.

They they dumped all the evening talk shows: Bruce Williams; then Leykis; then John & Ken (I thought they were bad untill I heard D&D); then Victoria Taft (local); then Clark Howard and Dr. Joy Browne. Now we have Eric Ross who attempts to do a sports talk show for three hours every night. Even though he throws out what I would have thought were controversial sports topics and takes the opposition position on things, I have never heard more than 3 calls in an hour show. I listened for several weeks for the same reason people slow down on the highway to look at a wreck. It was just fascinating that this guy would get 3 hours on a 50Kw station in a major city.

Since I am not a sports fan, I'm pissed off at all the shows KXL has dumped. Now I have to go searching for shows here and there. If I had a better internet connection I could hear Dr. Joy and Joey Reynolds from wor710.com.

Oh well, nothing good lasts forever. Thanks for letting me vent.

4010. San Diego c. 1960

Newsgroup: rec.radio.broadcasting
Date: 2000-09-10 19:19:39 UTC
From: Richard Crowley <rcrowley@xprt.net>
Message-ID: <FDEJILKADBILFMFBBBHHCEODCAAA.rcrowley@xprt.net>
Source record: 17516

When I was a kid living in San Diego (early 1960s), I built a crystal set and listened regularly to KFMB AM (at 540KHz before Mexico took the channel back). The transmitter was up at the top of the hill in the residential district where we lived. I remember listening to Geoff Edwards (who apparently later moved to Los Angeles and did TV as well). He did an eveneng DJ show which he claimed was broadcast from "the grotto, 17 1/2 feet beneath the surface of the ground". However, when I finally bugged my parents into taking me to see the station, it was nothing of the sort!

I was most impressed with the clock which was kept accurate by some arrangement with Western Union (?). I remember how satisfying it was to see the second hand hit the 12 straight up as the bong from CBS News came in over the network. To this day I am a CBS radio fan and always set my watch to the network sounder.

But I also remember Don Ross who did some interesting features (in the manner of Charles Osgood) and also did the "Don Ross / Geoff Edwards" show. I looked in the www.440.com data, but couldn't find Don Ross anywhere. Anybody know anything about him?

I also remember visiting the transmitter of KGB where the shiny transmitter racks were around the periphery of a gigantic room (at least to my kid POV). And I remember the six towers. They must have had a strange pattern to support. I looked them up in the FCC database, but there is no record for KGB AM are they still around?

I also remember visiting the transmitter site of KSDO in Mission Valley. They had a sort of studio along one wall of a large room and they were running the station from there on the evening I visited. I don't know if that was the main studio, or just the secondary / standby / evening studio since the transmitters had to be attended and monitored / logged in those days. I remember that they had a 10 1/2 inch reel of harp arpeggios which would automatically roll whenever the announcer turned on the studio mic so they would have this "heavenly background music" under the announcer. I believe they played light classics or MOR in those days. Apparently talk radio now.

Not radio, but I remember also visiting KOGO, ch 10 (NBC) which was in the slow process of putting in color equipment. I remember that Regis Philbin did a saturday night local variety show (long before the days of SNL).

Richard, now in Portland

By all reports? Check P7 of Sirius's 1999 annual report.
It's to be commercial free, personality hosted, music radio.
Latin team is Gabe Romero, Mark Bejarano, Lino Igesias. Jazz is
Kenny Washington and Russ Davis. I wish XM well as a
stockholder, but as a listener I find their planned lineup
markedly inferior.

Must be WB city. Since KNTV-11 San Jose has been simulcasting the prime
time WB programming (as it waits to become the Bay Area's NBC affiliate),
the WB prime time is cleared on 3 channels.

For over twenty years, KSTP-FM/Mpls.-St. Paul has been known as KS95 even though they're at 94.5, which is about as "94" as you can get. It has never seemed to have hindered anyone from finding them, though. Maybe the original idea was a loudness war sort of byproduct or other. Pitch the music *and* the frequency!

Imagine the fun if St. Paul's religious KNOF/95.3 would ever consider a "KF95" - or even KF94" - moniker just to stir the pot.

With more and more stations crowding the FM band, there may come a time when stations that ID their frequencies in such broad terms may decide to become more precise. Then again, if they've successfully established a well-known brand around a rounded off frequency, what's the harm?

>>
When I was a kid living in San Diego (early 1960s), I built a crystal set and listened regularly to KFMB AM (at 540KHz before Mexico took the channel back).
>>

Mexico didn't have 540 to take back.

540 was a Canadian Clear, issued to Canada exclusively.

In accordance with NARBA, KFMB was a Class II-B on 540, as it was located "... at least 650 miles from any point on the U.S.-Canadian border ..." (see Part 73 for details).

In 1955, Mexico was given a Class I-A priority on 540, as part of the (separate) U.S.-Mexican agreement, the only known case of two Class I-As on the same frequency (there are a few cases of Class I-As and co-channel Class I-Bs, see 640 and 690 for examples).

This required that KFMB abandon 540, for which the FCC awarded KFMB unlimited time operation on 760 with 5 kW DA-N, the same facilities it had when on 540.

KFMB, in accordance with "Rio" applied for and was granted 50 kW DA-N, but because of 740 in Avalon, KFMB must operate with 5 kW from LSR to LSS and with 50 kW DA-N from LSS to LSR

Yes. 980 AM and 101.3 FM. There weren't many digital tuners around, and no one would have mistaken religious 100.3/WCTS for WYOO.

I'm assuming that it was the FM you DXed in NJ, as the 5 kW AM ran - and still runs - a DA-1 pattern to the NNE. The FM had horrible coverage in '75, so that would have been a better catch than many local listeners would have had.

Most readers here aren't in Atlanta so I'll enlighten them as to the format... a "Mix" format. The best of the 70's, 80's yada yada yada.... More whitebread than Wonder Bread. Safer than your momma's arms. Sharp as a bowling ball.

As far as the signal not reaching Griffin, you're actually about 65-70 miles from the tower which is in Canton, Georgia. About the max for most FM stations without a better than average antenna/receiver.

themselves
> "105"!

Dial position rounding was fairly useful into he days of mechanical dials
with traveling pointers. Rounding was as precise as was necessary due to the
inaccuracies of dials. Remember the "OK-102 and a half" identifiers? Today,
with digital displays being so common, there is a risk of mistuning with
rounded positions, particularly in markets with a lot of rimshots and
closely spaced facilities. To use "107" in LA would make 107.1, 107.5 and
107.9 all eligible for ratings credit.

The harm comes form the ever-increasing number of digital radios. When dials
were mechanical, approximation worked. It does not now.

What do the changes made by a very independent owner in Portland have to do with deregulation? KXL is simply trying to improve its position in the market. Paul Allen may be rich, but he is truly an independent broadcaster with none of the agenda of the large consolidators.

KXL a heritage station? As I recall it was a beautiful music AM daytimer into the 80's and only became a station of any significance in recent years. Heritage to most of us is a title fitting the 70 and 80 year old stations that have maintained ratings and service. Not a station that became more powerful and went fulltime precisely due to deregulation allowing the expansion of stains on the Clear Channels!

Over the last 4 years, KXL has only once hit a 3. 9, and that was in 1997.
KEX, by contrast, has been in the high 4's and low to mid 5's all that time.
KXL has averaged about 7th or 8th in the market while KEX has been in the
top 5 many times. KXL has also been around 7th in billing fairly
consistently.

And people working for radio stations should NOT object to things we feel will hurt our profession with no possible benefit? Ugly "corporate radio" has given many of us, for the first time, some chance of retirement benefits beyond Social Security, opportunity for same-company growth and relief to some extent from the U-Haul frequent users program. Pardon us for wanting a bit more security and better benefits.

>This is more
> a matter of FREEDOM and the RIGHTS of Americans to make CHOICES!" I

I'm really skeptical of this statement. Particularly since around 60% of the LPFM applications are from religious groups... many of the same sort that have brought us thousands of translators all over the country giving no local service.

And the figure is way over 60% when you look at the applications that have any technical possibility of progressing.

Just exactly what kind of non-corporate radio do you expect from this sort of LPFM licensee?

> his kind now.

Ray, it would be really helpful if you configured your newsreader to cite the post you are responding to. I'm only assuming you are citing my comments in regards to the influences of Bill Drake.

Bill did not do a station in Dallas, as far as I can remember. The closest, I think, was KAKC with Scott Seagraves as PD in Tulsa. There were rip-offs, of course... all over the country. At that time "my local area" was the entire US. As I was working outside the US, whenever something interesting developed, I hopped a plane (through the wonders of trade) and listened. I made 8 or ten such visits to "happening"spots a year through the 60's. What I can tell you from the KHJ/KRLA/KFWB battle in LA is that the fluffy, talkative Top 40 of the late 50's and early 60's was decimated by the Drake approach which was much more focused, tight and seamless. To be done well, and a point most miss, the talent had to be extremely good to put content into just a few seconds of opportunity. The result was that there were many small market operators who thought that the "Drake Format" was simply "more music" with jocks with liner cards. They also forgot that Drake got the RKO stations to substantially cut the spot load to make a real competitive statement.

Still, the Drake approach was one of a competitive strategy that capitalized on the excessive personality and talk, long stopsets, longer playlists and the un-hip jingles and such of existing top 40's, MacLendon included. As usual, less talk and more music when properly done will have major impact.

MacLendon was a different creature. He was in many instances more of a promoter than a programmer. The stations were good, but the promotion was fabulous. He lucked onto the idea of all music formats, after a series of near-fatal failures at KLIF, when he emulated the music policies of KOWH in Omaha and added his promotional bombast to the formula. There is a book about Gordon by Ronald Garay, done as a thesis in Lubbock or somewhere like Lubbock (Odessa? Amarillo?), that is interesting if overly laden with "scholarly" footnotes and sidetracking expeditions. It is worth reading and is available form Amazon. Gordon's style was wonderful as radio broke from the program mode and moved to the format mode; he declined as the FM era hit him and the bag of promotional gimmicks ran thin.

I visited KLIF, and then KNUS, many times in the 70's (as anyone doing jingles did) and found that the sparkle was pretty tarnished by then. I also visited KABL in San Francisco, and used it as a model for a beautiful

music station I built. KABL had both atmosphere and a promotional flair and was very "San Francisco" on the surface but very formulaic on the inside. I also watched the early all-news efforts in LA with XETRA and the innovative but unsuccessful all classifieds station on FM. An aside to the XETRA story is that Gordon apparently heard a Cuban all-news station, one that had been around since the 30's, and thought the idea would be viable in the US. He was right, but the laws regarding broadcasting form the US on a Mexican signal ultimately did him in. Gordon picked up on good ideas, but also picked up on as many bad ones. He was very successful introducing Top 40 to Dallas, SA, Houston, El Paso, Louisville and such; he was sometimes less successful in running the operations for the long haul, particularly when faced with big competition.

Gordon is not what radio needs now. The problems are different. There are as many as 25 or 30 signals in many of the medium markets and fragmentation is brutal. There are competitors form new delivery systems and hundreds of channels of content on TV and the internet. Gordon worked best when stations could get big double-digit shares. We are in narrowcasting mode now and the model is different. As Rich said, there are hundreds of channels and not enough good content. The problem is talent, not channels. The problem is entertainment, not consolidation.

Okay I was being serviced by Top Hits USA (Radio Programming Management) for my music and have since discontinued it due to the cost compared to the actual decent amount of music. Other than them and Promo Only does anyone know of any good music services that send all of the Top 40 Mainstream/Rthymic Music that is decent ?a

Look at the service provided by Radio Express, Inc. out of Burbank, CA. Radio Express is operated by Tom Rounds, one of the founders of American Top 40.

The RadioPlay service sends a weekly CD in a variety of formats. Go to http://www.radioexpress.com and click on the RadioPlay link and check it out. It is less expensive than the TM Century HitDisk service and very up to the moment with the latest releases.

4035. D.C. Radio Watch / Wash. Post article on Satellite Radio, 9/10/20 00

Newsgroup: rec.radio.broadcasting
Date: 2000-09-11 05:19:52 UTC
From: Max Cacas <MCacas@freedomforum.org>
Message-ID: <9BA8EA456304D311BD800008C7918566015A3C95@mailsrv.freedomforum.org>
Source record: 17541

The Washington Post's radio columnist ("The Radio Listener") Frank Ahrens has written a pretty complete article on the coming satellite radio industry in the Sunday (9/10/2000) paper's Business section. For the next week or so, you should be able to find it online at:

http://washingtonpost.com/wp-dyn/articles/A42652-2000Sep9.html

After this, I believe you pay a nominal sum to get it out of their archive online.

Its probably about as good a write up on this as I have seen yet, and discusses the whole business about no local news/weather/traffic, and the potential impact on existing "terrestrial" radio (hmmm, guess that's a term we'll all have to get used to soon...I've been calling it "over-the-air" radio all this time). And after reading some of the comments regarding radio drama/theater in some other threads, I was happy to read in this article that Sirius, at least, is working on some sci-fi related radio dramas featuring the voices of some top named stars.

Best quote from Ahren's article is this, and I put it out here specifically for those who blindly defend the 'status quo' in American radio (i.e., the Clear Channels and Viacom/Infinitys of the world who are making buckets of money, and who *refuse* to see a problem looming), to wit:

"Even though commercial radio is enjoying boom times--billing a record $17 billion last year, with ad sales continuing to rise around the country--a growing minority of radio listeners are increasingly weary of the commercial-rich, repetitive playlists offered up on their car and home radios."

Amen, Frank. Amen.

Cheers,
- Max

Hey all:

I am in the market for a Sennheiser MKH 816, with Rycote zep. If anyone has an extra one hanging around gathering dust, let me know. I'm looking

for a deal.

Let me know, soon!

Thanks,

Rob

4037. re: "Future of Radio" discussions

Newsgroup: rec.radio.broadcasting
Date: 2000-09-11 06:19:25 UTC
From: Max Cacas <MCacas@freedomforum.org>
Message-ID: <9BA8EA456304D311BD800008C7918566015A3C99@mailsrv.freedomforum.org>
Source record: 17543

After posting up the link (and some of my own comments) on the Wash. Post article on Satellite Radio in this Sunday's paper, I also thought about the on-going threads I've been reading about the "future of radio"...and thought I'd offer some of my own ruminations.

We've had this discussion many, many, *many* times on this list. Hell, good old Bill, God rest his soul, used to look forward to them when they surfaced, about every year. It seems to be an evergreen. But its more important and vital than ever, now that satellite radio is on the horizon, perhaps the first *real* competition over-the-air radio has had since, well, the advent of television.

My general feeling is that the way things will work out will inevitably fall somewhere between the blatant apologists ("nothing is wrong, we're making money hand over fist right now, all is calm"), and those who make *empty* statements like "the Internet is going to be the death of radio". Neither side seems to look back at history, and see its never as good or as bad as everyone would seem to paint the future.

- Radio did not kill newspapers. It didn't.
- Television did not kill radio, or newspapers. It did not. (Ted Turner arrogantly claimed that CNN and cable would kill off newspapers when he started his 24-hour cable news service. He was wrong.)
- The Internet has not killed newspapers. (Bill Gates made the same arrogant claim that the 'Net would kill newspapers that Turner did, and Gates did this at a time when he barely understood the Internet. He was wrong.)

Newspapers are doing as well as ever, and will likely become the content providers for those surviving Internet news sources after the Drudges of the world are out of the 'news' business, and instead, are picking up the day's refuse.

New technology *never* has killed the old. The old simply adapts...if it can...which leads me to my other point.

Jerry Trowbridge, in his post recalling TM's very precient "Tomorrow Radio" presentation of the mid-70s, said:

>Broadcasters have gone the wrong way. They've built juke-boxes that in
>many cases are less sophisticated than power users have in their
>laptops. They've eliminated the people who added value to music, or
>who localized their service. Now, even if the money were there, they
>don't have the staffs to produce the kind of material that elevates
>them above Windows Media Player.

Jerry hit it right over the head (thank you, Jerry!), and this is why the apologists from the NAB have it wrong when they say everything is fine, our

billing is higher than ever, etc., etc. Terrestrial/over-the-air radio might have had its chance if it had 'stuck to the knitting', and stayed "local and live".

Instead, you have station after station playing the same thing town to town, or even within a market.

You see a business where consolidation and "clusters" have become more important than localism and public service. ("Clusters" only serve the Clear Channels and Viacom/CBS/Infinitys of the world, no one else.)

You see one dark control room after another where computers have replaced people; the ones who are left voice-track a "show" to be dumped onto a computer;s hard disk, where the announcer probably never gets to hear the music he/she is introducing, and where the voice-tracked program is followed by 12 hours of something coming in from the satellite in a studio thousands of miles away. And then the defenders of the status quo have the nerve to complain that "we just can't get good talent anymore"?

And forget about local news, they say gleefully, we got rid of *that* arcane requirement years ago, and its perfectly all right for the burden of delivering the news on radio to fall on the only all-news station in town (if there is a station in the big markets), or the public radio station. The only thing we care about anymore is "traffic and weather". Or so they claim.

Besides, <cynical mode on> Metro is *so* much cheaper than having to hire someone to do the news. Who cares if the licencee of a radio station palms off its editorial control over the news to a 'vendor'? Certainly not the listeners... And of course, they can always get some news reader willing to giggle like Robin Quivers at the latest stupid thing the voice-tracked morning show team will say, of course...<cynical mode off>

So, where is this all going? As I said, the future hasn't been written yet. I don't believe the "_(fill in the blank new technology)___ is gonna kill _(the fill in the blank old technology__" crowd anymore than I believe the "all is well" crowd. And I think that's how most thinking people feel.

I think I'm gonna just be like everybody else, and wait and see what happens. Meanwhile, I'm gonna price one of those dish TVs to replace my increasingly inferior cable TV service, and keep my eye out for a retro-fit AM/FM/satellite radio to give me more choices in my Honda when the time comes.

Thanks for listening. And, by the way, I'm speaking for myself, and no one else, including my employer. Anyone who doesn't understand that never will.

Source record: 17544

I only have a moment tonight, given the time and the wealth of commentary that Max has added.

I'm quite in agreement with his viewpoint, and would only add one comment now.

I'm using the term "terrestrial Radio" since, in the interest of disclosure, I'm involved with the XM project. And I'm also involved with old-regular-AM/FM-radio. Things will change. And one of the reasons why satellite radio will change is the lack of a need to satisfy the very precise requirements of Arbitron. Most stations in rated markets program for diarykeepers, not listeners. This is a fact that drives the business side of radio: getting people to write you down correctly. And getting people to not go away. And getting people to never spot a negative.

Satellite radio offers 100 channels on a captive, one service only, receiver. If you go away, so what. You still pay the $9.95 a month. You have many choices. They want you to enjoy many of them. That is the idea. And the idea is very different form terrestrial radio which is all about being inoffensive so as to not lose quarter hours.

There is a different dynamic, a different system and a captive audience. An unrated captive audience to a great extent.

If anyone is at fault for "safe" or so-called "corporate radio" it is the advertisers and their messenger, the ratings services. Stations are not at fault for looking for the best ways to look good in the ratings as to do otherwise would be to fail. However, not everyone is a diarykeeper... and some of these new alternatives will serve disaffected batches of them. As Max mentions, satellites will not kill terrestrial radio. Just as the current deadly fallout on the net shows that there is a lot more hype there than reality. All the pieces will eventually fit together, once we use the same scale of magnification on each one. Right now, we just don't know the proportions. But we do know that terrestrial radio is advertiser driven and thus fits the model determined by the survey methodology.

If there is blame to be placed, look elsewhere than station owners. Oh, and remember that the "great stations" of the 50's and 60's were not rated by Arbitron. Hooper and Pulse, anyone?
